Dollar dip big topic in Tokyo

Thoughts of 90 yen worry auto leaders

By Mary Ann Maskery and Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTERS

TOKYO — The latest in automotive high technology was the star of the Tokyo auto show. But most executives were preoccupied with the bad news on world financial markets and dire forecasts of what will come next.

Analyst Ron Glantz, Montgomery Securities, set the stage at the international meeting of auto analysts held here on the eve of the show by forecasting "90 by '90." Glantz expects the dollar, which fell to 137.5 yen to the dollar last week, to collapse still further — to 90 yen by 1990.

Japanese automotive leaders were quick to counter that prediction, saying they doubted it would happen.

Nissan Executive Vice President Tetsuo Arakawa spoke for many: "That is almost beyond the imagination." But, he added, Nissan could still survive in the United States.

Masanao Ueda, Mitsubishi executive vice president for international business, said, "I think 90 yen would be impossible for us." Next summer would be "too soon" for 115 yen, but the company could manage 115 by 1990, he said.

Toyota President Shoichiro Toyoda said he doubts the dollar would suddenly drop to 90 or even 100 yen. If that happened over a 10-year period, the company could work out measures to cope with it, he said. But if there was a very, very sudden large drop, "we could not cope with it."

see SHOW, page 44

Show cars starred at Tokyo. None was more cutesy than the Suzuki Jo-Car, top. A production version of the Daihatsu Buggy, above, may be near. Mazda's MX-04, above right, is a modular concept. Chassis is in the background. Nissan Jura, right, may be a glimpse of the minivan being developed with Ford.

GM diesel engine unit put on block

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors will restructure its Detroit Diesel Allison Division, most likely by selling off a portion of its engine operations, according to company insiders.

Industry sources said Detroit Diesel's money-losing engine operations have been up for sale for some time. GM insiders said the company wants to retain the profitable Allison transmission part of Detroit Diesel's business.

A strong contender to purchase at least a portion of Detroit Diesel's engine business is Penske Corp., according to GM insiders.

Reportedly, there also has been a management-led buyout proposal.

Ludvik F. Koci, Detroit Diesel Allison general manager, declined to comment on interested parties or their proposals, saying only that the company is down to "just a few" alternatives.

Koci declined to comment on the Penske offer. Without confirming or denying the management buyout proposal, he said, "It's certainly not one of the front-runners."

A spokesman for Penske Corp. acknowledged that Roger Penske had received a prospectus from Salomon Brothers, New York.

Koci said Detroit Diesel had hired Salomon Brothers to evaluate various purchase proposals and "equity sales and venture" proposals it received from both inside and outside the diesel industry after its joint-venture deal with Deere & Co. fell through in March.

Salomon Brothers was also engaged to "help us with the government" in preparing for "filing for changes of ownership," Koci added.

"We understand that (the prospectus) has been given to several parties. We are still evaluating it, and would not like to comment until we have completed our studies," the Penske spokesman said.

Koci said GM is close to a final decision and that he anticipates it will come by December.

"I personally expected it to be finished a month ago," he said of the company's decision.

Penske Corp., Red Bank, N.J., has a Detroit Diesel distributorship, Penske Power, for northern New Jersey and metro New York. Penske

LANCE GRAVES

Makers assess crash effect

Sales forecasts, production schedules still unsettled

AN AUTOMOTIVE NEWS STAFF ROUNDUP

Manufacturers and importers in the United States last week were taking a wait-and-see attitude before adjusting their 1988 sales forecasts and production schedules to reflect gyrations on Wall Street and in the world's other financial markets.

But most auto analysts downgraded their U.S. sales forecasts by nearly one million units from their original 1988 forecasts. Likewise, they downscaled their forecasts for domestic and offshore production headed for the United States to keep in step with weaker sales projections.

Dealers in the United States last week reported slower showroom traffic, although they didn't blame it all on the stock market crisis.

Most auto executives said they expect lower auto sales simply because the volatile market jolted consumer confidence. However, they said they will wait to see how serious the effect really is before they adjust sales forecasts, production schedules and marketing strategies.

General Motors Chairman Roger B. Smith said the company has not officially downgraded its 1988 sales forecast. However, he said sales likely will be closer to 15.0 million units — 10.0 million cars and 5.0 million trucks — instead of the 15 million-plus GM had previously predicted.

Smith said the company will wait for the next consumer confidence poll before making any moves. He noted that the economy continues to be strong.

Resurrected Rouge to turn first profit in

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Rouge Steel Co., the steel-making subsidiary of Ford Motor Co., expects to turn a profit next year for the first time in a decade.

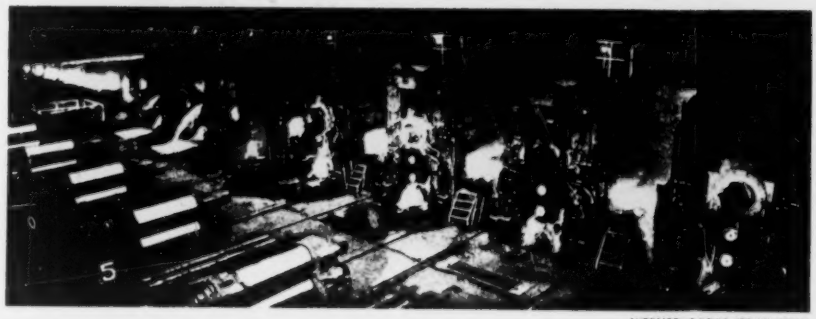
As indicated by the company's earnings record, the last 10 years have been difficult ones for Rouge. The era has been marked by questions over a possible sale and the survival of the U.S. steel industry itself.

Now, behind some new investments and a new management team, Rouge is again talking about the business of making steel — and beating the competition.

"We're turning the corner," said President David Blackwell, who came to Dearborn from Bethlehem Steel late last year. "Our plans are to be the best."

Blackwell cited two big steps in the comeback: a new labor contract and a series of investments aimed at increasing efficiency and improving the product.

The labor agreement reached this summer includes a wage freeze, a no-strike clause and commitments to further modernize. Rouge has received investments of $200 million in recent years, and last month Ford announced another $100 million in scheduled improvements.



AUTOMOTIVE NEWS/JOE WILSSENS

Strip mill will benefit from computerized thickness controls — part of the improvement program

Beyond those changes, much work still needs to be done, Blackwell suggested. Costs need to be cut, employee teamwork has to be fostered and relationships with suppliers still must be improved, he said.

The company also will continue to diversify to lessen its dependence on the auto industry. In the past, as much as 90 percent of its output was sold to Ford; now that figure is closer

Profits rise 38% on slim sales gain

By Michelle Krebs, Mary Connelly and Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Third-quarter profits for the Big 3 automakers turned out to be better than expected.

Combined earnings for Chrysler Corp., Ford Motor Co. and General Motors totaled $1.8 billion for the July-to-September quarter, up 38 percent from $1.3 billion in the third quarter of 1986.

Combined sales for the quarter amounted to $44.0 billion, up 4 percent from $42.4 billion in the year-ago period.

Analysts had predicted Ford earnings would be about even with or slightly more than the previous year's third quarter. Chrysler, they predicted, would have earnings about even with or slightly less than a year ago, and GM would have much lower earnings than in the previous year.

Actually, Ford and Chrysler posted slightly higher third-quarter profits. But GM reported earnings significantly higher than a year ago. The reason: GM instituted accounting changes that improved its results in the third quarter instead of the fourth, as most analysts had expected.

The accounting change enabled GM to report higher earnings than Ford for the first time since the first quarter of 1986.

For the first nine months of 1987, the Big 3 automakers combined earned $7.4 billion, up 21 percent from the $6.1 billion earned in the first nine months of 1986. Sales for the nine months totaled $146.9 billion, up 5 percent from $140.4 billion in the corresponding 1986 period.

Incentive p just keep c

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — New incentive programs continue to flourish, with Pontiac and Chrysler Motors beefing up their efforts to boost sales of 1988 models and clear the lots of remaining 1986 and 1987 cars and trucks.

Audi of America, meanwhile, announced a dealer-incentive program for its 1987 4000 series.

Pontiac announced last week that it is adding selected 1987 cars in its multimillion-dollar direct-mail rebate program aimed at Pontiac owners and owners of competitive makes.

Coupon holders will receive $400 rebates on 1987 and 1988 Firebirds, 6000s and Bonnevilles and $300 on 1987 and 1988 Fieros and Sunbirds. The original program included only 1988 models. There is no dealer participation cost.

The division began mailing coupons to 3 million owners of Pontiac cars purchased between 1977 and 1986 and 3 million to 3.5 million owners of competitive makes.

In addition, the division has mailed coupons to 500,000 persons who said in a national marketing survey that they were planning to purchase a car during the next six months.

Chrysler Motors is offering incentives to dealers and salespeople on 1986, 1987 and selected 1988 Jeep and Renault products to clear out inventories for the launch of the Jeep/Eagle franchise in December.

"They inherited these (American Motors) products and they want to move them out," said one Jeep-Eagle dealer.

Dealers receive cash back when they reach specific sales targets set for 1986 and 1987 Alliance and Encore and 1987 GTA models. The dealer receives a total of $500 if he sells 1 or 2 of those cars, $750 for 3 or 4, and $1,000 for five units. Incentives for additional units are based on the same formula.

The program applies to units sold between Oct. 1 and Dec. 31. Consumers must purchase the car from dealer stock and take retail delivery before Dec. 31. There is no consumer incentive on any Jeep or Renault products.

Chrysler to close plant; Toledo spared

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors will close one vehicle assembly plant in 1988, but it will not be the Toledo, Ohio, Jeep assembly plant acquired with its purchase of American Motors.

"You have to look at the capacity numbers and our product lineup and you know that we could do without a plant or a plant and a half," said Chrysler Corp. Chairman Lee Iacocca at a press conference last week.

Chrysler removed the Toledo plant from the danger list following announcement Thursday of a tentative contract agreement with the Jeep unit of UAW Local 12.

The tentative contract, which will be voted on by the 5,800 unionized Toledo workers Nov. 9, is a five-year agreement expiring Sept. 14, 1992. It includes a moratorium on closing the plant for the life of the agreement.

Iacocca said the company may decide by the end of the year which plant to idle. The plant will not be sold, he said.

Chrysler Motors Chairman

Greenwald said no plants "jump out at us" as likely candidates because "we are selling very well all of our products."

"Our manufacturing guys are very good at giving us some flexibility," Greenwald said. "If the market is beginning to weaken, maybe we can find a way . . . to build in two plants what we have always built in three and move some products around.

"That's what we are trying to think our way through. As a result, it isn't simply saying there is a plant, and it is going to close in three months. We may do some retooling and get some existing product ready for another plant."

Following Chrysler's acquisition of AMC in August, analysts suggested that one of AMC's aging plants in Toledo or Kenosha, Wis., might be vulnerable.

VW moves ahead of Fiat to lead Europe's car-sales race

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Volkswagen AG moved past Fiat Auto to take first place in Western Europe car sales for the January-September period.

After finishing as Europe's sales leader in 1985-86, the Volkswagen group has assumed the top ranking for the first time this year, according to industry sales estimates compiled by Automotive News.

The surge to No. 1 has been largely on the strength of Audi and Seat, whose combined sales have increased nearly 30 percent this year.

Industrywide Western European sales in the January-September period totaled 9,458,200, 5.7 percent higher than in the same period last year.

Most auto executives here were expecting Western Europe to surpass 12 million units this year for the first time in history, but they are reviewing expectations in the wake of the stock market crisis of the past two weeks.

Among Europe's six major manufacturers, Peugeot SA achieved the largest growth in sales and market share during the first nine months. Only General Motors lost market share.

Sales by Japanese manufacturers were up fractionally through the third quarter, but market share was off. Japanese makers in September suffered their first year-to-year monthly decline since April.

Besides GM, Mercedes-Benz, Austin Rover, Volvo and BMW all lost market share in Western Europe for the nine-month period. However, only BMW dropped in actual unit sales.

VW-Audi-Seat sales were calculated at 1,412,000 through September — a 14.9 percent market share in Western Europe. The Volkswagen brand was up only 1.6 percent to 963,100, but Audi with its enormously popular new 80/90 compact was up 28.1 percent to 262,200 and Seat improved 32.3 percent to 186,700.

The VW group improved its first-place position by capturing nearly 30 percent of the West German domestic market. Overall new-car sales have recovered in West Germany after a slump earlier this year that resulted in VW falling from first place in sales in Europe.

Fiat Auto, which includes Alfa Romeo and Lancia, held 14.4 percent through September with sales of 1,365,000.

Fiat has continued its hold 60 percent of the Italian market and has pushed ahead of Peugeot SA in West Germany to take first place among non-German producers in that market.

Ford follows at 1,148,500, up 8.3 percent from 1986 and good for 12.1 percent of the European market. Ford has strengthened its grip on first place in the United Kingdom, increasing its share to nearly 29 percent compared with just over 27 percent last year.

Peugeot SA has made the largest jump in unit sales and market share of all European car groups. The French automaker was up 10.5 percent through the first nine months to 1,101,700. The increase gave the company an 11.6 percent share compared with 11.1 percent through the same period in 1986.

Its Citroen unit was up 15.4 percent across Europe to 430,500 units. Citroen, through September, improved sales 17 percent in its French home market and 35 percent in the United Kingdom.

GM has under-performed in the European market this year and has suffered a decline in market share. Sales through the third quarter were 1,022,500 — 1.9 percent higher than the first nine months of 1986 — while share declined from 11.2 percent to 10.8 percent.

In the United Kingdom, GM sales were off 6 percent in an overall market that has grown by 6 percent this year. GM is also down in France and in the Netherlands, where it is the market leader.

Renault sales through September rose 7.6 percent to 965,200, good for 10.2 percent of the European market. Renault has maintained a 30 percent market share at home, slightly behind Peugeot SA.

Among other European manufacturers, only BMW suffered a sales decline in 1987. The German company has seen unit volume drop 3.2 percent to 224,500, while its European-wide share has declined from 2.6 percent in 1986 to 2.4 percent this year.

BMW is down in France, Italy and in its home market. According to official registration figures in West Germany, BMW was off 2.1 percent to 108,228 in the first nine months. Three-series sales in Germany were 9.5 percent lower and 5-series registrations were down 2.2 percent, offsetting a better than threefold gain for the new 7 series.

After several months of growth following a sharp January-February sales decline, Japanese manufacturers were off 2.3 percent in September. For the first nine months, Japanese makers combined held 11.5 percent of the European market (1,083,700 units), down from 12.1 percent for the same period in 1986.

Nissan held the No. 1 position among Japanese marques in Europe with a 3 percent improvement in sales to 282,400, good for 3 percent of the entire market. Toyota, which has declined marginally in Europe this year, was second with a 2.8 percent share.

West Germany was Europe's largest national market, improving 3.1 percent to 2,189,400 through September. Sales sputtered early this year but have recovered and are now running ahead of last year's record 2.8 million pace. However, some analysts here expect a fourth-quarter slowdown.

The United Kingdom was up 6.2 percent to 1,637,100 and may be on course to top 2 million sales for the first time. Italy is also approaching its first 2-million sales year. Volume through September was 1,535,000, 8.8 percent higher than 1986.

The French market was up 6.5 percent to 1,452,300 units for the year, but was off 10 percent in September and appears likely to fall short of its own bid for 2 million sales.

Spain remains the hottest national market in Europe. Sales in September rose 15.5 percent over the previous September when the current boom was already well under way. Spanish new-car sales for the nine-month period grew 41.1 percent to 674,700. Volume this year could top 900,000.

PROFITS

FROM PAGE 3

CHRYSLER CORP.

Chrysler Corp. reported an 8-ercent increase in third-quarter arnings compared to one year ago, record third-quarter sales.

Third-quarter profits totaled 253.0 million, up from $234.9 mil-on earned in the year-ago third uarter.

On a per-share basis, Chrysler rned $1.15 in the quarter, com-ared with $1.06 a year ago, ad-sted for a three-for-two stock lit in March.

Sales of $6.2 billion set a record r the third quarter and were up percent from $5.2 billion in the ear-ago quarter.

Worldwide factory sales for the uarter were 494,398, including 9,041 Jeep-Eagle vehicles sold nce Aug. 6. Chrysler acquired merican Motors Aug. 5 and mar-ets the former AMC vehicles hrough the Jeep-Eagle network.

Despite the inclusion of AMC roducts, Chrysler unit sales still ere lower than a year ago when orldwide sales amounted to 502,-52 units.

For the first nine months of the ear, Chrysler earned $951.4 mil-n, down 12 percent from $1.08 illion earned in the same period a ear ago.

For the nine months, earnings mounted to $4.38 a share, down rom $4.83 a share for the first nine onths of 1986. Chrysler's 1986 arnings included a gain of $131.9 illion from the sale of its stake in eugeot.

Sales rose 12 percent in the ine-month period. Chrysler re-orted sales of $18.6 billion in the rst nine months of 1987, com-ared with $16.6 billion in the first ine months of 1986.

Worldwide factory sales for the ine-month period were 1,622,522 nits, including 49,041 Jeep-Eagle ehicles. That was off 1 percent rom year-ago sales.

Chrysler Corp. Chairman Lee acocca said the quarterly gain in earnings was posted despite an industrywide car sales slump, a strike against Chrysler Canada, costly product launches and the completion of three acquisitions during the period.

Robert S. Miller, Chrysler Corp. vice chairman, said AMC made "a modest contribution" to Chrysler's profits in the third quarter. On an earnings-per-share basis, he said, the impact of the AMC purchase was "a wash" because AMC's modest profit was offset by the stock that was issued in connection with the purchase.

Chrysler Financial Corp. reported the highest third-quarter and nine-month earnings in company history.

Chrysler Financial said 1987 third-quarter net earnings were $55.3 million, up 14 percent from the $48.3 million earned in the third quarter of 1986. The nine-month net earnings were $177.2 million, a 32-percent increase over the $133.8 million recorded in the comparable nine-month period of 1986.

Chrysler Credit, the automotive finance subsidiary of Chrysler Financial, financed or leased 234,632 new and used vehicles in the United States during the third quarter. Chrysler Credit financed 34 percent of the new vehicles sold by Chrysler Motors dealers.

Chrysler Financial's earnings increase was attributed to improved productivity and higher earning assets from its automotive and diversified finance units.

FORD MOTOR CO.

Ford reported that third-quarter profits increased 1 percent over the same quarter a year ago on a 6-percent sales gain, setting new third-quarter records for sales and earnings. It also pushed profits for the first nine months of the year above 1986's full-year earnings.

Profits in the third quarter rose to $703.2 million, or $2.76 a share, from $693.3 million, or $2.61 per share, a year earlier.

Worldwide dollar sales were $15.2 billion, or $881 million higher than 1986's third quarter, even though factory unit sales declined 7 percent to 1,239,000 units from 1,334,775.

The company said that third-quarter net income was up $112 million, or 19 percent, compared with the same period in 1986 without the one-time gain in 1986 of $102 million due to the sales of Ford's North American paint operations and Ford Aerospace & Communications Corp.'s interest in Starnet Corp.

For the first nine months of the year, Ford earned $3.7 billion, or $14.34 per share, up 48 percent over the $2.5 billion, or $9.33 per share, for the same period in 1986.

Sales for the first nine months totaled $52.9 billion, up 14 percent from $46.5 billion for the first nine months in 1986.

In the United States, Ford earned $593 million in the third quarter, down $14 million from last year. Outside the United States, Ford earned $110 million compared with $86 million a year ago.

Ford's U.S. car share in the 1987-model year was 20.1 percent, the highest since 1979 and up 2.3 percentage points from 1986 — the largest gain in the United States for any manufacturer, domestic or foreign.

Its truck share was 28.5 percent in the 1987 model year, up 0.3 of a percentage point from last year.

Overseas, Ford of Europe's estimated car-market share for the first nine months of 1987 was 12.3 percent, an increase of 0.3 of a percentage point from a year ago.

Ford's estimated truck share in Europe through September was 10.9 percent, up 1.4 percentage points from last year.

Ford Motor Credit Co. posted a third-quarter profit of $172.3 million, representing a $16.8 million gain, or 11 percent increase, from the same period in 1986.

Profits for the first nine months of 1987 were a record $560.7 million compared with the previous record of $448.3 million established in the same period in 1986.

During the first nine months of 1987, the company financed 1.58 million vehicles in the United States, up from 1.45 million financed in the first nine months of 1986. Ford Credit arranged financing for 41 percent of all new Ford Motor Co. cars and trucks sold by its dealers in the United States.

At Sept. 30, Ford Credit assets were $48.7 billion, up $9.7 billion or 25 percent from a year ago.

GENERAL MOTORS

GM reported a third-quarter profit of $812.3 million, a 135-percent increase over the $345.1 million earned in the year-ago quarter.

Sales for the quarter totaled $22.6 billion, down 1 percent from last year's $22.8 billion. Worldwide factory sales in the third quarter were down about 10 percent at 1.64 million units.

On a per-share basis, third-quarter profits amounted to $2.28, compared with 80 cents in the 1986 third quarter.

Though GM showed operating income of $356.8 million, it was not from selling cars and trucks but rather from bookkeeping changes.

GM said it adopted during the quarter accounting practices that made more realistic assumptions regarding the useful lives of its plants, equipment and special tools. The modifications favorably impacted GM's pre-tax earnings by $894 million, or $1.82 per share.

Without the changes, GM earn- about double 1986's third-quarter operating loss of $251.5 million.

GM earnings for the first nine months totaled $2.7 billion, up 4 percent from $2.6 billion earned in the first nine months of 1986. On a per-share basis, GM earned $7.70 in the period, compared with $7.24 a year ago.

Sales for the period totaled $75.4 billion, a 2-percent decline from sales of $77.3 billion a year ago. Worldwide factory sales were off about 12 percent at 5,792,000 units.

GM's subsidiaries also helped boost the automaker's third-quarter profits.

General Motors Acceptance Corp. had earnings of $325.0 million for the third quarter, compared with $313.7 million earned in the same period a year earlier.

While GMAC's earnings for the quarter rose 4 percent, the phenomenal rate of growth that GMAC has experienced in recent years is slowing, as anticipated. Higher interest rates during the quarter narrowed the margins between what GMAC pays to borrow money and what it charges customers to borrow.

GMAC Chairman John Edman said narrower margins were partially offset by changes in depreciation rules on lease vehicles. That change increased third-quarter earnings by $65 million and nine-month earnings by $198 million. Had it not been for the change in depreciation rules, GMAC would have earned less money in the 1987 third quarter than it did in the year-ago quarter.

For the nine-month period, GMAC earnings totaled $1.2 billion, up 35 percent from the year-ago's $888.9 million.

GMAC financed or leased 862,-000 vehicles in the United States and 132,000 in other countries during the quarter.

GM Hughes Electronic Corp., GM's subsidiary made up primarily of Hughes Aircraft and Delco Electronics, reported third-quarter net income of $134.0 million, an increase of 6 percent from $126.4 million a year ago.

Earnings, excluding the goodwill paid by GM for Hughes Aircraft, amounted to $171.2 million in the quarter, compared with $163.6 million in the 1986 quarter. On a per-share basis, GMHE earned 85 cents compared with 82 cents.

Sales for the quarter totaled $2.52 billion, down 1 percent from $2.55 billion. Of the total, sales to GM amounted to $663.8 million in the quarter, down from $708.5 milion a year ago.

For the first nine months, the subsidiary reported net income of $412.8 million, up 10 percent from $375.6 million. Income excluding goodwill for the period amounted to $524.4 million, compared with $487.2 million in the year-ago period.

Sales for the period totaled $7.82 billion, off about 1 percent from 1986's $7.86 billion. Of the total, sales to GM amounted to $2.35 billion in the period, just off from $2.38 billion a year ago.

Electronic Data Systems Corp., GM's computer services subsidiary, reported net income of $82.3 million for the quarter, a 16-percent increase from $71.1 million in the year-ago quarter. On a per-share basis, that amounted to 68 cents in the quarter compared with 58 cents a year ago.

Sales for the quarter totaled $1.13 billion, down 3 percent from $1.16 billion in the 1986 quarter. EDS attributed the sales decline to the fact that two major projects for GM have been completed. Sales to

Americans traveled more in '86; miles increased 13%, Hertz says

NEW YORK — Hertz Corp. estimates that in 1986 the average adult American traveled 15,258 miles, or 41.8 miles a day, at a cost of $5,251. The mileage included commuting, business, vacation and personal trips. Approximately 92 percent of the miles were by car or truck.

The study, Mobile America, is the fourth annual nationwide survey by Hertz. Costs include transportation and any required away-from-home food or lodging.

The nationwide mileage total was 3.65 trillion miles with an aggregate cost of $1.26 trillion. In 1985, it was 3.2 trillion miles at a cost of $1.05 trillion with each person averaging 13,476 miles, or 36.9 miles daily, at a cost of $4,406 per person.

The annual survey covers nearly all forms of transportation — trains, trucks, taxis, autos, airplanes, ships, buses and walking. The estimates also include family shopping and other incidental local trips. Personal boating and private flying are omitted, however.

The poll's distances refer to passenger miles rather than vehicle miles. Highlights of the 1986 survey include:

- Commuting: Some 110 million persons commuted an average 26.1 miles (round-trip) a day at an annual cost of $1,817 per person. In 1985 the cost was $1,355 a person.
- Business trips: Work required 47.2 million employees to take an average of 44.6 trips. Transportation costs averaged $2,930 each. In 1985, the cost was $2,448 each.

Cars and trucks accounted for nearly 75 percent of business-trip mileage, and commercial aircraft were used for 24 percent. Trains, buses and other conveyances accounted for the rest.

- Pleasure trips: Last year, 138.1 million adult Americans took an average of five vacation or pleasure journeys — from weekends to two weeks or more. Vacation travel totaled 1.155 trillion miles, up from 906 billion in 1985. Average transportation costs per person for those trips were $966 in 1986, up from $835 in 1985.

Jaguar, Porsche hard hit as European auto shares dive

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Porsche and Jaguar, the two European automakers most dependent on the United States market, suffered major setbacks on the Frankfurt and London stock exchanges last week.

Uncertainty about the U.S. economy and the continued fall of the dollar against local currencies hurt all European makers with substantial American sales. Daimler-Benz, BMW, Volkswagen, Saab and Volvo also declined sharply last week. Fiat and Peugeot continued their slide to a slightly lesser degree last week.

Steven Reitman, auto industry analyst at Phillips & Drew in London, said he may trim earnings projections for the major exporters, but does not view the situation as cataclysmic.

"It is far too early to say that the (U.S. import) market is dead," said Reitman. "As it was, the German companies' plans for the U.S. market were quite conservative relative to 1986 sales."

Most analysts see a continuation of plans to sell more expensive mixes in the United States, a strategy that was already being implemented across the board.

Porsche and Jaguar each ship nearly 60 percent of their output to the United States, and their share prices proved highly sensitive to currency fluctuations last week.

Porsche shares lost 21 percent of their value on Tuesday alone and then continued to fall as the week progressed. Through early Friday, Porsche shares in Frankfurt had declined more than 32 percent in less than two weeks and were down 41 percent from their high for the year.

But Jaguar prices have fallen by far the most of any European maker since the stock market slide began Oct. 19. By midweek, shares had tumbled to 286 pence, exactly half the price at the start of trading on Black Monday nine days earlier. Jaguar stock had edged upward slightly through early Friday.

BMW, selling about 22 percent of its output in the United States, declined 30 percent in less than two weeks. Volkswagen and Volvo shares were down 29 percent, and Daimler, Saab and Fiat lost 26 percent of share value during that period. Peugeot, which sells less than one percent of production in the United States, fell 21 percent since Oct. 19.

Hans-Peter Wodnick, an automotive analyst at the Bank in Liechtenstein in Frankfurt, said that with the exception of Porsche, the German automotive stocks largely followed overall Frankfurt market trends late last week.

Wodnick said he is considering changes in earnings projections for German manufacturers.

The timing of the West German government's planned sale of its 16 percent stake in VW will almost certainly be affected by the volatile market. Finance Minister Gerhard Stoltenberg said early in the week that the sale would continue, though he did not reveal timing. By late in the week various reports from Bonn indicated that the government had decided to shelve its plan to sell its VW holdings to the public before the end of the year.

VW's decision to cancel investor presentations throughout Germany — including a press session here in Frankfurt — touched off further speculation that the stock sale has been put off.

The VW share price fell 10 percent last Wednesday after it was reported that state prosecutors are investigating new evidence of further illegal currency transactions. The new findings reportedly could result in additional losses beyond the 473-million-mark fraud-related losses already incurred.

Toyota and Honda report no change in plans

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Honda North America President Tetsuo Chino said Honda dealerships are reporting sales as usual without any apparent effect from the stock market crash.

Chino said the company has no plans to change any production or sales goals at this time: "It is just too early."

Toyota President Shoichiro Toyoda said "we are just observing to see the trend." Toyoda said the company is not changing any plans either.

Toyoda said there are no signs coming out of Japan's economy that would lead to a recession. He did acknowledge, however, that the movement in the world stock markets could dampen consumer buying and that would affect auto sales.

But Toyoda said he is not nervous: "It will not do to become nervous. We must be calm."

Both Honda and Toyota are having no difficulty selling cars in the U.S. market. Problems other than market reaction may affect production and sales of other Japanese makers. Reports in Japan indicate the Ministry of International Trade and Industry may be planning to reduce its quota of 2.3 million car exports to the United States. However, such a cutback would help companies that are struggling to meet the current quotas save face.

In the past two weeks, the values of auto stocks have dropped along with everything else. Automakers are waiting for the market to settle.

Analyst Maryann Keller, Furman Selz Mager Dietz & Birney, said that auto shares do not usually turn up until the market has bottomed out.

CRASH

FROM PAGE 1

Ford Motor Co. said it is reviewing its forecast.

Chrysler Chairman Lee Iacocca said 1988 sales should be off no more than 10 percent from 1987, but he added that's no guarantee they won't be. The company has not revised its official forecast.

Both Smith and Iacocca said production cuts are possible in the fourth quarter and beyond. Iacocca said Chrysler will wait to see sales for the first two November periods before making such cuts.

European importers in the United States — perhaps most vulnerable of any segment because their upscale models are purchased by the same affluent customers who buy stocks — last week reported some order cancellations but said this was not widespread.

Although the dollar continued to slump against the yen and mark, stock prices rallied in heavy trading late last week. The Dow Jones Industrial Average rebounded nearly 200 points from its nadir of 1738.74 on Black Monday, Oct. 19, to 1938.33 on Oct. 29.

The Dow's recovery of 11.48 percent from Black Monday was almost mirrored in the comeback of a few automotive stocks, especially Ford and Honda.

Stock market uncertainty continued to impact GM and Chrysler common shares, which stayed shy of their already reduced values by more than $1.00 per share after 10 days. Nissan and Toyota stocks were each off $1.00 as was Subaru common. Among truck stocks, Mack Trucks saw its stock rise slightly, while Volvo AB and Navistar share prices were off.

In the past two weeks, auto stocks on the Toyko exchange went down with everything else. Like American automakers, Japanese manufacturers said they are waiting for the market to settle before changing production.

Among the European automakers, stock prices last week fared worst among companies with heavy reliance on the U.S. market. Yet the import arms here reported little impact on sales so far.

Hans Jordan, Mercedes-Benz of North America vice president of marketing, said the company is concerned but is waiting for word from its field organization before revising its sales forecast.

Richard C. Marcy, Volkswagen of America vice president and head of Audi of America, acknowledged the market tumble probably softened its upscale market, but Audi has not trimmed its 1988 forecast yet.

Jaguar doesn't appear to be overly concerned because the average Jaguar buyer is not a yuppie but an established professional, said Thomas McDonnell, vice president of public affairs for Jaguar Cars Inc. Nonetheless, Jaguar share prices took a particularly hard beating among European auto stocks last week.

BMW of North America reported no major drop in sales and said it is planning no change in strategy. A company spokesman said the automaker saw some falloff in the New York area but the trend did not carry throughout the nation.

Joseph Nicolato, president of Volvo Cars of North America, said it is premature to make any marketing changes. He said dealers have reported that consumers are more conservative but no rash of cancellations.

Before the market crashed, Porsche Cars of North America announced production cuts on its four-cylinder models in anticipation of a slowdown in sales. A company spokesman said that Porsche dealers in selected markets have seen a falloff in showroom traffic. Like Jaguar, Porsche fared worse than most automakers in trading last week.

Saab-Scania of America President Robert Sinclair said some dealers reported that on the day of the crash, stores could have closed because of a lack of traffic, but within two days, traffic was back to normal.

At Austin Rover Cars of North America, the importer of the Sterling, Jed Connelly, director of sales, said dealers reported traffic slowed, first in New York and then in other markets. Nevertheless, the company is making no changes in advertising or ordering of cars.

Meanwhile, a number of auto analysts downgraded their sales forecasts as a result of the Wall Street jitters.

Maryann Keller, Furman Selz Mager Dietz & Birney, told the Society of Automotive Analysts in Tokyo last week that plummeting stock prices would cause a 1.5 million-unit decline in vehicle sales in 1988 from 1987 sales and that both U.S. and Japanese makers would be affected.

Among the other analysts who adjusted downward their 1988 forecasts were Ann Knight, Paine-Webber Inc.; Susan Jacobs, manager of automotive research at Merrill Lynch Economics; Jean-Claude Gruet, Salomon Brothers; and Michael Luckey, Shearson Lehman Brothers.

Lower sales obviously mean lower production and layoffs. For each assembly-line layoff, another two to three persons are laid off in supplier businesses. Layoffs will cause even shakier consumer confidence and will slow consumer spending more, analysts acknowledge. But they debate whether that will be enough to push the economy into a recession.

Meanwhile, in the showrooms, dealers reported a slowdown in traffic after the stock market crash. However, some said the slowdown began even before the stock market crashed, as people waited for the next round of industrywide incentives to begin. Many dealers had not expected a banner year anyway.

"Customers are afraid to get that money out of the bank and spend it," said Greg Swartz, general manager, Randolph Chrysler-Plymouth, Randolph, Mass. "They are waiting to see what happens."

In the heart of Manhattan, two major dealers reported no effect from the crash. Martin BMW-Volvo and the Potamkin organization, which has Mitsubishi, Toyota, Chrysler, Plymouth and Dodge among its city franchises, reported no change in sales.

However, in the New York suburbs, the car market definitely was a mixed bag.

Eli Bloom, president of Myrtle Motors (Pontiac), Middle Village, N.Y., said he saw a dramatic change in showroom traffic but he attributed some of it to the lack of incentives.

"I do anticipate, being in New York, to feel the effects of Wall Street problems in the next few months," he said. "So many people employed on Wall Street are getting [illegible] brokerage houses were laying off people in New Jersey."

John Chuchinko, president of the Bell organization, which holds 10 franchises in the New York area, reported spotty traffic.

The low end of his lines had not fallen off much, but traffic in the high-line cars, which for him include Saab, Porsche, Audi and BMW, had dropped and orders were canceled.

Victor Potamkin, chairman of the board of the organization that includes 42 franchises through the East, said he expected there will be an effect on cars in the $40,000 to $60,000 range but not on lower-priced cars.

What cars will be hit first and hardest is the subject of debate.

Analyst Keller, for example, predicted that luxury-car sales will be the first to suffer. "The buyer of a BMW, Jaguar or Porsche has seen his ability to make a down payment disappear in the stock market crash," she said.

Taking the opposing viewpoint was William Pochiluk Jr., of Autofacts Inc., who said disaster in the luxury market is less likely than in other segments, since most luxury cars are leased rather than financed or paid for in cash.

Donald DeScenza, analyst with Nomura Securities, said the superluxury market, including high-line Mercedes, BMW and Jaguar models, historically does not fall off during recessions.

A number of analysts suggested that high-line domestic cars, particularly Lincoln and Cadillac, will be hurt severely by the stock market problems.

Lincoln dealers across the country reported sales were off as much as 30 to 50 percent in October. They said sales had dropped before the market crash and even more after.

Contributing to this report were Automotive News Staff Reporters Michelle Krebs, Philly Murtha and Laura Clark, in Detroit; John A. Russell, in New York; Mary Ann Maskery, in Toyko; Francis J. Gawronski, in Los Angeles; Edward Lapham, in Hot Springs, Va.;

eek's auto production ghest since early May

y Barbaglia
E NEWS STAFF REPORTER

nestic automakers scheduled action of 160,061 cars last the highest total since the ended May 9 when 162,404 assembled.

t week's targeted output rose percent over the prior week's 98 but fell 6.74 percent from ear-ago week's 171,628.

far this year, 5,959,401 cars been completed, 9.24 percent w the 6,566,314 built last year is point.

ompanies split last week's esti- ed production as follows: Gen- Motors, 49.28 percent; Ford Motor Co., 26.43 percent; Chrysler Motors, 15.74 percent; Honda of America Manufacturing Inc., 4.21 percent; New United Motor Manufacturing Inc., 2.12 percent; Volkswagen of America, 1.25 percent; Nissan Motor Manufacturing Co. U.S.A., 0.82 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.15 percent.

Chrysler's St. Louis (No. 1) plant will close for two weeks on Nov. 9 for inventory adjustment. The plant is slated to reopen Nov. 23.

Chrysler slated overtime last Saturday at its St. Louis (No. 2) plant. The plant is also scheduled for daily overtime this week.

ruck output stays near 79,000; ear's build 7% ahead of 1986

Last week's scheduled domestic uck production of 78,881 dipped ightly (0.47 percent) from the evious week's 79,255 but in- eased 12.47 percent over the ar-ago week's 70,133.

Year-to-date, 3,207,761 trucks ave been built, 7.28 percent more han the 2,990,208 assembled last ear at this time.

Production of medium-duty trucks resumed last week at General Motors' Pontiac, Mich., plant. The line was idle for one week to adjust inventory.

Ford slated overtime last Saturday at its Lorain, Ohio, plant.

All Ford plants are scheduled for daily overtime this week.

Canadian truck production rises to 681,113; tops year-ago total

Year-to-date truck output in Canada inched past the 1986 total last week for the first time.

So far this year, 681,113 trucks have been built, slightly more (0.82 percent) than the 675,578 completed last year at this point.

Truck production was slated at 19,060 units last week, 6.72 percent more than the prior week's 17,859 and 80.17 percent more than the year-ago week's 10,579.

Scheduled Canadian car production of 24,125 units last week was the highest since the week ended Dec. 20, 1986, when 24,896 cars were built.

Last week's estimated output was 37.77 percent more than the previous week's 17,511 but 3.93 percent below the year-ago week's 25,113.

So far this year, 641,084 cars have been assembled, 26.80 percent below the 875,831 completed last year at this point.

Volvo's plant in Halifax, Nova Scotia, has closed permanently. Volvo's new plant, which is also in Halifax, will begin reporting production of 740 and 240 models later this fall.

Proton contract near for Bricklin

By Andrew R. McGill
AUTOMOTIVE NEWS STAFF REPORTER

KUALA LUMPUR, Malaysia — The builder of Malaysia's national car is "within weeks" of finalizing contracts for Malcolm Bricklin's Proton America to import 40,000-60,000 Proton Sagas a year to the United States, beginning next fall.

In an exclusive interview with Automotive News last week, Malaysian Prime Minister Mahathir Mohamad confirmed that "all the details have been worked out" for final contracts to be signed "within weeks," almost a year after Bricklin representatives and Malaysian officials signed letters of intent on the project last Dec. 3.

Providing Bricklin officials can make good on commitments to reduce current Proton building costs by 30 percent, through less expensive sourcing and greater production efficiency, sources close to the project said Bricklin could reach its targeted U.S. price of $5,600 for the base Proton sedan, which would be imported in a limited volume of about 5,000 units.

Prices would range up to about $9,500 for the luxury Aeroback sports sedan, which was introduced with great fanfare in Malaysia 10 days ago. Base, mid-line and premium versions of the sedan and the Aeroback, patterned after the Mitsubishi Lancer Fiori and each powered by Mitsubishi 1.5-liter engines, would go to the United States with volume concentrated on the higher end, Proton officials here said.

More luxurious Proton Aeroback, destined for America at about $9,500

In New York, Proton America President William Prior said a "ceremonial session" with Mahathir and Bricklin officials was held in Kuala Lumpur last month and that a formal sales agreement making Bricklin the exclusive U.S. distributor should be "wrapped up by the third or fourth week of November."

Prior likened the negotiations with Proton to the developmental process that led to Bricklin's successful importing of the low-cost Yugo.

Whether Bricklin would be as successful in the Proton deal came into question in recent months, amid reports of major differences between the Americans and Malaysians.

Mahathir, whose government owns 70 percent of the Proton project and views it as the cornerstone of Malaysia's move from an agricultural to industrial economy,

GM alters employee car plan

Some dealers say it cuts their profit

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

General Motors last week significantly expanded its discount program for employees, officially added suppliers to the list of those eligible for discounts and drew the fire of some dealers near its facilities by beginning a 10-week program that allows employees and retirees to purchase vehicles in dealer stock below dealer cost.

Several dealers near large GM plants or facilities complained that the 10-week program does not allow the dealer to include floorplanning expense in the price of the car purchased from stock. They also expressed concern that the stock vehicle program would continue in 1988, although GM said the program will be offered only from Oct. 23 to Dec. 31.

A GM spokesman said the 10-week program does not unfairly penalize any dealer who participates in the GM employee discount program. He said that on cars bought out of dealer stock, the participating dealer will be credited with the difference between the employee discount price of a similar factory-ordered car and the invoice price the dealer has already paid. The dealer receives 5 percent of the manufacturer's suggested retail price from GM.

Advertising costs included in the invoice would be credited to the

Wal-Mart unit offers cars, faces opposition

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Sam's Wholesale Club is marketing new Dodges to its customers in Orlando, Fla., despite stiff opposition from dealers in Texas and Arkansas who put a stop to the controversial system in their states in which club members paid $100 over dealer invoice for new cars.

A Sam's spokesman declined to comment on the experimen' in which new-car dealers are sought to supply cars to Sam's outlets at already discounted fleet prices.

But Mike Juenemann, Sam's store manager in Orlando, confirmed that new Dodges are being marketed at the store. He declined to say which Orlando dealer is supplying them.

Although not included in an automaker subsidy program, the fleet cars were priced lower in the fleet department than on the retail side, said a Texas new-car dealer.

An unknown number of dealers signed contracts with Sam's — whose parent company is Wal-Mart stores — in Arkansas, and cars were sold at Sam's Springdale outlet.

"Sam's sent letters inviting dealers into an auto fleet contract where they would agree to sell vehicles at $100 over invoice," said Dennis E. Jungmeyer, executive vice president of the Arkansas Automobile Dealers Association.

"The company promised to promote the dealership to its members through mailings, display of cars and advertising at its outlets."

Under the contract, dealers supposedly returned the $100 to Sam's. Jungmeyer said he was uncertain how dealers could profit from the arrangement except for selling a few add-ons.

Dealers participating with Sam's said product exposure, profits on aftermarket items and manufacturer holdbacks lured them into the program.

Big 3 carmakers typically retain 2-3 percentage points of the dealer discount in invoicing cars to dealers and pay it back at the end of the year. That would represent $260 to $390 for the dealer on a car with a sticker price of $13,000.

"It's our position that if Sam's can do it, then why not K-mart, Sears or Piggly-Wiggly (a grocery store chain)," said Jungmeyer.

The association complained to the Arkansas Motor Vehicle Commission, which said that Sam's use of the word "invoice" in its ad displays in conjunction with a dealer's name is unlawful.

Although Sam's isn't in violation of the statute, the dealership appearing on the same advertising device is, said J.H. Burnside, Vehicle Commission director.

Burnside said the commission ruled that Sam's is acting as a broker — also illegal in Arkansas.

LANCE GRAVES

All signs aren't blue since Black Monday

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Car manufacturers and industry analysts last week received mixed messages about the real impact of Black Monday and the subsequent stock market swings on car sales.

Consumers responding to the most recent Automotive News poll last week expressed a little more confidence about buying a new car than they did in the first poll taken right after the Oct. 19 crash. But the majority of the prospective 1988 car buyers said they would spend less money on a car than they would have before the crash.

Those slightly higher confidence levels were confirmed in October's domestic and imported light-duty-truck sales, which rose 8.75 percent, and in recovering U.S. car sales for the last 10 days of October.

U.S.-built car sales for the period almost matched last year's numbers (related story on Page 64). They were off less than one percent from last year's same 10-day period. That was an improvement over the mid-October 10-day period when sales were off 7.46 percent.

Total October sales of U.S.-built and imported cars were off 12.00 percent. Although combined car and truck sales were off 6.32 percent for the month, light-duty-truck sales were up 8.75 percent and Asian car sales held steady. Total imported-car sales inched up

Japan may terminate auto quota in 1988 Page 2

Big 3 trim fourth quarter output Page 3

Vehicle sales hold up in October Page 64

1st dealer-bound Continental AUTOMOTIVE NEWS JOE WILSSENS

Ford Motor Co. Vice Chairman Harold Poling and a group of veteran employees guide a 1988 Lincoln Continental off the assembly line at the company's Wixom, Mich., plant. Poling appeared at ceremonies last week marking production of the first car for a Lincoln-Mercury dealer. A total of 875 Continentals built before that are being put into rental fleets and lease service in an attempt to catch problems before the Dec. 26 intro.

Big 3 trim 4th quarter production

Car schedules may be cut further if buyer confidence weakens

By Michelle Krebs and Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Domestic automakers are scheduled to build 5 percent fewer cars in this year's fourth quarter than last, though further production cuts are likely.

The Big 3 automakers have revised downward in recent weeks their production schedules for the quarter while the other domestic manufacturers are maintaining the schedules they set in September.

The 1,805,034 cars that manufacturers plan to build this quarter compare with last year's fourth-quarter production of 1,903,517 cars.

That would bring year-end production to 7,153,663 cars, down 9 percent from 7,829,697 in 1986.

General Motors last week knocked out another 2,200 cars from its original fourth-quarter production schedule. GM now plans to build 885,106 cars in the fourth quarter, a 9 percent drop.

GM announced the indefinite closing of its Framingham, Mass., plant because of slow sales of the A-body Chevrolet Celebrity and Oldsmobile Cutlass Ciera. Production at the plant ends Nov. 30, idling about 3,700 workers.

The closing is permissable under GM's new contract with the UAW because of a clause that allows layoffs due to slow sales.

In October, GM ended one shift at its Buick City plant in Flint, Mich., because of slow sales. It produces the Buick LeSabre and Oldsmobile Delta 88. It will end indefinitely a second shift at its Wentzville, Mo., plant in November, also due to slow sales. The plant builds the Buick Electra, Oldsmobile 98 and Oldsmobile Delta 88.

UPDATED FOURTH QUARTER AUTO PRODUCTION
1987 forecast vs. 1986 actual

	1987	1986	% change
GM	885,106	976,803	-9.39

*1986 number includes American Motors.

In addition, GM has moved up the permanent closing dates for its assembly plants in Pontiac, Mich., and Detroit. The Pontiac plant will close Dec. 11 and the Detroit Clark Street plant Dec. 18.

In Canada, GM will cut one of two shifts at the Oshawa, Ontario, assembly plant Nov. 30. The plant makes the A-body Ciera and the Pontiac 6000. Instead of laying off half of the plant's 5,900 workers until year-end, GM will rotate them on the remaining shift in two-week blocks. That way no one loses a job and workers return fully trained after Christmas. The plant will be converted in 1988 to produce a version of the new mid-sized GM10 car.

GM Chairman Roger B. Smith has said that further production cuts are a possibility if the stock market crash seriously damaged consumer confidence.

Similarly, Chrysler Chairman Lee Iacocca has said Chrysler will look at early-November sales before making production changes. Chrysler recently trimmed its fourth-quarter production schedule by 16,000 units. Chrysler plans to build 287,000 cars, down 8 percent.

Chrysler closed its St. Louis I plant, which produces the Dodge Daytona and Chrysler LeBaron coupe and convertible, for two weeks today to reduce inventory.

Chrysler said it will eliminate the second shift on the Kenosha, Wis., lines producing its rear-wheel-drive Fifth Avenues, Dodge Diplomats and Gran Fury. At the same time, however, Chrysler will add a second shift at the end of this month to the line which produces the Dodge Omni and Plymouth Horizon. About 1,000 workers will transfer and 400 hourly workers will go on indefinite layoff.

Even Ford Motor Co. knocked out a couple thousand units from its previous scheduled. Ford had no Saturday overtime for October; last year three plants worked it.

Nevertheless, Ford plans to produce 472,624 cars in the fourth quarter, 8 percent more than in the year-ago quarter.

The other makers are sticking with their previously announced schedules (Automotive News, Sept. 28).

Honda will produce about the same number of cars this year as last. Mazda production will be added to this year's fourth quarter. New United Motor Manufacturing Inc., GM's joint venture with Toyota, will build 10 percent fewer cars in the quarter than last because of slower sales.

Volkswagen upped this year's fourth-quarter schedule by 3 percent from last year's. And Nissan will produce 55 percent fewer cars because the plant shifted to more truck production.

V-8 returns for '90 in T-bird, Cougar

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

WIXOM, Mich. — Ford Motor Co. plans to bring back V-8 power for the 1990 Ford Thunderbird and Mercury Cougar following a one-year absence.

A V-8 is offered in 1988 models but was scheduled to be dropped when redesigned models come out next year. The 1989 Thunderbird and Cougar will be offered with naturally aspirated and supercharged 3.8-liter V-6s.

But the thinking toward the V-8 has changed as the cars have moved toward production, said Thomas Wagner, Lincoln-Mercury general manager.

"We thought that V-8 engines for a whole lot of reasons were not going to be at any level of popularity — CAFE (corporate average fuel economy standards), customer demand, things of that nature. But as it turns out, there is still a great demand for them," Wagner said.

"We sell over a third of our Cougars as V-8s, so we really have a need for it and it's coming on as a late starter (in 1989)."

The Cougar currently is offered with a 3.8-liter V-6 or the V-8. Thunderbird models carry those engines, as well as a turbocharged, 2.3-liter inline, overhead-cam four-cylinder. The turbo version will be discontinued, Wagner said.

One source close to the company said the supercharged Thunderbird is being called the "Super Coupe" within Ford, though no final name has been picked. The source said the car offers 0-to-60 performance close to that of the Mustang GT, with the V-6 providing better fuel economy and a lower price than the V-8.

In another development, Ford announced last week that it plans to produce all automatic transaxles for its Tempo-Topaz and Taurus lines at its plant in Batavia, Ohio. Currently, Batavia supplies 72 percent of the so-called ATXs for those cars with the rest coming from Mazda in Japan.

The switch will take place in 1990. While the added output won't increase the plant's size or employment, "it will ensure the continuation of sustained production at Batavia into the early 1990s," said Louis Ross, executive vice president in charge of Ford's North American automotive operations. Batavia had been the subject of reports that suggested Ford would stop producing ATXs there in 1989.

Ross visited the plant last week to present Ford's Q1 award, recognizing Batavia as one of the company's premier suppliers.

The plant currently produces 437,000 ATXs annually and has a capacity of 465,000.

Toyota eyeing Kentucky plant expansion

LOS ANGELES — Kaneyoshi Kusunoki, president of Toyota Motor Manufacturing, is expected today to announce plans to build engine and axle facilities at its plant in Georgetown, Ky.

The steadily slipping dollar is behind Toyota Motor Co.'s increasing commitment to U.S. manufacturing, as the leading Japanese automaker tries to cut costs by boosting North American sourcing.

Toyota's assembly plant there is scheduled to start pilot production of Camry models late next May, reaching full production of 200,000 models a year by 1989 or 1990.

In recent weeks there has been speculation in Japan that Toyota will add an engine and axle operation, although Toyota had declined comment. Japanese sources say it will help Toyota reach a local content of 75 percent in the United States.

If Toyota builds an engine and axle plant in the United States, it would be the second non-U.S.-based automaker to do so. Honda American Manufacturing already has a car and motorcycle engine operation in Anna, Ohio, and is increasing production toward a goal of 360,000 car powerplants a year by 1989.

Mazda has not committed itself to an engine plant near its Flat Rock, Mich.

But Mazda President Kenichi Yamamoto announced at the Tokyo auto show that Mazda would increase local content to 70-75 percent on U.S.-built cars by 1991. That implies that engines would either be sourced from Ford, a possibility already acknowledged by both companies, or from a U.S. engine assembly plant, although Flat Rock is not large enough as it stands to make a separate engine operation economical.

Makers turn to fleet buybacks to boost sales

Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers may soon be getting competition from foreign manufacturers in the growing — and controversial — fleet repurchase and auction guarantee programs that place the risk of resale prices squarely in the lap of the automakers instead of their customers.

Roughly 325,000 of the so-called program vehicles — more than Cadillac sells in a year — will be sold this year through auctions by the domestic automakers.

The escalation of these incentive programs has fueled the growth and importance of the auction industry because makers have turned to them for quick disposal of their cars to dealers.

Under the programs, blocks of cars are sold to daily rental-car agencies, then repurchased months later at the sale price less depreciation or at a guaranteed resale price at auctions.

Automakers like the fleet programs because they expose large numbers of people to their cars and provide a way to smooth out the peaks and valleys of retail orders at plants. Dealers, however, are divided on whether the fleet incentive programs help or harm their business.

Nevertheless, the declining retail market has prompted a number of importers and their distributors — as well as their individual dealers — to join the domestics and experiment with their fleet programs.

Another trial is being conducted by Ford Motor Co., which is extending the industry's repurchase and auction guarantee programs beyond the usual customers — daily rental-fleet purchasers — to a corporate fleet.

"This is the third year of our test program with Hewlett-Packard," said a Ford official. "Obviously, we will be offering other companies similar programs. Most companies don't want to get into the auto business, so there is a need for managed fleet account disposal.

"It is a problem for companies to dispose of their fleets themselves."

The success of the domestic makers' fleet programs has merited serious examination from their import competitors, many of which did not have enough cars to sell at retail — much less to fleets — until recently.

Nissan, Volkswagen, Toyota and Mitsubishi all are now flirting with fleet incentive programs.

The number of program vehicles sold at auctions is expected to rise for several years before leveling.

General Motors' auction division will resell a mix of approximately 240,000 program and

Wholesale shipments rise

RESTON, Va. — Wholesale RV shipments increased 14.2 percent in August to 32,900 units, and shipments for the year were up 4.2 percent with a 280,100-unit total.

Seasonally adjusted, the August shipments represented an annualized rate of more than 417,000, and the eight-month figures were the highest since 1984, according to the Recreation Vehicle Industry Association.

Shipments of van conversions were up 5.2 percent in August, with a 14,200-unit total.

However, the up-again/down-again pattern of van conversion shipments this year has left the category largely unchanged. For eight months of 1987, converters shipped 127,000 units, off 3.2 percent from a year earlier.

Shipments of van chassis — with the seat-delete option — from manufacturers to converters, which portend future activity, were up substantially in August and for eight months.

Detroit's four major van manufacturers shipped 10,400 vans without seats to converters in August, up 96.2 percent over 1986.

For eight months, manufacturers shipped 137,400 such units to converters, up 24.3 percent over 1986.

The gains were largely in minivans, where manufacturers shipped 1,200 units in August, exactly double the number of a year earlier. For eight months, manufacturer shipments of minivans without seats totaled 25,100, up 17.8 percent from last year.

Full-sized van shipments with the seat-delete option totaled 9,200 in August, up 95.7 percent. For eight months they totaled 112,300, up 25.9 percent from last year.

Centurion to fill RV gap for Ford

Converter prepares vehicle to challenge GM's Suburbans

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. still has competitive gaps in its RV-oriented product line that some converters are beginning to fill.

Centurion Vehicles, White Pigeon, Mich., is readying a new, big four-door station wagon-type on-road/off-road vehicle to compete against General Motors' popular Suburbans.

Its vehicle, to be called the Classic 1000, will become available to Ford dealers by February.

The station wagon-style sport utility, currently being prototyped, is based on Ford's F-series pickup.

Robert Froschauer, president of Centurion, said his company is taking a Ford F-350 Crew Cab, cutting the 168-inch wheelbase chassis down to 140 inches, installing an extra set of seats and putting it all back together with essentially Ford Bronco-based parts.

Froschauer anticipates doing about 1,000 of those new vehicles in calendar 1988, though he feels demand will far exceed that.

Chevrolet/GMC Suburbans have been perennial favorites with the RV crowd because of their size, versatility and power.

In the 1987 model year, GM retailed 73,700 Suburbans, a high-priced, highly profitable vehicle, much favored by dealers over some of its other full-sized sport-utility models.

Like other Ford bailment pool companies, Centurion has been constrained by a lack of Ford chassis availability. It, like many other bailment accounts, has been on allocation this year.

In 1988, because of new opportunities created by Chevrolet's C/K pickups, Froschauer plans to develop his Chevrolet conversion business in a "much, much bigger way."

While continuing to upfit Ford SuperCabs and Crew Cabs, Centurion began shipping its first upfitted C/K pickups in November.

They include the half-ton extended cab, the one-ton extended cab models in both single-rear-wheel and dual-rear-wheel configurations and the Chevrolet Crew Cab.

Centurion offers basically the same standard interior and exterior conversion packages on both Chevrolet and Ford pickups. Packages include items like running boards, grille guards, roof-mounted horns, overhead consoles and center consoles.

In mid-November, it also will begin upfitting Chevrolet Suburbans, along with regular Bronco and Blazer conversions. Suburbans, too, are being decked out with running boards, grille guards, special sport paint packages, special wheels and tires and overhead consoles.

Centurion also manufactures a line of fifth-wheel tow vehicles for horse trailers and travel trailers, called the Cruiser GT.

It has been using Ford's 158 or 176-inch cutaway chassis as a platform for those fifth-wheelers, but will also begin using Chevrolet's cutaway chassis to produce them in January. The 454-cid V-8, which has been on "material hold," won't become available in GM's cutaways until January. It is rated at a maximum 10,000 pounds GVW.

Centurion also produces a line of automotive van conversions from Ford and Chevrolet vans, targeted at the low- to mid-price markets.

"We do a lot of things other people don't do," Froschauer said. "We have a lot of sheetmetal-working capability that we're using for our Classic and Cruiser conversions."

"Our biggest problem generally has been lack of chassis availability" in both Ford and Chevrolet products, he said.

If recent upheavals in the stock market affect the economy and Detroit's truck sales, though, Centurion and other converters are likely to find a much readier supply of chassis in 1988.

Monogram sees gains, adds dealers

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

SOUTH BEND, Ind. — Monogram Conversions plans to expand rapidly in the van conversion market, based on an aggressive dealer sign-up program.

Its roughly 200 dealers are concentrated in the Midwest and East. The expansion is targeted primarily at Southern and Southeastern markets.

The topsy-turvy economic climate could throw a curve to Monogram's 1988-model-year plans, but if it signs the dealers and covers the states it is attempting to cover, it will likely double its sales to 4,000 units, General Manager George Mahalick predicted.

At this point, he said, the company's dealers are retailing units and ordering new ones at the same level as last year. So it's business as usual for what normally is a slower time of year.

Monogram, with its Chevrolet and GMC bailment pool accounts, concentrates 100 percent of its van conversion efforts in General Motors models, Mahalick said.

Its philosophy is to offer as much value as it can "for the least amount of money," he said.

"A lot of people will say that, but the evidence is in how long they've been involved in the RV industry and their success in it," he said.

"We attempt to go out and offer as much product as we can to dealers. We don't look to make a fortune on each unit, but for something that will move at retail."

Mongram has a broad span of conversion packages at all the market's price points.

Michigan spotlights RVs
The 21st Detroit Camper and RV show was held Oct. 24-Nov. 1 at Cobo Hall. It was the largest public indoor display of RVs in the country. Michigan was second only to California in RV sales last year. Detroit is tops in travel trailer and fold-down camper sales nationally, according to Timothy J. DeWitt, executive director of the Michigan Association of Recreational Vehicles and Campgrounds.

Its full-sized conversion packages, for example, start at $2,098 (dealer cost), hitting the $3,000, $4,000 and $5,000 range with different feature combinations. With added optional equipment, they top out around $6,000 to $6,500.

The company's goal is to share its sales evenly among its price points.

Similarly, it has a broad spectrum of minivan packages in the $2,000 to $4,000 dealer-cost range. The average goes for about $3,000.

Minivan conversions have been very strong, Mahalick said, accounting for 35 to 40 percent of the company's sales.

They are normally stronger this time of year, but he said he feels that strength will carry through the rest of the 1988 model year.

"The minivan business, whether it is Astro or Safari, has definitely been growing. We are trying to analyze why so many people are moving into the minivan market," he said.

His feeling is that the minivan is drawing both its regular clientele and some full-sized-van prospects.

Monogram, as a sister division to Conquest, offers fairly similar product packages.

Mahalick said it is seeking to distinguish itself in subtle ways, by a heavier use of interior cherrywood, for example. (Conquest uses more oak.)

"We're attempting to do more and more of that (differentiation), but the marketplace is big enough so there's enough room for two sister companies" to operate successfully, he said.

The company's new 1988 products are different only from the standpoint of appearance, he added.

"Every year, there are some things of greater interest than others," he said. "Some years, it is CBs; other years, TVs. If the public is reacting to a certain electronic product, we try to incorporate it in our packages."

Georgia claims title of van-converter king

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Auto companies have put Tennessee on the manufacturing map, and some Georgia officials think van converters will do the same for their state.

In October, officials in northeast Georgia made the startling claim that their area had become the new "van conversion capital of America."

Their claim was based on a growing band of local converters and suppliers.

Even though the claim may be somewhat exaggerated, northeast Georgia's conversion business is growing. Regency Vans Inc., of Athens, Ga., for example, was Chrysler's fourth largest consignment pool conversion company in 1987, according to James E. Lynch, Chrysler manager of special vehicles.

Other smaller companies include National Traveller, of Bogart, Ga.; Executive Traveller, of Athens, Ga.; and Kinley Kustom, of Royston, Ga.

A lot of companies seem to be clustered in Lavonia, Ga., such as Auto Sales of Georgia, Motor Vehicle Sales, Tugalo River Custom Vans, Signet Vans and Quail Creek Vans.

As Herb Adams, an official with the Franklin County Chamber of Commerce in Carnesville, Ga., pointed out, "All of them are small shops that have developed, kind of grown into a good-sized industry.

"There is a multitude of these shops in this county. We don't know how many or how big they are or their exact economic impact on our county. But we're beginning to have a multitude of component suppliers moving in with small plants and distribution places for the conversion market."

Most recently, Coachmen Industries appointed Clint Rumble Southeastern sales manager for its Viking Formed Products operation.

Rumble will be based in Loganville, Ga., site of Viking's newest plant, with responsibility for all sales in Georgia, North Carolina, South Carolina, Alabama, eastern Tennessee and Florida.

Viking is a major manufacturer of tops for conversion vans and specialty products.

The Franklin County Chamber of Commerce recently staged its "First Annual Southeastern Van Conversion Show" at the Southeast Sports Complex in Carnesville, and got a strong turnout.

Some 28 conversion companies and 40 suppliers quickly bought out the 36,000 square feet of exhibit space available inside Carnesville's Sports Complex.

Officials, in fact, sold exhibit spaces outside the building as well.

The price was right. For $500, a converter got a 20- by 25-foot space for the three-day event, which included a dealers-only show the first two days and public display the third.

Suppliers got a 10- by 10-foot exhibit space inside the building for $375. Outside exhibit space went for $125.

More than 7,000 auto dealers were invited to attend, though considerably fewer showed up.

Although the community's events and claims may be somewhat overstated, it's still hard to ignore the South's growing appeal both as a manufacturing center and a good sales market.

Passive restraints available on more car lines for 1988

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Car buyers will find a wide array of models equipped with automatic seat belts or air bags when they go shopping for a 1988 vehicle.

A list of the cars offering automatic restraints either as standard or optional equipment has been prepared by the Insurance Institute for Highway Safety. The list shows that consumers will be able to purchase passive-restraint protection in models ranging from the Yugo GVLS to the Porsche 944 Turbo.

The Yugo GVLS comes equipped with automatic seat belts. The Porsche 944 Turbo and the 944S come with air-bag protection for both the driver and passenger as standard equipment.

General Motors will offer the largest choice of cars with automatic restraints. In all, 11 models will be built with automatic belts as standard equipment. GM will offer a driver-side air bag as an option on the Oldsmobile Delta 88.

While a number of manufacturers have elected to equip their more costly models with automatic seat belts or air bags, other automakers — such as Ford Motor Co. — also are offering the safety equipment on their lower-priced cars for 1988.

Ford is equipping the Escort with automatic belts as standard equipment. All Ford Tempo and Mercury Topaz models come equipped with automatic belts, although air bags can be ordered on both cars.

The large selection of 1988 cars available with passive restraints stems from a NHTSA rule requiring all new automobiles sold in the United States to be equipped with passive restraints by 1990. The rule allows manufacturers to reach this goal over four model years, requiring a greater percentage of new cars each year to be covered.

Last year the rule required that 10 percent of all new cars sold in the United States by each manufacturer have either automatic belts or a driver-side air bag. For the 1988 model year, NHTSA requires 25 percent of the new cars to be sold with either safety device.

In the 1989 model year, 40 percent of the new cars must be equipped with automatic restraints. In 1990 all cars must have the safety equipment.

Lower insurance premiums a passive-restraint lure

WASHINGTON — The nation's largest insurance companies are offering reduced premiums to many drivers who purchase vehicles with automatic restraints.

The Insurance Institute for Highway Safety said the discounts apply to premiums for medical payments for occupants of the insured automobile. In states with no-fault insurance, the discount applies to personal-injury protection for the occupants of the insured vehicle.

The institute explained that the discounts are not available in each state because of differences in state insurance regulations. The only states that do not offer the discounts are Hawaii, Massachusetts, North Carolina, Texas, Illinois and Kentucky, the institute said. In other states, regulatory authorities have not yet acted on the insurance companies' requests for discounts, the insurance group said.

For the past several years, the insurance companies have been one of the most active supporters of mandatory automatic crash protection. The companies have long maintained they can offer lower insurance rates — or maintain current rates — if the motor vehicle industry built vehicles with air bags and/or automatic belts.

NHTSA proposes change in rules for operation of power windows

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has proposed several changes in the government safety standard governing power windows.

NHTSA intends to include light trucks (less than 10,000 pounds GVW) in the group of vehicles covered by the power window standard and will subject power sunroofs to the standard.

The agency said it proposes the elimination of rules covering the opening of power windows because "the greatest risk of injury by a moving power window occurs during the closing of such a window."

The agency wants to eliminate a requirement that power windows be operable from the outside on key-lock-equipped vehicles only. NHTSA said, "Several vehicle designs now use some kind of numeric or alphanumeric code sequence to lock and unlock the vehicle from the exterior. NHTSA is not aware of any reason to treat these systems any differently from key-locking systems."

NHTSA is asking for comments on those proposals and is specifically asking whether the agency should consider a ban on closing power windows through the use of any external controls.

Comments should be filed with the agency before Nov. 29.

Senate may allow states to raise some speeds

WASHINGTON — An amendment allowing state governments to raise the speed limit on non-interstate highways has been attached to a Senate appropriations bill for the Department of Transportation. The full Senate has yet to consider the measure.

The amendment would affect 42 states. To be eligible, the federal, state or local roads would have to be divided, have at least four lanes and be reached only by using access ramps.

Roads in urban areas with populations of 50,000 or more would not qualify for higher speeds.

Last year, the House and Senate voted to allow a 65-mph speed limit on rural interstate highways.

AUCTION BRIEFS

Indianapolis Auto Auction officials are expecting more than 200 dealers and 400 spectators to attend the Nov. 18 General Motors dealers-only sale where a $5,000 cash prize will be awarded to the buyer of the 200,000th GM factory car.

"Preparations for the event started several months ago when GM realized it was nearing the sale of 200,000 factory cars sold at auction and wanted to do something special to show its gratitude to dealers," said Gary Pedigo, general manager of the Indianapolis Auto Auction.

Other cash prizes amounting to $5,000 will be awarded throughout the day to mark the occasion. The auction has sold nearly 12,000 GM factory cars since the beginning of the year.

Pedigo said there will be about 800 GM factory cars running under the gavel, and only GM will know which is the 200,000th car. The announcement of the winner will be made at the close of the auction.

"Two hundred thousand vehicles is a milestone for GM, and we are glad to be a part of their celebration," he said.

Richard J. Hart has joined the **Newburgh Auto Auction**, Newburgh, N.Y., as fleet and lease manager. He formerly was with Budget Rent-A-Car.

Indiana Auto Auction, Fort Wayne, Ind., is building a new six-lane auction facility on an 85-acre site.

Company vice president Dale Flora said the facility will include a 44,000-square-foot building; a three-lane, computerized check-in area; a reconditioning center; a car wash; and a restaurant.

The new complex will be opened in March 1988 and have a test track, parking and storage space for several thousand cars and room for future expansion.

Flora said the present location did not have enough available land for expansion. "We have outgrown this facility," he said. "The city just grew up around us and we didn't have enough parking for existing lanes. We needed more room."

Car collector James C. Leake will auction his entire collection of antique, classic and special-interest cars Nov. 21-22 at Expo Square, Tulsa, Okla.

Leake's collection of early Rolls-Royce autos, which will be auctioned by **Kruse International**, of Auburn, Ind., will give collectors an opportunity to purchase 10 percent of the existing Rolls-Royces manufactured between 1905 and 1912.

Among the Rolls-Royces to be auctioned are a 1905 Rolls-Royce 30-horsepower, six-cylinder model with body by Jarvis; a 1905 Rolls-Royce Light Twenty Tourer with body by Harrington of Hove; and a 1911 Rolls-Royce Silver Ghost Victoria Touring Car.

An important part of the sale will be the Leake Bus Collection, which includes a 1904 Milnes Daimler double-decker bus, a 1905 Logan bus and a 1920 Leyland Lioness Charabanc bus.

American classics will be represented by a 1933 Chrysler Custom Imperial, a 1929 Ford A Town Car with body by Briggs, a 1932 KB Lincoln convertible coupe with body and a 1903 Locomobile Steamer.

"It has taken me 50 years to put together my collection," Leake said, "and I am especially proud of my Rolls-Royces, for one of my 1905s has had only three owners in its lifetime."

Vehicle sales hold up in October, but Black Monday impact unclear

By Philly Murtha and Joseph J. Bohn
AUTOMOTIVE NEWS STAFF REPORTERS

A sharp increase in light truck sales during October helped offset a decline in the car side of the market to give domestic and imported manufacturers a fairly respectable overall sales performance.

The effects of Black Monday, as the stock market's initial crash has come to be called, have yet to be determined.

Some dealers said that sales in the latter part of the month may have reflected orders taken prior to the stock market's plunge.

Domestic manufacturers didn't announce new-model pricing until late in October, so that dealers were unable to process some of the paperwork on new-model orders taken earlier.

Where the U.S. market was, Oct. 1987

	Total Sales	Pct. of Total
SUBCOMPACT	60,030	7.53
COMPACT	146,459	18.37
INTERMEDIATE	203,557	25.52
STANDARD	109,151	13.69
SPECIALITY	4,675	0.59
IMPORT	273,607	34.30
TOTAL	797,479	100.00

Meanwhile, sales of 1,168,423 U.S. and imported cars and light trucks were off only 6.32 percent in October from last year's 1,247,307 total.

Combined domestic and imported new-car sales fell 12.00 percent in October to 797,479 from 906,236 in like 1986.

Total light-duty truck sales of 370,944 were up 8.76 percent in the month from 341,072 a year earlier.

The burnout from Black Monday barely touched the month's total imported-car sales which edged up 1,006 units, or 0.37 percent, to 273,607 compared with 272,601 a year ago. Imports accounted for 34.30 percent of the October market this year.

U.S.-built car sales slumped 17.32 percent during the month. There were 523,872 cars sold this October compared with last October's 633,635.

Only Nissan, Honda and Toyota's U.S.-built cars managed to top last year's performance.

Domestic manufacturers generally appeared to be gathering strength as the month wore on.

After starting October with a 39 percent decline during the first 10-day period, they reduced that to a 7 percent decline in the second 10-day period and finally finished the month almost even with a year ago in the third 10-day period.

There was a sales payback anticipated from the conclusion of low interest financing and rebate incentives that ended Sept. 30.

But generally the month turned out to be better than some dealers and manufacturers had feared.

General Motors had a 32.27 percent share of the car market during October; Ford Motor Co., an 18.12 percent share; and Chrysler (including Eagle Division), a 9.70 percent share.

Honda carved out 3.52 percent of the car market; Nissan, 1.03 percent; and Volkswagen and Toyota, 0.52 percent each.

Mazda retailed 154 cars built at its Flat Rock, Mich., plant for 0.02 percent of the domestic market.

October 21-31 sales of U.S.-built cars were 0.04 percent or 41 units shy of last October's final period. There were 218,649 cars retailed during this period compared with 218,740 in like 1986.

The selling rate in October averaged 19,403 units per day this year compared with 23,468 a day in 1986. There were 27 selling days in the month for both years.

Only Honda among the eight U.S. carmakers reported a sales gain for the month, although final 10-day sales had fallen off 7.88 percent.

Honda sold 940 more U.S.-built Civics and Accords this year than last for a 3.47 percent increase.

Although Cadillac boasted a 2.31 percent increase for the month and a 28.33 percent rise for the final 10 days of October, GM's sales declined 21.72 percent for the month.

Ford's final 10-day sales surged 12.60 percent but could not catch up total month sales which fell 6.86 percent.

Nissan, Toyota and Honda all fared well with gains in sales of U.S.-built cars during the month.

Honda's sales were up 3.47 percent; Nissan's sales rose 23.63 percent; and Toyota, which just began selling U.S. cars here at this time last year, reaped a 398.07 percent gain in October sales.

Mazda reported its first sales from Flat Rock production. Volkswagen's sales, continuing their decline, were off 21.90 percent in October.

Sales of new imported cars man-

Sales charts compiled by Karen Dobkowski

SALES

aged to edge up 0.37 percent over last October and, as noted, accounted for 34.30 percent of October's car sales here. Honda's upper scale Acura garnered a 40.27 percent gain over last October. Hyundai's sales were ahead by 17.84 percent.

October sales of higher end imported cars were more affected than other segments. Audi sales were down 66.48 percent and Peugeot sales plunged 60.22 percent in October. Porsche month sales fell 29.99 percent; Mercedes-Benz sales dropped 25.66 percent and Jaguar's sales were off 20.88 percent from last October.

U.S.-built car sales almost recovered in the final 10 days of October. Last October, carmakers were coming off explosive September and early-October sales which brought some of the highest sales numbers in auto history for any 10-day period.

For the final 10 days, Ford and Nissan shared sales kudos.

Ford's sales rose 12.60 percent; Nissan's were up 15.73 percent.

GM sales declined 5.78 percent; Chrysler's were off 4.17 percent; Honda's were down 7.88 percent; Volkswagen's fell 14.73 percent.

The light truck industry, meanwhile, managed another solid increase and another monthly record in its October sales.

The truck market is still benefitting strongly from the crossover of car buyers into trucks.

Light-duty truck sales of 370,944 in the month were up 8.76 percent from a year ago, while calendar year eight-month sales of 3,926,688 were up 1.41 percent from last year's record pace.

Domestic companies accounted for just about all the gains.

Their combined 305,059 sales in October were up 10.53 percent from a year earlier while the imports' 65,885 sales were up a scant 1.25 percent.

Domestic companies captured an 82.24 percent share of the market in October, up from an 80.92 percent in like 1986.

Import companies' market share dropped to 17.76 percent from 19.08 percent a year earlier.

It was a generally good month for everyone in the domestic truck industry, except Jeep.

Ford and Chrysler picked up market share as well as substantial sales gains in the month.

Ford's October sales of 113,641 were up 16.51 percent from a year earlier while Chrysler's sales of 56,474 were up 16.52 percent.

Chevrolet and GMC also had fairly similar, but more moderate, sales increases.

Chevrolet's sales of 93,898 were up 7.71 percent; GMC's 23,749 sales were up 7.03 percent.

Jeep sales of 17,297 were off 16.16 percent in the month.

Among the imports, Nissan, Isuzu, Mitsubishi and Suzuki had sales gains in the month; sales of Toyota, Mazda, and Subaru trucks were off. Range Rover, still new to the market, is continuing to build momentum.

DISCOUNT

FROM PAGE 1

dealer's account. However, floorplanning costs for each car are the responsibility of the dealer, said the GM spokesman. He confirmed that floorplanning costs could affect dealer profits, but he added that it is up to the dealer to sell the vehicle to the individual.

Still, many plant city dealers were upset with the news.

"They have taken the retail automobile dealer and made him a wholesaler; this is a substantial reduction in profit potential for me," said a dealer near a large GM plant in Michigan. Sales to GM employees make up 70 to 80 percent of his business.

Though the 10-week program is not mandatory, many plant-city dealers said that they want to keep GM employees happy since they represent a large share of their business. They also fear that if they do not offer the program, employees will shop elsewhere.

Between Oct. 23 and Dec. 31, GM employees and retirees can purchase vehicles from dealer stock under the same plan as a car ordered from the factory.

Previously, the price of a vehicle purchased from dealer stock was negotiated between the dealer and the employee or retiree. The employee or retiree then received 5 percent of the sticker price on the vehicle (less freight costs) from GM, which he could use as a down payment.

Under the 10-week program, however, the employee can purchase a car from dealer stock at a price below the dealer net price. That price is set by GM. Typically, employee discount participants receive a discount of 18 percent from the manufacturer's suggested retail price; more expensive models — such as a Chevrolet Corvette — carry a 20 percent discount.

The dealer then receives 5 percent of the manufacturer's suggested retail price on stock vehicles under the 10-week program. The same figure applies to cars ordered from the factory during and after the 10-week program.

The difference between the regular program and the 10-week program is that normally the dealer is able to negotiate a price that includes all of his costs on the vehicle in stock. Those costs are not incurred when a vehicle is ordered from the factory. Under the 10-week program, the price is set by GM.

"In reality, GM is paying 3½ percent in gross profit (on each vehicle ordered from stock in an employee purchase plan). Can you expect to survive on that? Probably not," said Bill Hesser, owner of Hesser Olds, Janesville, Wis. Forty percent of his new-car sales are to GM employees. GM operates an assembly plant in Janesville.

The 10-week program applies to all 1987 and 1988 vehicles except the 1987 Chevrolet Corsica and Beretta, purchased new and delivered within the program period. Dealers cannot trade cars with other dealers to fill those orders.

Several dealers near large GM plants or facilities have written to the National Automobile Dealers Association to protest the 10-week policy.

Ron Tonkin, the Portland, Ore., megadealer who was recently elected first vice president of NADA, said last week he had received a letter signed by several plant-city dealers and will take the letter to the NADA executive committee on Wednesday.

"To say these dealers are upset is mild," Tonkin said. He declined to disclose the details of the letter.

GM also announced to dealers permanent changes in its employee purchase program, most of which were a result of its new contract with the UAW.

Effective Nov. 3, GM expanded its employee purchase program to the immediate family members of a GM employee or retiree. Immediate family members include the employee's/retiree's spouse, children, parents, siblings and spouse's parents.

A GM spokesman said last week that the company employs 366,000 hourly employees and 123,000 salaried employees in the United States.

Since dealers accept lower profit margins on employee-discount vehicles, the expansion of the program to include family members could also erode profits of dealers near GM facilities because it gives discounts to people who normally would not receive them.

But a GM spokesman argued that the expansion of the program could give GM dealers more sales opportunities.

The number of vehicles one family can purchase under the employee purchase program in one model year has been increased from two to four.

The GM employee, retiree or an eligible family member must hold the title in his or her name for six months or until the end of the model year, whichever is longer, before selling it to another person.

GM said it will audit the program to ensure that employees and their families are abiding by program rules; if they violate the rules, the individual could be ineligible for a GM discount for up to two model years.

Ford Motor Co. allows only the employee or retiree, their spouse, their children, their parents and their spouse's parents to purchase vehicles under the employee purchase program. A family unit can purchase two vehicles each model year under the Ford program.

Ford employees, retirees and eligible family members may purchase the vehicle at dealer cost either by factory order or from dealer stock. Under the new Ford UAW contract, hourly employees may have monthly payments for their discount vehicles deducted from their paychecks. Previously, that choice was offered only to salaried employees.

GM already had a payroll deduction program in effect for salaried and hourly employees.

Chrysler Motors includes employees, retirees and surviving spouses and employees' children, parents and spouse's parents in its employee purchase plan. The Chrysler employee, retiree or surviving spouse can purchase two vehicles per model year; the other members of the family are allowed to purchase a total of one car.

No used or demonstrator vehicles can be purchased under the Chrysler employee purchase program. Chrysler does not have a official program for suppliers. Such allowances are granted on an individual basis.

The employee's purchase price is equal to the factory invoice price less the 3 percent holdback allowance. Chrysler then pays the dealer an undisclosed fee for handling the sale. On imported Chrysler vehicles, the buyer pays the invoice price.

The expansion of the GM program, according to dealers, is more realistic than the former setup since many employees sold vehicles to members of their families at the employee discount price after six months or the end of a model year.

GM employees, retirees and surviving spouses may purchase only two used company vehicles per year. That rule has not changed.

GM has also instituted a purchase program for key employees of more than 30,000 GM supplier companies. GM put no figure on the number of supplier employees eligible for discounts on GM vehicles. In the past, discounts were given to selected supplier employees on an individual basis. The new program is GM's first official purchase program for employees of its suppliers.

A GM spokesman said principal officers of supplier companies and employees who contact GM on a regular basis on behalf of the supplier have been informed of their eligibility.

The supplier employee can order the vehicle or purchase it from dealer stock. The price the supplier employee will pay the dealer equals the dealer net price plus 4 percent of the net price. GM will give the dealer 2 percent of the invoice price. The supplier discount program was not a part of the new UAW contract.

Supplier employees are not eligible for the 10-week program on dealer stock vehicles. Members of supplier employee's family are not eligible for the GM discount program. A supplier employee must keep the vehicle in his or her name for six months or until the end of the model year, whichever is longer, before selling it.

GM has eliminated the rule that required employees to buy a vehicle under the employee discount program at a dealership within a 20-mile radius of their homes.

Dealers in plant cities contacted by Automotive News said the permanent expansions to the programs could help sales; however, some wondered if the increased volume would offset the reduction in per-unit profit.

Mitsubishi net income rises 4% in first half

TOKYO — Mitsubishi Motors Corp. reported a 4.2 percent increase in unconsolidated net income for the first half of its fiscal year ended Sept. 30.

The company also listed a 96 percent increase in ordinary profit from 5.4 billion yen in 1986 to 10.6 billion yen ($75 million) in 1987.

That was offset, however, by a decline of 32 percent in operating profits from 20.4 billion yen to 13.9 billion yen ($98 million).

Analysts point to the need for Mitsubishi to post a large ordinary profit prior to its application next year for listing on the Tokyo Stock Exchange.

Much of the profit listed currently is presumed to come from aggressive selling of securities.

Mitsubishi also reported increases in sales in both the domestic and export markets. The company's forecast for 1987 is now 1.4 million units, an increase of 120,000 over 1986.

Kazuo Sekino, director of accounting and finance, attributed much of the export increases to good sales of pickup trucks in the United States and to an increase in sales of Mirage models in Europe.

October worst for cars since '82

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic auto production for October of 671,681 was the lowest for that month since October 1982 when 415,197 cars were built.

Last month's output was 17.39 percent more than the September total of 572,184 but 8.15 percent below the year-ago month's 731,245.

Automakers assembled their six-millionth car of the year last Tuesday, one month behind 1986.

So far this year, 6,118,681 units have been built, 9.13 percent below the 6,733,140 completed last year at this point.

Last week's targeted build of 159,087 cars dipped slightly (0.73 percent) from the previous week's 160,254 and fell 11.32 percent from the year-ago week's 179,398.

Companies split last week's scheduled output as follows: General Motors, 51.56 percent; Ford Motor Co., 26.01 percent; Chrysler Motors, 13.61 percent; Honda of America Manufacturing, 4.37 percent; New United Motor Manufacturing Inc., 2.20 percent; Volkswagen of America, 1.26 percent; Nissan Motor Manufacturing Co. U.S.A., 0.82 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.17 percent.

GM announced it will suspend production of its Chevrolet Celebrity and Oldsmobile Cutlass Ciera models built at its Framingham, Mass., plant on Nov. 30, due to sluggish sales. About 3,700 hourly employees will be placed on indefinite layoff until the plant resumes output; however, GM gave no indication as to when the plant will reopen.

Ford slated overtime last Saturday at its Kansas City, Mo., plant.

All Ford plants except Edison, N.J., are scheduled for daily overtime this week.

Chrysler's St. Louis (No. 2) plant is slated for daily overtime this week.

Canadian trucks climb to October record

Canadian truck production of 76,390 in October was the highest ever for that month.

Last month's output surpassed the previous October record of 67,285 built in 1985.

October's truck production was 18.35 percent more than September's 64,545 and 42.79 percent above the year-ago month's 53,497.

Last week's scheduled truck build of 17,971 dipped 2.46 percent from the prior week's 18,424 but was 75.88 percent above the year-ago week's 10,218.

So far this year, 698,448 trucks have been assembled, 1.87 percent more than the 685,622 completed last year at this point.

October car production of 77,851 was the lowest for that month since October 1982 when 54,212 cars were built.

Last month's output was 19.19 percent more than the preceding month's 65,316 but was 28.84 percent below the year-ago month's 109,402.

Scheduled production of 23,914 cars last week was 14.11 percent more than the previous week's 20,957 but 13.23 percent below the year-ago week's 27,559.

Year-to-date, 661,830 cars have been built, 26.54 percent below the 900,944 assembled last year at this time.

Production was halted last Wednesday at Chrysler Motors' Bramalea, Ontario, plant, which assembles the Eagle Premier. The shutdown reflects quality problems, and Chrysler did not indicate when the plant will reopen.

General Motors will cut one of two shifts at its Oshawa, Ontario, plant on Nov. 30 due to slow sales of the Oldsmobile Cutlass Ciera and Pontiac 6000. No workers will be laid off as GM will rotate them on the remaining shift in two-week intervals.

Best month ever for U.S. trucks

Domestic truck production in October was the highest for any month ever.

Output of 369,408 trucks passed the previous record of 364,473, built in October 1978.

Last month's build was 12.40 percent more than the September total of 328,658 and 15.71 percent more than the year-ago month's 319,243.

Last week's targeted production of 76,764 was 2.02 percent below the previous week's 78,350 but 4.21 percent more than the year-ago week's 73,664.

General Motors slated overtime last Saturday at its Baltimore and Detroit plants.

Ford scheduled Saturday overtime at its Wayne, Mich., and Lorain, Ohio, plants.

Daily overtime is slated this week for all Ford truck plants.

Fleetwood plant up for sale by GM

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors will spend $13 million to maintain its Fleetwood body assembly plant in the hope that it can be sold by summer.

Fleetwood and its companion Clark Avenue plant here, which build rear-wheel-drive Cadillacs, are now scheduled to close Dec. 18, five days ahead of the original schedule.

Larry Tibbitts, plant manager of Fleetwood and Clark, said GM's Argonaut Realty is looking for a buyer for the Fleetwood plant. If the plant is not sold by summer, GM will tear it down, he said.

GM will spend an additional $27 million to actually shut down the Fleetwood, Clark and Conner plants, he added. Conner provides the two assembly plants with stampings.

A proposal has been made to move Cadillac engineering to the Clark plant; however, it has not been approved, plant managers said. There are no plans to move Cadillac's headquarters from the Clark plant, they said. Old portions of the Clark Avenue facility are being demolished.

The Fleetwood and Clark plants currently employ about 1,500 workers each and operate on a single shift. The shutdown had long been expected.

Production of the Fleetwood Brougham will be transferred to GM's Arlington, Texas, plant. Pilot production has begun, and actual production is slated to begin in February or March 1988.

Roman Motors canceled

Recruits dealers after pact voided

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The cornerstone agreement that Roman Motor Corp. and its partners claimed gave them the rights to distribute Romanian-built motor vehicles in the United States was officially canceled in mid-1986.

Executives of Roman Motor signed that agreement, yet continued to appoint dealers.

That original agreement was signed in Paris on Nov. 28, 1985, by a representative of Auto Dacia, the Romanian government-owned foreign trading company, and executives of Sveltec, the Swiss partner of Roman Motor. It granted sweeping distribution rights to the Swiss company.

However, it was never approved by the management of Auto Dacia.

On May 15, 1986, executives of Sveltec, Roman Motor (at that time doing business as Auto Dacia of America) and Auto Dacia met in Bucharest. They signed a protocol that declared the Paris agreement "null and void."

Since the signing of that protocol, neither Sveltec nor Roman Motor has offered any other contract to support their claims for U.S. distribution rights for the Romanian-built Aro, Dacia and Olcit vehicles.

However, Roman Motor continued to appoint dealers through 1987. A dealer list obtained by Automotive News indicated that Roman Motor eventually collected as much as $1.7 million from as many as 60 dealers.

It was also learned that an unknown amount of money was collected from other investors.

The Nov. 28, 1985 agreement has been used by Roman Motor as recently as last month. In response to the discovery process in litigation filed by eight dealers in federal court in Texas, this document was among others submitted. Paul Brumley, attorney for the dealers who filed the suit, said last week that this was the only document submitted that tied Sveltec to Auto Dacia.

Automotive News has obtained a copy of the critical May 15, 1986 protocol through the Romanian Embassy. The contents of the protocol were confirmed by Ion Stamatescu, managing director of Auto Dacia, in a telex through the embassy. Stamatescu said "All of its provisions are in force without any change."

The protocol was signed for Sveltec by Ole R. Spaten, then an officer of the company, and Oscar Jost, chairman. It was signed for

Opel Omega: Quality has been atrocious and parts scarce, say German dealers

Goliath stumbles in Europe: A tale of trouble for GM

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — General Motors has been singing the praises of its European car operations as a counterpoint to sour strains in the United States.

But even as GM is about to end a long string of losses in Europe, it is still facing myriad problems: falling market share; fresh complaints about quality; severe factory delivery problems; troubled labor relations; a lingering dispute over the standard dealer contract in Germany that could wind up in court; and talk of a power struggle between Adam Opel headquarters in Russelsheim, West Germany, and GM-Europe's new base in Zurich, Switzerland.

The problems also take in chronic understaffing in Zurich and reputed low morale on the high-tech factory floor in Russelsheim, where, according to the president of Adam Opel's German dealer association, "the disorganization is incredible."

After months of remaining publicly silent, Opel dealers have described to Automotive News a series of quality deficiencies on the hot-selling Opel Omega/Vauxhall Carlton — Europe's 1987 Car of the Year and one of three cars that Opel is expected to export to the United States.

What is more, cars are stacking up in service departments because the factory does not have enough replacement parts. Dealers complain that GM's historically slow and unreliable deliveries have taken a sharp turn for the worse this year, despite a new computerized ordering system that was supposed to solve the problems.

Meanwhile, GM was the only one of six European high-volume manufacturers to lose market share throughout Western Europe during the first nine months of 1987.

Because of labor opposition, GM could not implement a plan to put its Zaragoza, Spain, plant on three shifts to meet demand for the Corsa subcompact built exclusively there. German dealers say the shortage of Corsas cost Opel a full 1 percent share of the world's third largest market.

Opel dealers also complain that GM has not been on the leading edge in introducing technologies crucial to image in performance-conscious European markets. Moreover, in West Germany, where the public profile for auto company chief executives is believed to be highly important to car sales, GM Chairman Roger Smith has been under criminal investigation.

Amway expanding car sales program

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

GRAND RAPIDS, Mich. — Amway Corp., the wholesale purveyor of soap, car wax and other household products, is now marketing new cars at $150 above dealer invoice under a system that uses Ford, General Motors and Chrysler dealers to supply the vehicles.

Mike Butler, president of Minnesota-based National Fleet Network, said Amway Auto Network has 1,500 auto dealers in 26 states and plans to expand into 35 states.

"The program is not a buying club or service," he said. "It is a program that originally started out through a group of dealers as a way to help Amway distributors purchase their vehicles."

Membership to Amway Auto Network is open to anyone who pays the $24.95 fee to join. National Fleet Network administers the program for Amway.

Butler said the program will be expanded to only those states where it will comply with state laws.

"There are states where it (Amway Auto Network) can't be done due to certain state regulations," he said. "Texas and Arkansas have brokering laws and we don't want to start a program in a state where it wouldn't comply."

Amway boasts a network of 750,000 distributors — most working out of their homes — in the United

Auto inventory climbs

Domestics lead way to 72-day supply

By Geoff Sundstrom and Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTERS

Combined inventories of imported and domestic cars on Nov. 1 were the highest for that date since 1982.

The combined imported and domestic car stockpile on Nov. 1 was 2,124,674 cars, a 72-day supply.

The high inventories coincided with a drop in the combined selling rate for imported and domestic cars during October. The combined daily sales rate for the month was 29,536, the lowest recorded for October since 1982, when Automotive News began gathering data on import inventories.

A combination of fewer incentive programs, a downward sales trend for the year and fears growing out of the stock market collapse contributed to the boost in inventories.

Big 3 cleanup incentives expired early in October.

There was a 58-day supply of imported cars and trucks on Nov. 1, or 743,244 units. That breaks down into a 56-day supply of imported cars (565,743 units) and a 66-day supply of trucks (177,501 units). There were 80 days' worth of unsold domestic cars, or 1,558,931 units.

The average Nov. 1 supply of cars for the last six years is 56 days, although Japanese imports have tended to be considerably lower.

The inflated inventories on Nov. 1 were generally attributable to slower domestic car sales. Although import inventories are up,

GM-UAW make it official

General Motors Chairman Roger Smith, left, and UAW President Owen Bieber shake hands at the signing of a new three-year contract covering 370,000 GM workers. The agreement, which contains innovative job-security provisions, was reached without a strike deadline being set. The GM agreement is patterned after the UAW-Ford Motor Co. pact, which negotiators also reached without the threat of a strike.

More incentives bloom at Chevy

Rebates now include additional Cavalier, Chevette owners

By Laura Clark and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Dealer and consumer rebates continue to flourish at General Motors.

Last Wednesday, Chevrolet expanded its rebate program to all owners of eligible Cavaliers and Chevettes — not just those who received coupons in the mail. It also expanded eligibility for rebates and free service for truck owners who test-drive a Chevy. Earlier in the week, it began mailing more rebate coupons on trucks to small businesses.

Meanwhile, trip incentives were launched for dealers of Buicks, Chevrolet trucks and GMC trucks.

Under the new Chevy program, owners of 1982 through 1986 Cavaliers and 1981 through 1986 Chevettes may receive a $500 rebate on any of the division's domestic and most imported 1987 and 1988 cars and light trucks except Celebrity, which receives a $750 rebate.

The program, called "Somebody Special," runs from Oct. 23 to Dec. 31 for Cavalier owners and from Nov. 12 to Dec. 31 for Chevette owners.

The Sprint ER, Sprint Metro and Spectrum Express are not included in the Cavalier owners' rebate program. Owners must have purchased their Cavalier or Chevette new and must still own the vehicle at the time of purchase to be eligible for any of the rebates.

A 3-year/30,000-mile free scheduled maintenance offer is also being made to all owners of 1981-to-1986 Chevrolet cars and light-duty trucks, except owners of 1982-to-1986 Cavaliers, 1981-to-1986 Chevettes and 1979-to-1986 full-size and compact Chevrolet pickups.

The division also is offering $100 to any owner of a 1979-to-1986 Chevrolet, Ford or Dodge full-size pickup who test drives a C/K pickup truck and buys it or any of those rival makes between Nov. 1 and Dec. 31.

Chevrolet also will give a 3-year/30,000-mile free scheduled maintenance certificate to any of those truck owners who purchases a C/K pickup within the program period. The scheduled-maintenance bonus is also being offered to any owner of a 1979-to-1986 Chevrolet S-10, El Camino, Luv, Ford Ranger or Courier pickup truck upon the purchase of any Chevrolet S-10 pickup truck between Nov. 1 and Dec. 31.

If a consumer owns more than one eligible vehicle, he must choose one rebate for each purchase.

In the previous program, Chevrolet mailed coupons to 4.9 million owners of Cavaliers, Chevettes, Chevy and Ford full-sized and compact pickups and Dodge full-size pickups. There now are as many as 13.5 million owners who could collect rebates.

Dealers said consumers who received rebate coupons often discarded them. Owners of eligible vehicles who did not receive coupons often complained that they, too, should receive rebates. Chevrolet officials said the new requirements alleviate both problems.

The division, meanwhile, began a direct-mail rebate for owners of small businesses. The "Fleet Commander" program offers $400 to $1,000 on virtually all trucks — Blazers, vans, chassis-cabs and pickups.

Businesses with less than 10 company vehicles that don't qualify for fleet discounts will receive the mailing.

The rebates vary by model and transmission. The rebates on vehicles equipped with the four-speed automatic overdrive transmission tend to be highest. Chevrolet is offering these business people an additional $1,000 on trucks with the 6.2-liter diesel engine.

The program, which runs from Nov. 13 to Dec. 31, covers 1987 and 1988 models. Buyers must take delivery from dealer stock by Dec. 31.

The program can be combined with other special promotions. A business can use the rebates on more than one vehicle that it purchases.

Buick announced a trip award for dealers meeting individual sales objectives of 1988 and prior year Buicks between Nov. 3, 1987, and March 2, 1988.

Each participating Buick dealer will be assigned to one of 200 competitive groups; each group is made up of dealers with similar goals. Groups will vary in size.

The dealer who achieves the highest percent of his retail sales objective wins a 10-day trip to Monte Carlo, including tickets to the Grand Prix and the Cannes Film Festival.

The dealer with the second highest percentage wins a trip to Bermuda. Dealers meeting individual objectives win $200 worth of merchandise.

Dealers who want to participate will be charged $100 from their open account; the $100 will be donated to Special Olympics.

GM started a dealer trip program for GMC light- and medium-duty and Chevrolet medium-duty truck sales and service. Individual goals for the program, called "Discover the Legends," will be announced Nov. 18.

To receive points, dealers must deliver trucks between Nov. 1, 1987 and April 30, 1988. The service portion runs Dec. 1, 1987 to May 31, 1988.

Suzuki dealers in Japan to get Grand Am, Corsica

By David Versical and Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTERS

The declining value of the dollar is prompting General Motors to step up export plans for Japan and Europe.

GM said last week that it will begin selling Pontiac Grand Ams and Chevrolet Corsicas and Berettas through Suzuki dealerships in Japan early in 1988. GM also expects to double its sales of North American-built cars in Europe during the 1988 model year.

GM's actions come on the heels of Ford Motor Co.'s announcement last month that it will begin exporting the Ford Taurus to Japan. Ford expects to eventually send several thousand units annually.

U.S. automakers, which had been restricted in their export potential by the strong dollar, are renewing their push toward exports as a weaker dollar makes their products less expensive overseas. The companies also contend their new generation of smaller, more nimble vehicles will be more appealing to overseas buyers.

In Japan, the Grand Am and Corsica/Beretta will be sold under the GM label through Suzuki's Cultus sales network. Suzuki said that within three years, it expects to be selling 3,000 units annually through 200 dealerships. The goal for the first year is 500.

GM currently sells about 3,000 cars a year in Japan through its longtime independent distributor, Yanase & Co. That relationship will continue, and Yanase will work with Suzuki in setting up the network for the Grand Am and Corsica/Beretta.

George Peterson, president of AutoPacific Group, a consultant firm in Newport Beach, Calif., said GM's new offerings in Japan will help meet a demand for certain specialty cars. "Several products are being sold in Japan as left-hand drive, and the young Japanese yuppie is buying them as an image statement," Peterson said.

The arrangement echoes the deal GM and Suzuki have in the United States. GM, which bought a 5.3 percent equity stake in Suzuki in 1981, currently sells a Suzuki-built product as the Chevrolet Sprint.

In Europe, GM expects to sell more than 10,000 North American-built vehicles in the current model year, up from 5,400 in 1987. Major markets include West Germany, Belgium and Sweden. GM expects the Pontiac Bonneville, Buick Century and Corsica/Beretta to be strong sellers.

Meanwhile, Daimler-Benz AG of West Germany outlined new sales goals last week in light of the import growth in the Japanese market. Gerhard Liener, vice president, said the company could "very likely sell 40,000-50,000 units in the long run." The company expects to sell 18,000 units in 1987, up from 13,666 in 1986.

Liener did not say when it will reach 50,000 sales in Japan.

Aerostar to offer fwd, stretched models

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. plans to offer a four-wheel-drive version of the Aerostar minivan in the 1989 model year.

Ford is planning to introduce an extended version of the Aerostar at the same time. It will be about 18 inches longer than the current model.

A 4wd edition of that extended van likely will be available no sooner than the following year, sources close to Ford said.

The Aerostar's 4wd package will be similar to the "on-demand" system that has been offered on the Ford Tempo and Mercury Topaz since the 1987 model year, sources said. The differences will essentially reflect the real-wheel-drive configuration of the Aerostar. The feature is expected to cost about $800, but it is not clear whether it will be offered as an option or in a separate model.

The Aerostar will continue to be powered by a 3.0-liter V-6 in 1989. But sources said Ford is planning to make a larger engine available in the following year.

Sources said the changes are being made to keep the Aerostar fresh and to target the Chrysler minivan series. Ford's 4wd version is expected to win some customers in northern and mountain states, where buyers might otherwise lean to the front-wheel-drive Chryslers.

Aerostar was introduced in May 1985 as a 1986 model.

Aerostar is currently being built on two shifts in St. Louis.

The company is planning a four-door Bronco as part of a revision of that series in about three years, sources said.

Detroit Diesel, Penske forming joint venture

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors and Penske Corp. will announce this week a joint venture for the design, manufacture and worldwide sales of heavy-duty diesel engines.

Penske Corp. will own 60 percent of the new company, to be called Detroit Diesel Corp., and GM will own 40 percent, according to a high-ranking Detroit source involved in the negotiations.

Under the terms of a preliminary agreement, the joint-venture company will control the heavy-duty engine activities at the current Detroit Diesel Allison Division facility here.

The new company also will be responsible for worldwide sales and service activities for the medium-duty engines currently distributed by Detroit Diesel.

The agreement will become effective Jan. 1, 1988, subject to government approval, according to the source.

Detroit Diesel's current product lineup includes diesel engines and heavy-duty transmissions for trucks, buses, construction, lumbering, mining and petroleum equipment plus marine and industrial applications. It also manufactures locomotive parts and precision bearings.

The factory in Redford Township (Mich.) produces heavy-duty diesel engines for over-the-road, off-highway, industrial and marine applications. Those powerplants include series 53, 71, 92, 149 and the new series 60 engines.

The series 60 engine was introduced last March, targeted primarily at the heavy-duty truck market. Detroit Diesel spent $300 million developing the engine.

GM will retain responsibility for the 8.2-liter diesel engine built in Romulus, Mich.; the 6.2-liter diesel engine manufactured in Moraine, Ohio; and the Allison transmission operation in Indianapolis. Currently, Detroit Diesel Allison has 43 domestic and seven Canadian distributorships, as well as sales offices in Australia, Singapore and several European countries.

Its money-losing diesel engine operations here had been offered for sale through a prospectus handled by investment banker Salomon Brothers (Automotive News, Nov. 2).

The deal with the company controlled by former race-car driver Roger Penske emerged after evaluation of other proposals, including a management group buyout proposal.

A joint venture with Deere & Co., similar to the ultimate Penske deal, collapsed in March.

Penske Corp., headquartered in Red Bank, N.J., owns a number of vehicle-related businesses, including a Detroit Diesel distributorship known as Penske Power.

Penske's billion-dollar Retail Automotive Group retails more than 30,000 new vehicles a year and recently acquired the Potamkin organization's Manhattan Cadillac dealership.

That gives Penske two of the highest volume Cadillac franchises, one on each coast, as well as ownership of Longo Toyota, the biggest Toyota dealership, located in El Monte, Calif.

Clenet's unique 4x4 stirs Chrysler interest

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors has its eye on California designer Alain Clenet's newly developed four-wheel-drive sport utility vehicle.

Clenet, best known for the neo-classic car bearing his name, said a prototype of the so-called Asha is running, following 2½ years of development.

Late last week, Clenet's Asha Corp. and C&C (Cars & Concepts) of Brighton, Mich., signed a letter of intent by which C&C would produce the vehicle, should it prove commercially feasible.

Clenet said he has developed a concept with low manufacturing costs that enables the 4x4 to be sold in the $7,000 to $10,000 range.

"We have talked with Clenet and the conversations are still going on," a Chrysler spokesman said. "We talk to a lot of people about different projects. Nothing has been decided with regard to the Asha."

Chrysler confirmed the discussions with Clenet after information about the possible venture was distributed to some press representatives in an unauthorized press release.

Clenet's Asha Corp. in Santa Barbara, Calif., and Chrysler said they do not know the source of the unauthorized press release.

Asha Corp. on Nov. 9 asked the U.S. Securities and Exchange Commission to halt trading of its stock following the disclosure and a sharp rise in the share price.

Asha's stock is traded on the Denver and Spokane, Wash., stock exchanges.

Asha Corp. was formed to develop the 4x4 designed by Clenet and his partner and noted auto artist, Mark Stehrnberger.

In an earlier interview (Automotive News, Oct. 27, 1986), Clenet said the vehicle will weigh between 2,300 and 2,500 pounds and is about the size of a Jeep CJ.

"All 4wd vehicles in the world are following in the tradition started by Jeep, using a rigid axle and a short wheelbase," Clenet said at that time.

The Asha, he said, "has more in common with a motorcycle than a Jeep or a tank."

In 1986, Clenet said it was possible that the vehicle would be completed in time for a late 1988 introduction as a 1989 model.

Clenet said last year that the secret to the low-cost design is longitudinal mounting of the engine and a transaxle combination in the center of the vehicle. Clenet said that with the transaxle pointing fore and aft, the output shafts are connected to small differentials at the front and rear to power all four wheels.

The system is designed to be full-time 4wd. Independent MacPherson struts provide the suspension all the way around. Clenet said this use of a front-wheel-drive powerplant eliminates the need for a transfer case and, when coupled with a suspension similar to those on fwd cars, manufacturing costs will be greatly reduced.

According to his plan, the vehicle would be powered by a 2.5-liter four-cylinder engine in normally aspirated and turbocharged versions providing 130 to 180 horsepower.

GM announces new chairmen at Vauxhall, Holden subsidiaries

John Bagshaw, chairman and managing director of General Motors' Vauxhall Motors division in the United Kingdom, has moved to the top job at GM's Holden subsidiary in his native Australia. He replaces Charles Chapman, who is retiring.

Bagshaw

Bagshaw, 62, has been replaced by Paul Tosch, 47, who temporarily retains his current duties as head of GM's Bedford commercial vehicles unit in Britain.

Vauxhall's sales and market share have declined recently in the United Kingdom, where it ranks third behind Ford and Austin Rover. However, GM officials insist that has no bearing on Bagshaw's departure.

Indeed, the 29-year GM veteran was seen as a driving force in Vauxhall's sales revival during the 1980s. He served as the division's marketing director beginning in 1981 and later was director of passenger car operations.

Before taking the top job at Vauxhall in February 1986, Bagshaw was executive director of sales, service and parts for General Motors' European passenger-car operations, then based in Russelsheim, West Germany.

Tosch, an American, had been with Bedford since January 1986. Previously, he was chief engineer for the Buick-Oldsmobile-Cadillac Group's Flint Product Team.

OBITUARIES

William Harvey III

DETROIT — William Harvey III, general manager of Motors Holding Division of General Motors for 26 years, died Nov. 5. He was 62.

Mr. Harvey spent his entire 38-year GM career with Motors Holding, which provides financial and management assistance to enable persons to become GM dealers. He joined Motors Holding in 1948 and served in field and headquarters assignments before becoming general manager Nov. 1, 1959. He retired in February 1986.

William Meakim Packer Jr.

PONTIAC, Mich. — William Meakim Packer Jr., 62, president of three new-car dealerships in Michigan and Florida, died Nov. 6. He was president of the Hundred Club, a non-profit organization that provides for dependents of police officers and firefighters who lose their lives in the line of duty. Packer Corp., of which he was president, also includes National Auto Leasing Co., Pontiac. Packer Corp.'s dealerships handle Pontiac, Cadillac and Honda.

INVENTORY

FROM PAGE 1

import-car sales as a whole continued at a record-setting pace for October.

The domestic-inventory unit count for October was the highest since Aug. 1, and the domestic days' supply was the highest since March 1. This year's domestic inventory is the heftiest for Nov. 1 since 1979. It is a complete reversal from a month earlier; on Oct. 1, stocks of new domestic cars were the slimmest in 12 months — 1,396,454 units for a 57-day supply.

Ford Motor Co.'s stock of U.S.-built cars on Nov. 1 was 13.92 percent larger than a month ago. Ford began November with a 72-day supply vs. a 46-day stock last month. A year ago, Ford carried a 56-day supply.

General Motors' stocks were equal to a 90-day supply on Nov. 1, up from a 62-day supply last month. GM began November last year with a 68-day supply of cars.

At the beginning of November this year, the days' supply of Cadillac Allantes fell to 233 from 497 on Oct. 1.

Chevrolet Corsica/Beretta, however, climbed to a 138-day supply vs. 52 on Oct. 1.

Chrysler Motors' stocks continued to rise. The company started November with a bulging 97-day supply vs. a 79-day supply a month ago. Last year, Chrysler had a 54-day supply on Nov. 1.

Honda began the month with a 10-day supply of U.S.-built cars compared with 11 days' worth a month earlier. It also had a 10-day supply of imports, compared to 14 a month earlier.

Toyota's stock of U.S.-built cars increased to 46 days vs. 33 days last month. But those cars make up only a fraction of its total inventory; Toyota's import-car stockpile stood at 27 days on Nov. 1, up from 24 the previous month.

Nissan's inventory of domestically produced cars rose to a 40-day supply vs. 29 days last month. Its imports stood at a 108-day supply, vs. 83 a month earlier.

Volkswagen's supply of U.S.-built cars grew to 89 days from 57 days on Oct. 1. It also had 69 days' worth of imported cars, up from 55 a month earlier.

Inventory numbers for domestics include finished cars at factories, those enroute to dealers and those on dealer lots. For imports, the cars are counted once they reach U.S. ports.

The domestic Nov. 1 inventory was split: GM, 54.88 percent; Ford, 24.57 percent; Chrysler, 17.81 percent; Volkswagen, 0.88 percent; Nissan, 0.77 percent; Honda, 0.64 percent; Toyota, 0.45 percent; and Mazda, which started production at Flat Rock, Mich., a month ago, a negligible share.

On Oct. 1, the domestic-car shares were: GM, 54.94 percent; Ford, 24.08 percent; Chrysler, 17.98 percent; Nissan, 1.02 percent; Honda, 0.77 percent; Volkswagen, 0.74 percent; and Toyota, 0.47 percent.

The domestic shares by size class on Nov. 1 were: subcompact, 11.21 percent; compact, 23.31 percent; intermediate, 44.25 percent; standard, 19.88 percent; and specialty, 1.35 percent.

The 56-day supply of imported cars compares with a 48-day supply on Oct. 1 and a 42-day supply on Nov. 1 last year.

Chevrolet's supply of imported cars was up significantly in October as sales fell. Unsold Chevrolet captives were up to a 163-day supply on Nov. 1, compared to a 90-day supply on Oct. 1.

Audi's supply of cars jumped from 47 days on Oct. 1 to 119 days. Most of that supply had yet to find its way to dealer lots, however, as the all-new 80/90 series was launched on Nov. 1.

Jeep-Eagle's inventory of imported Renault Medallion models fell slightly from a 279-day supply on Oct. 1 to a 272-day inventory on the first of this month. The Eagle inventory is far and away the largest in the business.

Acura, BMW, Honda, Hyundai, Toyota, Jaguar and Range Rover stayed just ahead of demand, according to the Nov. 1 figures.

Import-truck inventories edged up last month. Truck importers had a 66-day supply at the beginning of November. Import-truck stocks held a 53-day supply on Oct. 1. The year-ago figure for Nov. 1 shows a 69-day supply.

Toyota and Isuzu both suspended shipments of sport-utility trucks last month because of uncertainty surrounding a U.S. Customs Service ruling. Mitsubishi continued to ship sport-utility vehicles to the United States but expected to store the vehicles in a foreign trade zone until the customs issue is cleared up.

Despite the suspended shipments, Isuzu's inventory of trucks hit a 101-day supply, up from a 91-day supply recorded Oct. 1. Chrysler's import trucks had an inventory good for 100 days of sales.

The Nissan truck figure includes those built in the United States.

IMPORT DAYS' SUPPLIES

	Nov. 1, 1987	Oct. 1, 1987	Nov. 1, 1986

Corrections

The Insurance Institute for Highway Safety gave incorrect discounts for Prudential P&C in the chart in the Nov. 9 issue listing leading auto insurance companies with discount policies for using passive restraints. The correct discounts are 30 percent for the driver air bag, 30 percent for the full front air bags and 20 percent for automatic belts.

The Subaru Jo-Car pictured on Page 1 of the Nov. 2 issue was incorrectly identified as a Suzuki.

Acustar boss has a different approach to quality control

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

NOVI, Mich. — Quality is more closely related to the skill of the employees on an assembly line than to the quality control department.

Quality control professionals sometimes lose sight of the quality of a finished product when they focus too intensely on the methods of improving quality, according to Leroy H. Runk, president of Acustar Inc., Chrysler Corp.'s component manufacturing subsidiary.

Runk made his comments at a recent seminar of the Automotive Division of the American Society of Quality Control here.

"The easy approach is to say that 'world-class quality' is the price of admission and is the result of total dedication to quality, process control, simultaneous engineering, etc., etc. It is one thing to know the buzzwords and another to implement them," Runk said.

"The profession of quality control is reaching its zenith. There is a prescribed approach to quality, and both the practitioners and practitionees know the words to say. In some cases, system acceptability is confused with quality acceptability."

Runk: "Quality is inversely proportional to the strength of the quality control department."

During his years with Chrysler, Runk was a quality engineer and on several occasions found that plant quality improved when the quality control team was given less say in the operation of the plant.

"Early in my career, I was a quality engineer working in a plant with the highest quality," he said. "Any time there was a problem in the plant, the quality control department was called in. Then it was determined that the plant would be closed in about a year. They peeled the quality control team from that plant and put the talent in the new plant.

"What happened? Quality in the old plant improved 40 percent in the next five months. For the first time, the people who were responsible for the product truly felt responsible for the product," he added.

Based on his experience, Runk formulated this maxim: "Quality is inversely proportional to the strength of the quality control department."

In the same way that line employees must be responsible for their products, so must the company, Runk said.

Last May, Chrysler formed Acustar as a wholly owned subsidiary. The company functions as an autonomous company and must compete with other component suppliers for Chrysler and other industry business.

"The idea is that the company is responsible for its own future," Runk said.

It has been suggested within Acustar that it must hire quality control employees in order to compete since Acustar does not have a quality control department at its headquarters. Runk doesn't agree.

"My view is that if we are serious, we stop lines when we are making junk, sort 5,000 parts to find three bad parts, rebuild machines when they need it and refuse to accept materials that don't meet our standards," Runk said.

"We aspire to be a world-class automotive supplier and the pre-requisite is quality," he added.

"Our concern is that the working stiffs see experts too closely controlling them. We can take the Mother Theresa or the Tammy Bakker approach. We choose the Mother Theresa approach. Mother Theresa facilitates progress by digging into the trenches and multiplying her influence."

At Chrysler's component operations, Runk said, quality improved 18 percent in the 1985 model year, 22 percent in 1986 and 25 percent in 1987, comparing year-to-year warranty reports.

To explain those figures, if the company built 100,000 parts in 1985 and 1,000 were defective, then in 1986, only 780 would be defective, based on a 22 percent improvement.

Acustar's goal is to improve quality by another 25 percent in the 1988 model year.

"A 20 to 25 percent chunk is always a goal," Runk said. "We'll never get to a point where there isn't improvement that can be made."

RUST

Dealers divided on extra treatments

DETROIT — Automotive News recently made an informal survey of auto dealers to see if manufacturers' claims of improved sheet-metal corrosion resistance jibe with field experience.

Most respondents said corrosion resistance has improved. However, they were divided on the need for additional rustproofing.

A Northeast Chevrolet dealer said, "The cars of today do not have the rust problems that had been prevalent in the past. We rustproof only if a customer insists."

A Northeast Saab dealer said, "Saab automobiles appear to be more resistant to corrosion. Additional rustproofing is not necessary."

A Northwest Ford service manager said some trucks are showing rust problems and recommended that new-car customers purchase rustproofing treatment.

AUTOMOTIVE NEWS JOE WILSSENS

Dealers: New-car sheet metal has improved since this car was built in the 1970s

A Mountain States Chevrolet dealer said, "Underseal is a good investment. We feel that paint and sheet metal have improved with the 1988 product."

A Buick dealer in that area also said rustproofing is a good investment.

And a Northwest Lincoln-Mercury dealer said manufacturers' rustproofing is sufficient.

Ford and Chrysler offer their dealers rustproofing treatment to sell to customers.

General Motors does not sell a rustproofing treatment to its dealers, and its car and light-truck warranty advises customers that additional rustproofing treatment is not necessary.

Shop volume up for 4th month in a row

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The Automotive News Service Index showed its fourth consecutive year-to-year monthly increase in September.

Service and parts business at new-car dealerships during September rose 5.0 percent over the September 1986 figure.

In August, the Service Index increased 0.8 percent over the year-ago month; in July it climbed 6.1 percent; and in June it was up 5.9 percent.

Shop business during the first nine months of 1987 was up 2.9 percent over the same period in 1986.

Dealers attributed the rise in service business in September to increases in cost per repair and to higher shop volume as a result of strong new-car sales.

A Southern Volkswagen dealer said business "increased in dollars while the number of repair orders declined. We have a higher labor rate."

A Chevrolet dealer from the Rocky Mountain area also said his sales and gross profit increased while the number of repair orders went down.

A Northeast Chevrolet dealer said, "Last year's favorable interest rates and high sales have provided increased service business."

SERVICE INDEX
105.0*

	Sept. '87 vs Sept. '86	9 mos. '87 vs 9 mos. '86
Gross Profit on All Labor and P&A Sales	+5.3%	+5.8%
Repair Orders Written	−1.5%	−2.2%
Total Labor Sales (Customer & Warranty)	+6.7%	+2.3%
Shop Parts Sales (Customer & Warranty)	+10.7%	+3.7%
Sales of All P&A	+3.7%	+5.0%

* Survey by Automotive News shows that dealers' service and parts business in September 1987 was 105.0 percent of business in September 1986. Service business in the first 9 months of 1987 was 102.9 percent of business in the corresponding period in 1986.

Shop parts sales (customer paid and warranty) led all indicators during September with an increase of 10.7 percent over September 1986.

Total labor sales (customer paid and warranty) climbed 6.7 percent; gross profit on all labor, parts and accessories sales rose 5.3 percent; and sales of all parts and accessories were up 3.7 percent over the year-earlier month.

Repair orders written fell 1.5 percent in September.

Parts and accessories sales to off-premises customers also declined in September, down 0.9 percent.

Sales of all parts and accessories were up 5.0 percent; shop parts sales increased 3.7 percent; and total labor sales were up 2.3 percent.

Parts and accessories sales to off-premises customers were up 6.0 percent for the first nine months of this year compared to the same period last year.

Chrysler alters prices on service contracts

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors has cut prices on some service contracts to better supplement the powertrain warranties offered by Jeep-Eagle and competing manufacturers. The dealer price of Chrysler's most popular service contract, however, has been increased.

Chrysler has also added Jeep-Eagle dealers as authorized dealers for its service contracts. Chrysler service contracts are available for most makes of new and used cars.

Chrysler has cut dealer and suggested retail prices on a number of its service contracts, according to James S. Freers, manager of Chrysler service contracts.

The dealer price for Chrysler's 5-year/50,000-mile Custom Plan covering powertrain and major components was cut 8 percent. The additional charge for four-wheel-drive models covered by the plan was reduced 14 percent.

The Custom Plan is favored by customers of makes other than Chrysler. Prices were reduced because competing car companies have in many cases increased their powertrain-warranty coverage, Freers said.

The price-cuts also take into account the addition of Jeep-Eagle dealerships as Chrysler service contract dealers, a spokesman noted.

Chrysler declined to disclose the dealer prices. However, as an example of the suggested retail price reductions, a Custom Plan for a Renault Medallion had been $595 for a 6-year/60,000-mile contract. That plan now has a suggested retail price of $565 for a 7-year/70,000-mile contract.

Although the majority of Chrysler service contracts are sold for Chrysler-built cars, other dealers can order a service contract for their customers through a Chrysler-Plymouth, Dodge or Jeep-Eagle dealer. Chrysler authorizes repairs at competing dealerships and independent garages.

The dealer price of the Exclusive Coverage service contract for 1988 New Yorker and New Yorker Landau models has been reduced 32 percent, compared with prices for 1987 New Yorker models. The 1987 prices still apply to 1987 New Yorkers because the standard warranty coverage doesn't match that of the new model.

The suggested retail price of Exclusive Coverage for a 1988 New Yorker or New Yorker Landau is $445 compared with $695 for a 1987 New Yorker, a 36 percent price cut.

The company has increased the dealer price by 15 percent on its 7-year/70,000-mile Added Coverage Plan. That plan is Chrysler's biggest seller, according to Freers, and covers such components as steering, brakes, air conditioning and front-suspension systems. In effect, the plan "wraps around" Chrysler's 7-year/70,000-mile powertrain warranty.

The suggested retail prices for the Added Coverage Plan did not change.

Chrysler also introduced a low-priced 3-year/30,000-mile Added Coverage Plan aimed at customers who trade their cars frequently. The suggested retail price of that plan is $195.

Chrysler also will continue to offer a basic powertrain service contract. "A few dealers said they would like to continue with powertrain coverage so we've extended it. Eventually, we think it will go away," Freers said.

In addition to making service contract price changes, Chrysler discontinued the sale of the service contracts previously offered by American Motors on AMC, Jeep and Renault products. Existing contracts will be honored by Chrysler, a spokesman said.

Jeep-Eagle dealers are now eligible to become authorized dealers for Chrysler service contracts.

Although the length of warranties has been increased, Freers noted that the service-contract business through October 1987 was up over the same period last year. Through October, service-contract penetration was up 10 percent for new-car customers and 13 percent for used-car customers, he said.

Senate bill would double gas guzzler fine

By Bill Sternberg
CRAIN NEWS SERVICE

WASHINGTON — Eight senators are pushing legislation that would double the gas-guzzler tax on certain imported cars. The money would be used to expand a tax break for employer-provided mass transit fringe benefits.

Sen. Alfonse D'Amato, R-N.Y., plans to offer an amendment on the Senate floor to quadruple the limit on tax-free transit benefits from the current $15 a month.

To recoup the estimated $400 million this would cost the government over the next five years, the amendment would double the special excise tax levied on new cars that do not meet federal gas mileage standards.

"It's a terrific issue," said an aide to D'Amato. "What better group is there to tax? Who's going to fight for Lamborghini owners?"

Manufacturers, importers and dealers of the cars subject to the gas-guzzler tax are not as enthusiastic about the proposal.

"Our feeling is it would not be a good idea," says Kathleen Varley, vice president for public affairs at the American International Automobile Dealers Association. "It will depress sales dramatically."

Automobiles that are currently subject to the gas-guzzler tax include certain models from Aston Martin, BMW, Mercedes-Benz, Ferrari, Jaguar, Porsche, Volvo and Lamborghini.

The tax ranges from 0.7 percent to 3.5 percent of the sales price, or about $1,500 in the case of a BMW 750, Mercedes 560 SEL or Jaguar XJ-S.

Domestic cars have never triggered the tax. Four-wheel drive and off-road vehicles are exempt.

"I think it's excessive taxation," said Adam Stern, manager of a Lamborghini dealership in Manhattan. Buyers of low mileage cars already have to spend more for gas at the pumps and should not be penalized again at the time of purchase, he said.

Prospects for D'Amato's amendment are uncertain. Eight senators — including both from New York, California and Connecticut — are circulating a letter urging their colleagues to support the measure.

While few senators are likely to stand up in support of Lamborghini owners, many might think of other uses for the estimated $400 million the proposal could raise.

The amendment would be attached to a so-called budget reconciliation bill, the fate of which is tied up with high-level negotiations to reduce the federal deficit.

Certain lawmakers have long fought to put employer-provided transit benefits on an equal footing with parking benefits, which are fully non-taxable.

Under the current law, the tax-free reimbursement a business can provide to workers who use mass transit is capped at $15. Moreover, if an employer pays more than $15, the entire benefit becomes taxable.

The version of the reconciliation bill that has already passed the House contains a provision added by Rep. Charles Rangel, D-Manhattan, removing the $15 "cliff."

Under this provision, the first $15 subsidy would remain tax-free, even if an employer pays more.

D'Amato's amendment would go even further by making the first $60 a month tax-free as a way to encourage more businesses to offer larger transit fringe benefits to their workers.

Differences between the House and Senate bills will have to be resolved in a conference committee. If the Senate rejects D'Amato's amendment, mass transit advocates will have less flexibility in the conference committee.

There is some speculation, therefore, that D'Amato may offer, discuss and then withdraw his amendment if it looks like it is going to be a loser.

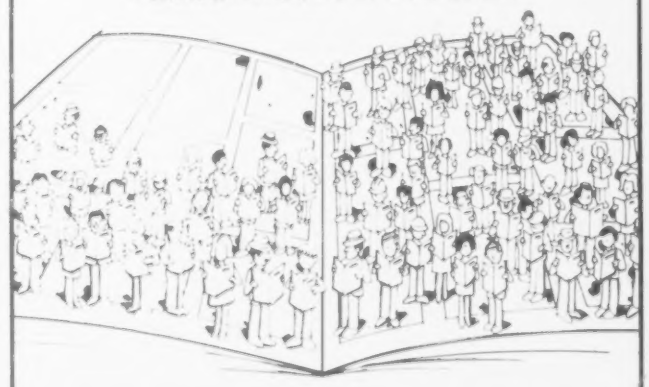
Why rely on word-of mouth when you can build a crowd in the back of Automotive News?



Auction advertising builds strong auction traffic.

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you get a big regional — or even national — attendance with an ad in the Auction Directory.

The Automotive News Auction Directory is a tried-and-proven tool for auctions looking to build attendance or promote a special function. That's what keeps our auction advertisers coming back for more. More results. When you want results . . .

Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

Production cuts due early in '88

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Because of slow sales, Chrysler Motors will cut back production at the beginning of 1988, and Volkswagen of America may close its U.S. plant for up to four weeks early next year.

General Motors plans to idle its Detroit-Hamtramck plant for three weeks in January to retool for the 1989 Buick Riviera.

UAW officials at two Chrysler assembly plants said last week that the company expects to reduce production schedules in January due to lagging sales of some models.

William Douglas, president of UAW Local 1183 at the Chrysler Newark, Del., assembly plant, said the plant will shut down for the holidays Dec. 23 and resume output on one shift instead of two on Jan. 18. The change will affect 1,700 hourly workers.

Newark assembles the Plymouth Reliant and Dodge Aries, Chrysler LeBaron sedan and Chrysler Town & Country station wagon.

Aaron Taylor, president of UAW Local 7 at the Chrysler Jefferson Avenue assembly plant in Detroit, said the union has been notified that the line speeds at the plant may be reduced in January from 67 jobs per hour to 55 jobs per hour, affecting 300 to 500 employes.

The Jefferson Avenue plant builds the Reliant and Aries, the Dodge 600 and the Plymouth Caravelle.

Volkswagen is considering shutting down its Westmoreland, Pa., plant for up to four weeks early next year due to slow sales of Golf, GTI and Jetta models.

The first shutdown would likely take effect in early January, extending the normal holiday closing by as much as two weeks, a plant spokesman said. VW also may close the plant for an additional two weeks in March.

A decision is expected next month.

GM will extend the Christmas holiday for 2,500 workers at its Detroit-Hamtramck plant to re-tool for the 1989 Buick Riviera.

The plant, which assembles the Riviera, Oldsmobile Toronado and the Cadillac Eldorado, Allante and Seville, is slated to resume output Jan. 25. However, production of the Riviera is not scheduled to begin until the fall of 1988.

Last week's targeted domestic auto production of 157,255 dipped slightly (0.50 percent) from the previous week's 158,044 and was 10.98 percent below the year-ago week's 176,658.

So far this year, 6,274,893 cars have been assembled, 9.33 percent below the 6,920,309 completed last year at this point.

Companies shared last week's scheduled output as follows: GM, 53.06 percent; Ford Motor Co., 26.25 percent; Chrysler, 11.73 percent; Honda of America Manufacturing Inc., 4.42 percent; New United Motor Manufacturing Inc., 2.23 percent; VWoA, 1.27 percent; Nissan Motor Manufacturing Co. U.S.A., 0.83 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.21 percent.

Overtime was slated last Saturday at GM's Lordstown, Ohio, plant.

All Ford plants except Edison, N.J., are scheduled for daily overtime this week.

Chrysler's St. Louis (No. 2) plant was slated for overtime last Saturday. The plant is scheduled for daily overtime this week.

Canadian car output climbs for week

Canadian auto production of 23,102 cars last week was 9.74 percent more than the previous week's 21,052 and 2.43 percent more than the year-ago week's 22,554.

So far this year, 682,070 cars have been assembled, 26.54 percent below the 928,458 completed last year at this point.

Truck production was targeted at 18,155 units last week, 9.93 percent more than the prior week's 16,515 and 72.71 percent more than the year-ago week's 10,512.

Year-to-date, 715,147 trucks have been built, 2.62 percent more than the 696,884 assembled last year at this time.

As reported earlier, Chrysler Motors' Bramalea, Ontario, plant is idle because of quality problems. Chrysler has not announced when the plant will reopen.

Truck build rises to 80,195

Domestic truck production totaled 80,195 units last week, 4.93 percent more than the prior week's 76,424 and 10.30 percent above the year-ago week's 72,709.

Year-to-date, 3,363,849 trucks have been assembled, 7.25 percent more than the 3,136,463 built last year at this time.

Overtime was slated last Saturday at GM's Moraine, Ohio, plant.

Ford scheduled overtime last Saturday at its Lorain, Ohio, plant. All Ford truck plants are scheduled for daily overtime this week.

Saatchi picked for Lexus ads

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Toyota Motor Sales has appointed a new advertising agency formed by Saatchi & Saatchi DFS to handle its Lexus Division luxury car line.

The new agency, called Saatchi & Saatchi Group One, has been created specifically for the Lexus Division. It will operate separately from Toyota's agency, Saatchi & Saatchi DFS.

Robert McCurry, Toyota Motor Sales senior vice president, said "with Group One we get the best of both worlds — an immediate and knowledgeable start-up, a separate agency staffed solely for Lexus and the $2.2 billion media buying clout of Saatchi & Saatchi DFS." McCurry made it clear that while other agencies made inquiries about Lexus, the company did not have meetings with other agencies.

Stuart Upson, chairman of Saatchi & Saatchi DFS, said the company will "build a super agency" in California. Upson said that to his knowledge this is the first time an agency has been created to sell a specific product.

Toyota announced formation of the Lexus Division in August. The line of luxury cars will be introduced in 1989 and will be sold through a separate franchise. Initial plans call for approximately 100 dealers.

Two models will be introduced, the car first falling into the $30,000-price range and the second in the mid-$20,000 range. The company anticipates selling 30,000 units during the first year.

Wichita firm offers $2 million in stock

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The era of car-dealer public ownership has arrived, not with a front-door megadealer bang in Detroit, but with a quiet back-door entrance in Kansas.

Steven Motors Inc., a Wichita company owned by father-and-son car dealers Edward M. Steven, 69, and Michael E. Steven, 45, filed an S-18 registration statement with the Securities and Exchange Commission for a $2 million stock offering.

Proceeds will be used to acquire assets from another of their companies. Those assets include Rolls-Royce, Yugo, Bertone and Maserati franchises.

The Stevens also intend to acquire other franchises for the publicly held company, the preliminary prospectus said.

Although the face value of the offering is not large by any standard, the impending public ownership of a new-car franchise is the first.

"The significance goes well beyond the dollar value of the offering," said William Prior, Yugo America president.

Although the preliminary prospectus warned that factory approval is required, neither Rolls-Royce nor Yugo last week said they had objections, despite a harder line set by some of the domestic companies.

"It's not a problem for us," Prior said. "It's easy to be courageous

Perot, left, lashes out at GM's "power-hungry" management, particularly Johnson, right

PEROT:

EDS founder blasts GM's Johnson, ponders forming new high-tech firm

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Less than a year after he was ousted from General Motors, H. Ross Perot said he may start a new high-tech company if his former colleagues at Electronic Data Systems abandon the auto company.

Perot made the announcement last week while lashing out at GM's "power-hungry" management, in particular GM Executive Vice President Elmer Johnson, the man many say is likely to be GM's next chairman.

Perot had been reticent to talk about GM for the past year. The terms of GM's $750 million buyout of his GM stock last December mandated his silence and took away his seat on the GM board and the chairmanship of EDS, the company he founded. The deal came after Perot's repeated public criticism of GM.

Perot told Automotive News in a telephone interview from Dallas last week that he decided to break his silence after what he called a year of "personal attacks" on him, primarily by Johnson.

Handpicked by GM Chairman Roger B. Smith, Johnson joined GM four years ago as legal counsel. He quickly climbed to vice president and in May was named executive vice president in charge of some of GM's most important staffs. Since his most recent promotion, Johnson's name has been frequently mentioned as a candidate for chairman, succeeding Smith who is slated to retire in 1990.

Johnson also orchestrated the controversial buyout of Perot.

"Elmer has been aiming personal attacks at me for a year, and I've had enough," Perot said.

The last straw, Perot said, was a speech Johnson gave at a Michigan college in which he called the battle between Perot and GM a case of an entrepreneur selling his company and discovering he could no longer call the shots. Johnson further said that the wisdom of the buyout was confirmed by the increased value of GM's stock after the buyout, even though GM

Big 3 cut output plans for early '88

By Michelle Krebs, Kathy Barbaglia and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — General Motors and Chrysler Motors are trimming their 1988 first-quarter production schedules by extending some Christmas vacations and lowering line speeds at selected plants.

Between the two companies, 10 U.S. assembly plants and more than 15,000 workers will go on temporary or permanent layoff.

The adjustments in the schedules were expected because of slow sales and high inventories at both companies.

In addition to reductions already announced, more adjustments likely are to be made to the first-quarter production schedule, and more cuts are possible during the remainder of this quarter.

Present schedules show the Big 3 automakers planning to build 1,630,575 cars in the first quarter of 1988, down 13 percent from the 1,874,510 cars produced in the first quarter this year.

GM announced last week it is reducing the line speed by five units per hour at its Corvette plant in Bowling Green, Ky., when workers return from the Christmas break Jan. 4. About 225 of the plant's 1,300 employees will be affected by the scheduling change.

GM's Pontiac Fiero plant in Pontiac, Mich., will have Christmas vacation extended by two weeks. When it resumes production on Jan. 18, the line speed will be reduced by five units per hour, causing about 80 of the 1,200 employees to go on indefinite layoff.

The line speed at GM's Lansing, Mich., plant, which assembles the Buick Skylark and Oldsmobile Cutlass Calais, will be cut by 12 units per hour beginning Jan. 25. About 850 of the plant's 4,350 workers will be placed on indefinite layoff.

GM previously had said it plans to idle its Detroit-Hamtramck plant for three weeks in January to retool for the 1989 Buick Riviera, which will be stretched 9.5 inches. The plant,

Volvo battles falling dollar

U.S. supply, production possible, but 480 suffers

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STOCKHOLM, Sweden — Volvo may cancel plans to introduce its Dutch-built 480-ES coupe in the United States due to the sharp drop in the dollar against the Dutch guilder.

But the dollar's fall also means that Volvo is seeking to buy more components from American suppliers.

It might even consider passenger-car production in the United States if conditions warrant, AB Volvo Chairman Pehr Gyllenhammar said in an interview.

Gyllenhammar said there is currently no date set for the oft-delayed U.S. launch of the front-wheel-drive 480. The decision is being held in abeyance because of the currency fluctuations, he said.

Cancellation of the 480 program would be a severe blow to Volvo Car BV, the Dutch government-controlled automaker that has counted on breaking into the U.S. market through its Swedish partner's substantial retail network. The Dutch company is 30 percent owned by Volvo in Sweden.

Gyllenhammar said increased parts sourcing in the United States is a logical consequence of shifting currency rates and an improved ability of U.S. suppliers to meet Volvo's specifications.

"We think it would be natural and are looking at ways of sourcing more and more in the United States," said Gyllenham-

Gyllenhammar: No date for 480's U.S. launch

VW to shut U.S. plant by end of 1988 run

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Volkswagen of America's decision to close its Westmoreland, Pa., assembly plant after 10 years of production marks the end of the first modern attempt by a foreign manufacturer to build cars in the United States.

VWoA will phase out operations by the end of the 1988 model year.

The fate of the plant had been a matter of speculation for years once the demand for the VW Rabbit disappeared in the early 1980s. Production volumes have since slipped to the point where VW now uses about a third of the plant's capacity.

On the other hand, the decision seems to fly in the face of the thinking that is prompting Asian makers to build in the United States to take advantage of the weaker dollar.

The corresponding increased strength of the

Incentives take aim at '87 leftovers

By Laura Clark
and Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTERS

Saddled with bloated inventories of 1987 models, Chrysler Motors broke the silence on large-scale, consumer incentive programs last week by offering cash rebates and low-rate financing on some of its Chrysler and Dodge cars and trucks.

Ford Motor Co., Nissan Motor Corp., American Isuzu Motors and Mitsubishi Motor Sales of America announced dealer incentives on 1987 and 1988 cars and trucks.

In addition, Peugeot Motors of America expanded its $4,000 rebate to owners of diesel cars who purchase Peugeots. The offer now includes owners of any make of diesel auto, not just Peugeots.

Chrysler is offering both a $770 rebate and low financing rates — either 7.7 percent for 48 months or 9.9 percent for 60 months — on seven 1987 vehicles. They are Dodge Daytona, Lancer and four-wheel-drive and two-wheel-drive versions of the full-sized Ram pickup; and Chrysler LeBaron coupe, convertible and LeBaron GTS.

The program began Nov. 18 and has no expiration date. Customers may purchase or lease but must take delivery of the vehicle during the program. No dealer financial participation is required.

"We want to make our 1987 models as attractive to consumers as we have made our 1988 models by our pricing action (announced last week)," said E.T. Pappert, group vice president of sales.

Chrysler's previous incentives remain in effect. They include: $500 rebate on Dodge mid-sized and full-sized trucks except the Dodge Ram; $1,000 rebate or low-rate financing on Plymouth Reliant and Dodge Aries until Dec. 31; 15 million rebate coupons mailed to selected Chrysler Motors owners and competitive-make owners on selected 1987 and 1988 vehicles; and dealer and salespersons' incentives on 1988 and earlier Renault cars and 1988 Jeeps.

Ford and Lincoln-Mercury dealers are receiving cash on 1987 and 1988 Taurus/Sable, Escort/Lynx and Tracer models sold or leased between Oct. 15 and Dec. 2.

Each dealer has been given a quota, based on planning volume.

Dealers who meet 0 to 30 percent of their objective receive $300 per

Stempel: "I can't ever remember a time in our business when the customer has been in the driver's seat like he is right now."

1988 market volatile

'Expect about anything,' Stempel says

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — General Motors President Robert C. Stempel predicted near-record sales of 4.8 million trucks in the 1988 model year, but he still found a great deal of murkiness in the overall sales outlook.

Stempel, in a keynote address to an SAE Truck & Bus gathering, predicted that light trucks would account for 95 percent of the 4.8 million sales and that medium- and heavy-duty truck sales would be "robust" if the economy improves.

But Stempel subsequently told reporters that there was "enough volatility" in the automotive market to "expect about anything."

GM itself is adding overtime to some production schedules and looking at cutbacks elsewhere in its organization.

"It's a very mixed bag," Stempel said. "It depends on the car or truck model, and it depends on your inventory. It's really vacillating. It really goes to all the volatility in the marketplace. Some segments have a great deal of uncertainty. Others (we're) almost blase about. And that is what's so difficult to sort out."

He also noted that:

- GM is "absolutely" examining more parts of its operation for potential joint ventures and divestitures.

"We're interested in our profits, in having a successful, strong business now and into the future," he said. "To do that, we cannot run units that are red, units that are losing money. Our objective is not to sell them, (but) to get them competitive. Those that aren't, we'll joint venture, divest or close."

- Getting back the 40 percent share of the car market GM had in the 1986 model year will be a "tough reach" this year. GM's share dropped to 37 percent in the 1987 model year.

"I can't ever remember a time in our business when the customer has been in the driver's seat like he is right now," Stempel said. "The choice in a given price range is phenomenal. That says every tenth of a point in market share in cars is going to be very, very tough."

- The initial reception of the Buick Regal had been good. GM had built a little over 20,000 Regals as of last Monday. It had a good supply of orders on hand, and dealers have reacted favorably to the price, content and quality of the car.

However, Stempel noted that the stock market crash had been "eradicating" launch advertising on the Regal: "I wish we'd pick a good time (coinciding with an upbeat market) to launch a car."

- GM has about 31 percent of the truck market, and its goal is to get roughly a third of that market this year. GM, while focusing on profitability, will fight tooth-and-nail for sales.

"Our prime business is not electronic data. It's not space, not missiles. It's cars and trucks. And to stay in cars and trucks, you absolutely have to be profitable," Stempel said.

"This is a highly competitive business. And each one of our cars and trucks are sold one at a time. And you don't see anybody blinking in this business. There aren't any sissies around here."

Chevrolet, Chrysler cut some '88 prices

By Mary Connelly and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Chevrolet has discounted option packages on its hot-selling Corsica and Beretta models, in essence slashing prices of those cars $500 to $1,200. Less significant reductions have been made on Celebrity models.

Meanwhile, Chrysler Motors last week announced firm prices on its 1988 models, saying prices for its domestic cars average one percent below those of comparably equipped 1987 models.

The company cut the prices on four 1988 models, which Chrysler said represented 42 percent of its domestic sales volume in the 1987 model year.

Firm prices for Eagle cars have not been announced.

Chevrolet announced its Corsica/Beretta pricing strategy to dealers Friday. Called the "Option Pricing Discount Program," it knocks off different amounts from the retail price depending on what option package is on the car.

The price on a Corsica equipped with a base option package has been cut by $500. Models equipped with second- and third-level option packages get a $1,000 price reduction. Package No. 4 gets a $1,200 reduction.

The reductions on the Beretta option packages range from $500 to $1,100.

In most cases, the recent price cuts offset the tentative price increase instituted at the start of the model year, putting Corsica and Beretta prices almost back to where they were when the cars were introduced in January.

Chevrolet has increased the discount on the most commonly ordered option packages on 1988 Celebrity models from $400 to $700.

The discounts apply to cars in dealer stocks Nov. 19 and on cars ordered. The program expires March 31. There is no dealer-participation cost involved. Chevrolet is in the process of sending new pricing stickers to dealers.

As of midday Friday, no other General Motors division had announced similar pricing moves. GM, however, has issued only tentative prices for the 1988 model year.

Chrysler's prices were finalized last week. Chrysler dealers, too, had been working with preliminary prices since the model year began in early October.

The company said that on a sales-weighted basis, the base prices of its 1988 cars are an average of 1.7 percent, or $195, higher than 1987 models without adjusting for equipment changes.

Chrysler reduced prices of the base Chrysler LeBaron coupe, all three versions of the Dodge Daytona and all versions of the Plymouth Reliant and Dodge Aries sedan and wagon.

The price of the base LeBaron coupe was cut 2.6 percent, from $11,295 for the 1987 model to $10,995 for 1988. The premium version rose 13 percent — from $12,288 to $13,995 — reflecting additions in standard equipment.

"It's a good old-fashioned price cut," said Omar Matt, Chrysler manager of pricing and competitive analysis, about the LeBaron coupe reduction. "We're getting aggressive with that car and going after market share. We think reducing the price is the way to attract customers to it."

The LeBaron convertible will be offered in two versions in 1988. The single model offered in 1987 was priced at $13,974. The base 1988 model is $13,495, and the premium version has more standard equipment and is priced at $17,495.

The three Daytona models will be priced lower in 1988 than in 1987. However, in preliminary pricing, Chrysler had planned to raise the price of the sporty hatchbacks.

The price of the base Daytona dropped 8 percent from $9,799 in 1987 to $8,995 in 1988. The Daytona Shelby Z is priced at $12,601, down 1 percent from $12,749 in 1987. The Daytona Pacifica also dipped 1 percent, from $13,912 in 1987 to $13,750 in 1988.

The company raised the sticker on its price-leaders. Dodge Omni America and Plymouth Horizon America increased 3.3 percent from $5,799 to $5,995.

Chrysler also raised the price of Plymouth Sundance and Dodge Shadow.

The Shadow two-door climbed 6 percent from $7,499 to $7,995. The Shadow four-door went up 7 percent from $7,699 to $8,245.

The Sundance two-door is priced at $7,995 for 1988, up 5 percent from $7,599 in 1987. The Sundance four-door carries a base price of $8,245, up 5 percent from $7,799.

As announced earlier, Chrysler will market its Aries and Reliant

GM requests rollback of '85 CAFE standard

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors has asked NHTSA for a retroactive rollback of the 1985 corporate average fuel economy standard — the only time the standard reached the 27.5 mpg statutory limit.

GM would like the 1985 standard rolled back to 26 mpg in order to use carry-forward credits.

James D. Johnston, GM vice president, industry-government relations, has told NHTSA administrator Diane Steed that GM is convinced rulemaking to amend the 1985-model-year CAFE is "warranted."

Last August, Mercedes-Benz of North America asked NHTSA to roll back CAFE standards for the 1984 and 1985 model years. NHTSA has not yet responded to that petition. The GM petition asks for relief for only the 1985 model year.

Ford is not expected to petition NHTSA for a rollback, although it is understood Ford will not oppose the move taken by GM and Mercedes-Benz.

The GM situation is ironical. When the company was facing enormous penalties, it did not try to get a retroactive rollback. It was not considered even a legal possibility until Mercedes surprised the industry by its request.

Mercedes' plea for relief was based on market factors — that its planned sales of diesel cars did not materialize because customers preferred gasoline-powered models.

Undoubtedly, GM's position is similar. With soft GM sales, high inventories throughout the industry and an unstable stock market, GM may feel the need for a back-up in case it is stuck with fuel-efficient cars at a time when it is selling only cars with big engines. If that were to occur, GM's plan for carryback credits could come unglued.

NHTSA recently approved a carryback plan presented by GM to wipe out its liability for not meeting the 1985 CAFE. Nevertheless, GM would like that year's standard rolled back to earn even more credits.

The GM plan approved by NHTSA Oct. 13 involved using expected credits on GM domestic fleets from model years 1986, 1987 and 1988.

NHTSA also approved a similar plan for Ford on May 4. The carryback plan was to use expected credits from the 1986 model year for the company's domestic fleet and to apply expected 1988 credits to 1985-1987-model-year import fleets. While the Tracer is a fairly fuel efficient car, Ford's other imports for its Lincoln-Mercury Division, the Merkur Scorpio and XR4Ti, are not considered efficient.

The situation that existed in late 1985 has changed enormously. That was before NHTSA rolled back the CAFE standard for 1986 models. It later changed the CAFE standards for 1987 and 1988 models from 27.5 to 26 mpg.

Cummins' new concept vehicle features low floor, monocoque design

Cummins prototype designed for bakers

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

WARREN, Mich. — Cummins Engine Co.'s Vehicle & Power Systems Engineering Division, aided by a concept from two former General Motors executives, has created a radically new prototype vehicle that was the focus of attention at a recent American Bakers Association convention.

The vehicle could represent Cummins' entry into the truck-building business.

The company is expected to decide by March whether it will produce the vehicle, license it out to a bodybuilder for production or return it to its original designer, Donald L. Manning Associates here.

Manning Associates is a professional design and engineering company headed by Donald Manning, a former chief engineer of GM Truck & Bus who retired in 1975. Raymond Prussing, former general sales manager for Detroit Diesel Allison and former president of Isuzu Diesel Engine of North America, helped Manning on the project.

The RT-1010 concept vehicle offers a revolutionary design for the Class 2-6 walk-in van market, including bread trucks and parcel delivery vehicles.

It is also adaptable to use as an ambulance, mobile tool sales truck, small transit and handicapped person bus, airport bus and motor home.

The vehicle's cargo floor is 21 inches above the ground, loaded or unloaded, which is 11 inches lower than current industry vehicles.

The lower cargo floor, achieved with a specially designed air suspension and dead axle system with a body-mounted differential, makes it easier for the driver to climb into and makes the vehicle less likely to roll over in an accident.

The air suspension allows the vehicle's floor to be lowered to 16.5 inches above the ground for deliveries or raised to 25.5 inches to maintain loading dock compatibility, according to Seppo Saarinen, general manager of Cummins' VPE operation.

The suspension and wide rear spring centers also provide a more comfortable ride.

The vehicle features an integral, monocoque (frameless) design with space-frame stainless steel construction. That allows it to be produced with a minimum fixed investment, while giving it great dimensional flexibility, Saarinen added.

It easily can be produced in various gross vehicle weights as well as various lengths, widths and wheelbases.

The concept vehicle is 300.7 inches long, 107.9 inches high and 96 inches wide. Wheelbase is 178.3 inches. However, it is composed of 60-inch modules. A specialty manufacturer could remove one or more modules or sections to shorten the vehicle without any major effort or investment.

Its GVW can be changed simply by substituting a different axle capacity, different tires and springs.

In spite of its low floor, its breakover angle and departure angle are virtually the same as current-market vehicles.

Its design flexibility, and particularly the lower floor, would enable companies in various industries to offer unique products to their customers.

The vehicle has a composite fiberglass skin. The all-bonded plastic, rivetless exterior, together with the stainless steel frame, make it corrosion resistant and reduce repair costs.

Basically, the vehicle meets all the American Baking Association's criteria for safety, productivity, dependability and cost effectiveness.

It took only six months to design and construct, a process that normally takes two years.

Greg Davies, executive director of the RT-1010 project for Cummins, said the engine manufacturer decided to build this concept vehicle because Cummins had "grown closer to the ABA" through the association's increasing use of Cummins 4BT engines.

"We are also building an engineering services business around the design and development of vehicle systems," Davies said.

"When the ABA approached us, we felt this would be an excellent opportunity to showcase our overall vehicle design capabilities."

A recent survey of 41 major companies using delivery trucks revealed several improvements they want in future trucks.

Companies want improved safety, a lower cargo floor, greater stability, more-aerodynamic styling, easier maintenance, larger payload and cubic-foot capacity for given GVW, on-line availability of a diesel engine such as Cummins' 4BT, an automatic transmission for that diesel engine and an integrated vehicle from a single source.

Toyota's 21st-century turbine

By John Hartley

HIGASHI FUJI, Japan — After 20 years of work, Toyota Motor Corp. is stepping up development of gas-turbine engines and moving into ceramics.

While Toyota will not discuss the program's budget, company engineers say enough funds are available.

As evidence of its commitment, Toyota showed a sleek coupe called the GTV at the recent Tokyo auto show. Based on the Toyota Soarer, the GTV joins a 150-hp gas turbine to a conventional automatic transmission.

Plans are to market the GTV — but not with a gas-turbine engine. Explains Masumi Iwai, chief project engineer, who worked at Mitsubishi Motors Corp. and Avco-Lycoming on gas turbines before joining Toyota: "The gas turbine is an engine for the next century. We have been working for only 20 years, against 100 years for piston engines." He says his engineers spent very little time on the GTV show car.

Meantime, Toyota is investing a substantial amount of money on gas-turbine research and development. The company is working on three different engines: the 150-hp car unit displayed in the GTV; and 150- and 300-hp versions for buses. The main difference between them is rotor size.

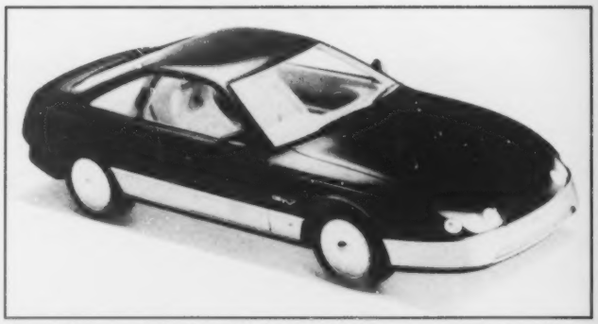
Rotors for the bus engines are larger than those for the car, and their turbine and compressor efficiency is higher. Still, the car gas-turbine is larger than might be expected, completely filling the engine compartment of the GTV.

Toyota is concentrating on two-shaft turbines — a centrifugal compressor first-stage and axial flow-type second-stage. They currently use an all-metal turbine — except for the heat exchanger, which has a Corning ceramic core. Turbine inlet temperature is 1,000 degrees Celsius. The compressor rotates at up to 68,000-rpm, the power turbine at 53,000-rpm. Maximum torque is 245 lbs.-ft.

The engine in the GTV weighs about 440 pounds. The goal is to use a number of ceramic components to boost the turbine inlet temperature to 1,350 degrees, which will improve efficiency dramatically and increase output up to 300-hp, Iwai says.

Toyota has three groups working on ceramic components: Iwai's turbine group, responsible for selecting the components and basic design; plus two materials engineering groups, one at Toyota's central research laboratory and another at the Higashi Fuji laboratory, where the turbine program is being controlled.

Iwai says ceramics will be used first for the primary-stage turbine because the form is easier to make and is not much different from silicon-nitride turbine wheels now produced by Nissan Motor Co. Ltd. for turbochargers in six-cylinder engines.



Toyota plans eventually to market this sleek GTV coupe — without the turbine engine. We'll just have to wait 'til next century for that kind of technology.

Iwai believes the primary-stage turbine can be produced quite readily in ceramics; but the second stage, whose blades extend radially from the hub without the supporting flange of the centrifugal compressor, will be more difficult to make from ceramics.

Looking back two decades, George Huebner, doyen of the automotive gas-turbine world when he ran Chrysler Corp.'s turbine-car project in the 1960s and 1970s, would be unimpressed by Toyota's GTV.

While Toyota claims a top speed of 125-mph for the GTV, it is necessary to wait several seconds before the car gradually creeps forward from standstill. Acceleration is far from brisk, turbine whine is unpleasant and overall performance is poor.

Huebner's Chrysler turbine car was superior to the 1987 Toyota GTV in performance and driveability — at least for now. ■

WORLD NEWS BRIEFS

Ford U.K. facilitizes

Ford of Britain adds a $6-million computerized driveability test-chamber to its research and engineering center in Dunton, England. Incorporating a wind tunnel and rolling-road chassis dynamometer, it permits testing vehicles and components in temperatures from minus-40C to plus-50C. Ford also breaks ground at Dunton for a $15-million electronics technical center with labs for electronic powertrain-control systems, entertainment systems, instrumentation, fuel systems, spark plugs and CAD equipment. It is due for completion by spring 1989.

Renault consolidates

Renault meshes its operations in Spain and Portugal into one unit. Production and marketing activities had operated separately for each market. Under the new structure, factories in Spain and Portugal will run as one production system. The French automaker is market leader in both countries, having about 25-percent of new-car sales in Spain through its Fasa-Renault subsidiary and about one-third of sales in Portugal. Fasa builds nearly every model in Renault's car line, currently at the rate of about 1,500 units daily. About 260 cars and vans a day are built in Portugal.

Nissan works by night

Nissan Motor Manufacturing (United Kingdom) launches a night shift at its assembly plant in Washington, England. The move comes about a year ahead of a schedule set forth in an agreement between the Japanese firm and the British government. Addition of 300 employees to man the shift boosts total employment at the plant to 1,100. The company expects production to total more than 40,000 units in 1988. Plans call for output of 100,000 Bluebird cars a year by 1991.

Panther moves to Harlow

Panther Car Co. Ltd., British sports-car producer, will transfer operations from Surrey, England, to Harlow, Essex, next year. The subsidiary of South Korea's Ssangyong Industrial Group acquires 76,000 square feet of a former printing plant and a four-acre site to produce its new Solo car and current Kallista roadster. Kallista production at Harlow will begin in March; Solo is expected to follow by midsummer. The site could also be used to build the Panther Stampede, a light four-wheel-drive vehicle being developed by Dong-A Motors, a Ssangyong subsidiary.

Saab tunnel has it all

Saab Car Division has completed a new climatic wind tunnel at its technical center in Trollhattan, Sweden. The tunnel has computer-controlled equipment for realistic simulation of sunlight. Temperatures from minus-35C to plus-45C can be simulated, with humidity levels up to 95 percent. A 150-km/h air stream can be generated by the fan. A rolling-road chassis dynamometer allows test cars to be driven at speeds of up to 150 km/h.

Suez channel of credit

Fiat Group signs agreements with two subsidiaries of Suez banking group Locafrance and Sofinco to cover credit sales of Fiat products in France. Agreements call for Sofinco to acquire half the capital of Fiat Credit France, which finances sales of Fiat cars, and gives Fiat Credit France access to Sofinco's financial services sales network. Fiat will also buy 50-percent of Locafrance's Cefimat unit, an industrial financing firm in France.

BMW takes software stake

BMW AG will spend $20 million for 10 percent of Softlab GmbH, Munich-based computer-software producer. The West German firms also sign a five-year $30-million pact under which Softlab will develop software systems for several BMW operations, ranging from factory production to accounting.

Starters and alternators

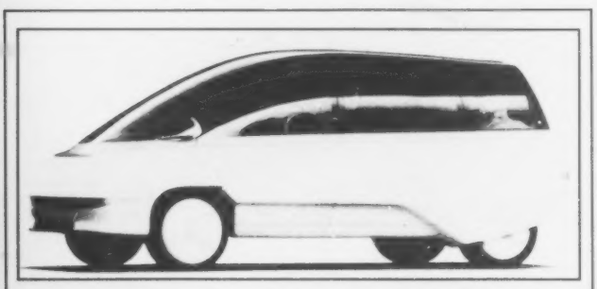
Lucas Industries PLC and Magneti Marelli S.p.A. plan to form a new company in Britain called Magneti Marelli PLC. It will take over assets of the starter and alternator operation of Lucas Electrical Ltd. Lucas will own 30 percent of the company. Magneti Marelli will own 70 percent and assume management responsibility.

Mazda eyes electronics

Mazda Motor Corp. and NEC Corp. form a new company called NALDEC (New Automobile Life Development by Electronics) to develop advanced electronic technology for cars. It will focus first on r&d, but future production is planned. Mazda and NEC each hold a 50-percent equity.

Goodyear talks Turkey

Goodyear Tire & Rubber Co. will spend $31 million to make its subsidiary in Turkey a major export center. Plants in Izmit and Adapazari will be expanded and modernized to meet demand in Europe, the Middle East and local markets. Goodyear will also spend $6 million on its steel-radial tire plant at Salonika, Greece. ■



B.L.T. — hold the mayo

Fuji Heavy Industries Ltd., maker of Subaru automobiles, displayed this commercial vehicle at the recent Tokyo auto show. It's called the B.L.T., which stands for Business Leisure Transport. Subaru describes it as an all-purpose sports, leisure and business van that "represents Subaru's belief that even commercial vehicles should be stylish and streamlined."

Car sales in Canada fall 2% for October; trucks up 24%

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The 1988 model year got off to a slow start for domestic automakers in Canada. October sales of North American-built cars dropped slightly despite the continuation of incentives on 1987 models and heavy promotion for new models.

Canadian dealers delivered 61,164 North American-built cars in October, down 2.69 percent from 62,857 in October 1986. Ford and Chrysler continued to offer a variety of sales incentives in order to clear out 1987 models in dealer inventory.

For the first 10 months of the calendar year, domestic makers sold 583,882 cars, down 9.03 percent from 641,883 in the first 10 months of 1986.

Truck sales in Canada continued to show gains. Canadian dealers sold 36,265 trucks in October, up 24.80 percent from 29,058 in October 1986. Ford set a record for October, and Chrysler posted the highest one-month truck sales in the history of Chrysler Canada.

For the first 10 months of the calendar year, truck sales totaled 332,432, up 10.96 from 299,606 in the first 10 months of 1986.

Chrysler was the only domestic maker to report higher car sales in October than in the year-ago month. The gain resulted from the inclusion of the former American Motors models in its total for October. General Motors, Ford, and Volvo all showed declines, and there was no year-ago comparison for Honda; that company began building cars in its Alliston, Ontario, plant in November 1986.

Chrysler delivered 12,745 North American-built cars in October, up 0.95 percent from 12,625 in October 1986. Chrysler's October car sales included 183 Alliance and GTA models and 44 Eagle cars. AMC sold 514 Alliances and 44 Eagles in October 1986. They are not included in Chrysler's 1986 figures.

CANADA MARKET SHARES October 1987

Cars	
General Motors	54.65%
Ford Motor Co.	21.88%
Chrysler/AMC	20.83%
Honda	2.42%
Volvo	.22%
Trucks	
General Motors	37.60%
Ford Motor Co.	37.72%
Chrysler/Jeep	24.48%

Chrysler did not have any consumer incentive programs in October on Chrysler-Plymouth, Dodge or Jeep-Eagle division products, but it offered cash incentives to dealers.

"The 1988 model year is off to a flying start. The market strength is there," said John B. Damoose, vice president of sales and marketing for Chrysler Canada Ltd.

The Plymouth Reliant was the top-selling Chrysler Motors car in October with 2,296 deliveries.

Ford was the biggest loser in domestic car-sales volume, and a Ford spokesman said the limited availability of 1988 Ford Tempo models in October contributed to the decline. Ford's Kansas City, Mo., and Oakville, Ontario, plants — where Tempo models are built — were down for model changeover during a 10-week period between June and September.

Ford sold 13,382 North American-built cars in October, down 11.74 percent from 15,162 sold in October 1986.

Ford offered $500 cash rebates to buyers of 1987 Escort, Tracer, Taurus and Sable models. A $2,000 rebate was available on 1987 Merkur XR4Ti, which is imported from West Germany. Taurus was Ford's best-selling car in October with 3,129 deliveries.

GM dealers sold 33,423 North American-built cars in October, down 4.17 percent from 34,879 in October 1986.

No buyer incentives were offered in October, however GM began a sales incentive program on Nov. 2 offering buyers a choice of free air conditioning, free automatic transmission or a $500 rebate on several lines.

Models covered by the program are: Chevrolet Cavalier, Corsica, Celebrity, full-size vans, ST pickup and Blazer; Pontiac 6000 and Tempest; Oldsmobile Cutlass Ciera; Buick Century; and GMC ST pickup and Jimmy. The program runs until March 1988.

Pontiac 6000 was the top-selling GM car in October with 3,575 units sold. Chevrolet Celebrity was second with 2,969.

Sales of Canadian-built Volvos declined in October. The Swedish carmaker sold 135 240-series cars last month, down 29.31 percent from 191 240-series models sold in October 1986.

Honda delivered 1,479 Canadian-built cars — all Accord models — in September.

Ford set an October record for truck sales, and Chrysler's sales were the highest of any month in its history.

Chrysler delivered 8,877 North American-built trucks in October, up 91.07 from 4,646 sold in October 1986. Chrysler's October truck sales topped the previous any-month record of 8,773 in June 1987.

TOTAL TRUCK	36,265	29,058	+24.80	320,589	287,445	+11.53

Chrysler's October 1987 truck figure included 6,348 domestic Dodge trucks and 2,529 Jeeps. Chrysler has sold 6,001 Jeeps in the Canadian market since it bought AMC in August.

Ford delivered 13,680 North American-built trucks, up 24.72 percent from 10,969 sold a year ago. Ford's previous October record was set in 1979 when 11,826 North American-built trucks were sold.

The best-selling Ford truck in October was the F-series full-size pickup with 6,785.

GM delivered 13,708 domestic trucks in October, up 1.97 percent from 13,443 sold in October 1986. GM's October truck sales total was the highest for October since 1980 when 13,818 domestic trucks were sold.

The most popular GM truck in October was the Chevrolet C/K pickup with 1,681 units sold during the month. GMC sold 1,534 Sierra pickup trucks, the sister truck to the Chevrolet C/K.

"The truck market is absolutely booming and the real growth has been in the compact end, especially compact vans, compact sport-utility models and compact pickups," said Jerry Kuzemchak, manager of market analysis, GM Canada.

In addition to North American-built cars, GM in October sold 845 Suzuki-built Chevrolet Sprints, 743 Suzuki-built Pontiac Fireflys, 212 Isuzu-built Chevrolet Spectrums, 146 Isuzu-built Pontiac Sunbursts and 17 Isuzu I-Marks.

Ford sold 875 Mercury Tracers, 25 Merkur Scorpios and 59 Merkur XR4Ti models. The Tracer is built in Taiwan; the Scorpio and XR4Ti are built in West Germany.

Chrysler sold 1,270 Mitsubishi cars and 15 Peugeot cars.

Honda sold 5,416 Japanese-built Honda cars in October, down 7.48 percent from 5,854 imported Hondas in October 1986. It also sold 625 imported Acura models in October; they were not imported in 1986.

Volvo sold 281 Swedish-built Volvo cars in October.

In the imported-truck category, GM sold 17 Isuzu Troopers and Chrysler sold 399 Mitsubishi trucks.

INDIANAPOLIS — In a service for dealers launched in October, the Indianapolis Auto Auction takes delivery of new cars and trucks from manufacturers and cleans and preps them for the showroom and lot.

"We process and inventory the vehicles from the time they are delivered by the common carrier," said Gary Pedigo, general manager of the auction house. "As far as I know, we are the first auction in the country to offer this service to dealerships."

Dealers are charged a flat $110 fee for each vehicle delivered to and processed by the auction. The package includes taking delivery of the vehicles; cleaning, rustproofing and undercoating cars; and treating the interior fabrics against stains, according to a local dealer.

Pedigo said the auction has three clients and is marketing the service to others in the Indianapolis area.

He hopes to be processing 8,000 vehicles by the end of next year, and he said there is a potential for 12,000 to 14,000 vehicles annually.

Indianapolis Auto Auction spent $20,000 for three overhead lifts to enable it to do undercoating and for changes to its facilities. Pedigo said other auctions probably can offer the service with less of an investment.

"We had to reroute some heating ducts at our facility, which turned out to be costly," he said.

The auction, located in the heart of the business district, is within a half mile of several dealerships.

"The service is a natural outgrowth of our normal business with dealers," Pedigo said. "We already prep their used cars."

Because many dealerships in the city are cramped for space, the auction also offers each of its clients 100 parking places on its 60-acre site for an unlimited time at no extra cost. The area is fenced and blacktopped.

The auction assumes all responsibility for carrier damage and provides dealers with a daily computer inventory of cars delivered to the auction.

"It tells the dealer how many cars we have handled, so he knows what cars are in and what has been done to them," said Pedigo.

The appearance of the car when it reaches the dealership is the key to the success of the service, according to Pedigo.

"We understand the new-car business and what a car must look like to sell it," he said.

Bob Parson, vice president of Collins Lincoln-Mercury in Indianapolis, was the first dealer to sign up for the service. "For me, it's fantastic," he said. "Ford drops off the cars at the auction, where they are cleaned up before delivery to the dealership."

According to Parson, the service keeps carriers away from the dealership and eliminates the need to hire people to check in cars and prep them.

And he said that having additional space available at the auction to store cars is an important feature of the package.

"When it gets slow in the winter, the inventory climbs and the service business picks up; I can keep up to 100 cars at the auction," he said.

AUCTION DATES

American Motors

Nov. 24 — Statesville Auto Auction, Statesville, N.C.

Nov. 25 — Kansas City Auto Auction, Kansas City, Mo.; Corry Auto Auction, Corry, Pa.; and Columbus Auto Auction, Columbus, Ohio

General Motors

Nov. 24 — Florida Auto Auction of Orlando, Ocoee, Fla.

Nov. 25 — Southern California Auto Auction, Fontana, Calif.

Ford Motor Co.

Nov. 24 — Harrisonburg Auto Auction, Harrisonburg, Va.; South Seattle Auto Auction, Kent, Wash.; and Salt Lake City Auto Auction, Salt Lake City

Auto output stays near 154,000

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production totaled 154,046, slightly above (0.21 percent) the prior week's 153,721 but a bit below (0.39 percent) the year-ago week's 154,654.

The year-ago week's output was affected by a strike at Delco Electronics Corp., Kokomo, Ind., that closed nine General Motors plants.

So far this year, 6,425,405 cars have been assembled, 9.30 percent below the 7,083,991 completed last year at this point.

Automakers split last week's scheduled output as follows: GM, 51.56 percent; Ford Motor Co., 27.30 percent; Chrysler Motors, 12.01 percent; Honda of America Manufacturing Inc., 4.47 percent; New United Motor Manufacturing Inc., 2.27 percent; Volkswagen of America, 1.30 percent; Nissan Motor Manufacturing Co. U.S.A., 0.85 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.24 percent.

Volkswagen announced it will phase out operations at its Westmoreland, Pa., plant at the end of the 1988 model year. About 2,500 workers will lose their jobs.

GM announced it will reduce the line speed by five units per hour at its Corvette plant in Bowling Green, Ky., on Jan. 4. About 225 workers will be affected by the cutback.

GM will extend Christmas vacation for workers at the Fiero plant in Pontiac, Mich., until Jan. 18. When the plant resumes operations, the line speed will be reduced by five units per hour, affecting about 80 workers.

Line speed at GM's Lansing, Mich., plant, which assembles the Oldsmobile Calais and Buick Somerset, will be cut by 12 units per hour beginning Jan. 25. About 850 workers will be laid off.

GM's Leeds, Mo., plant is idle until Nov. 30 for inventory adjustment, affecting 1,300 workers.

The second shift was dropped today at GM's Wentzville, Mo., plant, laying off about 2,700 hourly workers.

Production resumed today at GM's Fiero plant in Pontiac, Mich. The plant was idle for one week to adjust inventory.

Overtime was scheduled Saturday at Ford's Kansas City, Mo., plant.

Daily overtime is slated Monday, Tuesday and Wednesday of this week at all Ford plants except Edison, N.J.

Chrysler scheduled Saturday overtime at its St. Louis (No. 2) plant. The same plant is slated for daily overtime the first three days of this week.

All assembly plants will be closed Thursday and Friday for the Thanksgiving holiday.

Truck output nearly matches 1987 peak

Truckmakers scheduled production of 85,497 units last week, slightly below (0.26 percent) the prior week's 85,722 but 41.24 percent more than the year-ago week's 60,531.

The previous week's output was the highest of any week so far this year.

The year-ago week's production was affected by a strike at a Delco Electronics Corp. plant that closed several General Motors plants.

Year-to-date, 3,454,873 trucks have been assembled, 7.69 percent more than the 3,208,186 completed last year at this point.

Two days' production was lost last week at GM's Pontiac East plant in Pontiac, Mich., because most of the workers took Monday and Tuesday off to go deer hunting.

Overtime was slated last Saturday at GM's Baltimore and Morain, Ohio, plants.

Ford scheduled Saturday overtime at its Wayne, Mich.; Twin Cities, Minn.; and Lorain, Ohio, plants.

All Ford plants are scheduled for daily overtime today, Tuesday and Wednesday.

All truck plants will be closed Thursday and Friday because of the Thanksgiving holiday.

Car output in Canada best in 11 months

Canadian auto production was scheduled at 23,672 units last week, the highest since the 24,896 total for the week ended Dec. 20, 1986.

Last week's estimated output was 3.26 percent more than the prior week's 22,925 but 7.87 percent below the year-ago week's 25,695.

So far this year, 705,565 cars have been built, 25.81 percent below the 951,052 completed last year at this point.

Truck output was targeted at 19,557 last week, 12.87 percent more than the previous week's 17,327 and 40.71 percent more than the year-ago week's 13,899.

Year-to-date, 733,876 units have been assembled, 3.37 percent more than the 709,925 built last year at this time.

Chrysler Motors' Bramalea, Ontario, plant remains idle due to quality problems.

UAW approves Navistar pact

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Workers at Navistar International Corp. last week ratified a three-year pact guaranteeing the jobs of the entire workforce.

The UAW said the Navistar contract was approved by "a clear majority" at eight local unions representing 7,000 active and 10,000 laid-off workers. The new program protects current UAW members at Navistar from layoffs except those caused by sales declines. Workers must be recalled when sales improve. The job-security program is backed by $40 million.

The contract includes a 16-cent wage increase, a 73-cent COLA fold-in, regular COLA payments and improved pensions for current and future retirees.

Mike Neese, president of Local 402 at Navistar's plant in Springfield, Ohio, said his local turned down the contract 2,623 to 1,504.

Neese said he opposed the contract because it does not provide an annual raise and because Navistar workers can continue to transfer into Springfield with full seniority, thus displacing Springfield workers during layoff periods.

GM hikes realty ties to dealers

Per-car rent plans grow in big cities

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors is planning to increase its innovative dealership real estate activity, whereby it charges dealers rent based on how many cars and trucks they sell.

GM wants to keep points open in high-rent locations and to soften the staggering impact of rent on dealership operations in those areas.

Those motives are prompting GM to undertake increasingly complex real estate deals, as it did in the recently completed acquisition of Potamkin Cadillac/Manhattan by the Roger Penske organization.

"It's a rifle shot at a situation where the cost of real estate is overwhelming and we have a chance to help the dealer and ourselves," said John R. Rines, general manager of GM's Motors Holding Division.

He said the current round of complex lease arrangements should not be viewed as subsidies. "We are absorbing costs that a retail dealer can't pay out of his profit margin, because we want to be represented in that area," he said.

Rines said the per-car rent payments are structured to make a dealer's real estate costs "an average rent equivalent," not to give him a competitive advantage.

"We can give a new guy a break," he said.

"We can also incentivize a guy quite well where we want to move a lot of cars," Rines said. "For example, we can make the rent $500 per car for the first 1,000 cars sold.

LANCE GRAVES

AUCTIONS: *They're big, growing business; sales were $20.4 billion in 1986*

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Auto auctions are big business — an estimated $20.4 billion in 1986 — and any of the nation's 10 biggest auction houses last year could have competed in unit volume with the European luxury-car importers.

Combined, the 10 biggest auctions sold roughly 545,000 used cars and trucks last year — more than Cadillac, American Motors-Jeep or any of the new-car importers except Honda, Toyota and Nissan.

The gross sales of the top 10 amounted to $3.4 billion, and they expect this year's sales to surpass that total.

Industry sources pegged overall sales at all auctions at about 4 million vehicles last year, making it a $20.4 billion business. Auctions in 1986 sold between 47 and 52 percent of cars consigned by dealers, industry sources said.

This year is shaping up as another stellar year, with industrywide sales approaching 4.5 million cars and trucks, said officials of the wholesaling giant, Anglo American Auto Auctions.

And sales in 1988 are expected to leapfrog another 500,000 cars and trucks to 5 million, Anglo officials predict.

Bernie Hart executive secretary of the 187-member National Auto Auction Association, said exact sales numbers are difficult to estimate because there is no reporting center for auctions.

But he agreed that car and truck sales will top 4 million units this year.

The average price of used cars and trucks sold at the top 10 auctions last year ranged from a high of $9,160 at the Florida Auto Auction of Orlando to an estimated low of $4,500 at the Auto Dealers Exchange, Indianapolis.

Auctions like Florida Auto Auction of Orlando sell a high volume of newer, low-mileage, fleet and lease cars, which bring high prices and push up their gross dollar sales.

Figures are based on information provided to Automotive News by the auctions or parent companies. Some declined to release volume of cars sold. In those instances, sales volumes were estimated based on gross dollar sales that were provided and the average 1986 auction sale price nationwide of $5,100.

Florida Auto Auction of Orlando, Ocoee, Fla., was the titan of car auctions in 1986, followed by: NADE, Bordentown, N.J.; Clanton's Auto Auction, Darlington, S.C.; California Auto Dealers Exchange, Anaheim, Calif.; Southern California Auto Auction, Fontana, Calif.; Southern Auto Auction, East Windsor, Conn.; Columbus Fair Auto Auction, Columbus, Ohio; Auto Dealers Exchange, Indianapolis; APTCO Auto Auction, Taylor, Mich.; and Dallas Auto Auction, Grand Prairie, Texas.

Stock crash cools maker trade stand

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Big 3 domestic car companies seem to be shying away from tough trade reform legislation in the wake of the stock market collapse last month.

Prior to the 508-point drop in the Dow Jones Industrial Average on Oct. 19, Ford Motor Co. and Chrysler Corp. were especially active in lobbying for trade reforms that would force reductions in the U.S. trade deficit.

General Motors has been far less enthusiastic about trade reform, but had been gradually shifting its position toward greater concern for the nation's trade indebtedness.

Now, spokesmen for Chrysler — pleased with trade changes wrought by the weakening of the dollar — are saying that events seem to have overtaken the trade reform bill.

Ford declined to discuss the trade situation at all last week, while GM is continuing to pursue a moderate course.

All three companies are expressing support for the tentative agreement reached between the White House and Congress to reduce the federal budget deficit. The accord would reduce the nation's debt by $76 billion over two years. Tax hikes called for in the compromise have yet to be spelled out, however, and their potential impact on the auto industry is unknown.

The new quiet tone on trade reform may be partly due to concern over whether the Japanese government will continue voluntary restraints on car shipments.

Secretary of Commerce William Verity called on Japanese officials, asking them to maintain restraints on automobile exports to the United States for another year.

Although the Reagan administration has sought to eliminate the Japanese car quotas for several years, the White House also has been seeking peace with Detroit. Ford and Chrysler have been two of the most vigorous proponents of trade proposals opposed by President Reagan.

The carmakers' current attitudes toward a trade policy also may have been influenced by an announcement from the House Democratic leadership that trade reform will not be completed this year, even though experts place the

'88 SALES: *Ford official sees 10 million; others aren't that optimistic*

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co.'s top economist believes the political deal worked out by the Reagan administration and Congress to trim the federal budget deficit will not hurt U.S. car sales.

The proposed cuts are not enough to slow the economy or auto sales, said Martin Zimmerman, Ford Motor Co. economics director and chief economist.

Zimmerman and Ford still believe that 1988 could be a 10 million car year in the United States.

Others are not so certain; they think car sales could come in as low as 9.0 million.

Domestic car sales may drop 5 percent to 10 percent to a level of 9 million to 9.5 million units — "more likely 9.5 million," said Chrysler Motors Chairman Gerald Greenwald. Chrysler expects truck sales to hold even or decline only slightly in 1988.

The lowest forecast to date may be from Robert I. Reich, president and chief executive officer of Marine Midland Automotive Financial Corp., who forecasts a 9.0 million car year.

But Zimmerman is more upbeat: "I had a fear they would go in and cut the deficit too much.

"Given the decline in the (stock) market and the concern about weakening in the economy and concerns about the loss of confidence by the consumer, I did not think this was the time to totally eliminate the deficit.

"But the $30 billion reduction is OK. It is not going to be too contractionary for the economy," he said.

"There's a certain element of smoke and mirrors in the package because the $30 billion includes some asset sales and one-time gains.

"So you really don't have $30 billion in long-term deficit reduction. What was important was the symbolism of the whole thing," he said.

Zimmerman, who doesn't expect a recession in 1988, believes the U.S. gross national product will grow at about a 2 percent rate next year, although he said Ford is continuing to closely watch developments.

Chrysler Motors expects the domestic industry to finish this calendar year with 10 million car sales and 4.9 million truck sales.

Greenwald described his 1988 sales forecast as "more a guess than a projection," due to economic uncertainty following the stock market's Black Monday. "Overall, 1988 is going to be tough. But based on what I see now, we're still pretty optimistic."

Marine Midland's forecast is the most conservative. Reich said the industry should expect calendar 1988 new-car sales of no more than 9.0 million units.

"You can't look at the next two years through rose-colored glasses," Reich said. "The fat time is over."

Meanwhile, economists at the University of Michigan said a recession is unlikely. But their latest forecast also said that the October stock market crash may have eliminated as much $10 billion in consumer spending from the final three months of 1987.

Staff Reporter Mary Connelly contributed to this report.

Old Glory may wave, but on a small scale, please

LAKELAND, Fla. — "Long may it wave" apparently should be measured in years, not feet.

T. Thomas Chevrolet-BMW violated a city code when a Marine color guard raised a 20- by 38-foot flag on a 100-foot flagpole on Veterans Day.

The code says the height of a flag cannot exceed a quarter of the pole's height. There is also a code limiting poles to a height of 75 feet.

Gene Strickland, Lakeland city manager, said the issue had turned into "a lot of motherhood and apple pie."

Monty Haskins, executive manager of the dealership, said it was a "misunderstanding."

A nearby dealership, Blount Acura, also is violating the code. A public hearing is scheduled for next week, but Strickland said the council is divided. He said a couple members don't care "as long as it's an American flag."

Chrysler adds trucks, will build fewer cars

By Michelle Krebs and Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Chrysler Motors plans to make fewer cars and more trucks in the first quarter of 1988 than in the first quarter of 1987.

Chrysler's total first-quarter vehicle production will be up 8,000 units over the same period this year. Chrysler's truck output is scheduled to increase 14 percent over this year's first quarter while car production is expected to drop 8 percent.

Chrysler plans to build 575,000 cars and trucks in the United States and Canada in the first quarter, compared with 567,236 in this year's first quarter.

Truck output is projected at 275,000 units in the first three months of 1988, vs. 241,034 built in the same period of 1987.

Car output is scheduled at about 300,000 units, compared with 326,202 in this year's first quarter. The reduction will be accomplished by temporarily closing three U.S. plants and one Canadian plant and trimming line rates at some plants.

To keep production in line with softening sales in some lines, Chrysler Motors Chairman Gerald Greenwald said the company will temporarily close the following plants on Jan. 4: Jefferson Avenue, Detroit, for one week, affecting 3,300 workers; Pillette Road, Windsor, Ontario, for one week, affecting 1,800 employees; Newark, Del., for two weeks, idling 1,800 workers; and St. Louis (No. 1) for three weeks, idling 3,300 workers.

Greenwald also announced production adjustments at three other plants for indefinite periods. On Jan. 11, the Jefferson Avenue plant will reduce its daily output by 20 percent, idling 600 workers. On Jan. 18, daily output at Newark will be cut by 50 percent, affecting approximately 1,700 workers. On Jan. 25, a 19 percent decrease in the daily production will take effect at the St. Louis (No. 1) plant, affecting about 600 employees.

Chrysler plans to increase production rates at three other plants. Greenwald said that on Jan. 4, daily output at the St. Louis (No. 2) plant will jump 15 percent. Also effective Jan. 4, daily output at the Brampton, Ontario, facility will be increased by 15 percent. Chrysler will add a second shift to its Belvidere, Ill., plant on Jan. 11, adding about 1,300 workers.

Also in January, Chrysler plans to increase production at its Toledo Jeep plant by 12 percent.

Meanwhile, General Motors has reduced its projections for U.S. car production for this quarter and the first quarter of 1988 to reflect its recent scheduling adjustments at eight assembly plants.

Present plans call for GM to to build 849,649 cars in the fourth quarter. That is 35,457 fewer than GM previously planned to build (Automotive News Nov. 9). It represents a 15 percent decrease from the 976,803 cars GM built in the fourth quarter of 1986.

GM plans to build 858,385 cars next quarter, which is a 29,825-unit reduction from its previous schedule (Automotive News Nov. 23). GM expects to build 16 percent fewer cars in the first quarter of 1988 than the 1,024,666 cars it built in this year's first quarter.

GM's revised figures bring the Big 3's estimated U.S. car production in the fourth quarter to 1,609,273, down 7 percent from the 1,724,654 cars they built in the fourth quarter of 1986.

In the first three months of next year, the Big 3 now plan to build 1,600,750 cars, down 15 percent from the 1,874,510 they built in this year's first quarter.

GM's revised figures reflect the previously announced scheduling adjustments at eight of its assembly plants. The adjustments will be achieved through reductions in line speeds, extensions of Christmas vacations and temporary as well as permanent closings.

Plants in Pontiac, Mich., and Detroit will close permanently by year-end. The Framingham, Mass., plant closed for an indefinite period beginning this week (Nov. 30).

Christmas vacation will be extended at three plants with two — the Fiero plant in Pontiac, Mich., and a plant in Lansing, Mich. — returning from the extended leave with a reduced line rate. The line rate at the Corvette plant in Bowling Green, Ky., also will be reduced.

Chrysler's fourth quarter production schedule for U.S. car output remains unchanged. Chrysler plans to build 287,000 cars in the fourth quarter, down 8 percent from the 310,715 built in the year-ago quarter.

Ford has not changed its fourth-quarter production schedule of 472,624 cars, which is 8 percent higher than last year's 437,136.

However, Ford is expected to revise upward its present schedule for first-quarter production. At present, Ford plans to build 448,000 cars in the 1988 first quarter, but at least 30,000 units are likely to be added to that schedule. Ford produced 534,209 cars in this year's first quarter.

Mid-November car sales pick up steam

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Mid-November sales of U.S.-built cars could not match last year's Nov. 11-20 period, but deliveries were higher and cars were selling at a stronger daily rate than in the first 10 days of November this year.

Toyota reported a sales gain for the 10-day period, and Chrysler Division cars improved their performance from a year ago by 35.76 percent.

Sales for the 10-day period totaled 172,552, a drop of 12.03 percent from 196,159 for the equivalent period last year. The daily selling rate was 19,172 compared with 21,795 a year ago. Both periods had nine selling days.

Domestic-car sales rose by 33,633 units from the first 10 days of November. The mid-November daily selling rate was 10.41 percent stronger than the early-November rate of 17,364.86.

In mid-November this year, the Big 3 U.S. automakers reported sales downturns of 1.61 percent to 17.98 percent from the 1986 period. Ford Motor Co.'s sales slipped 889 units or 1.61 percent to 54,442 units.

Chrysler's 10-day sales dropped 7.69 percent, although sales of Chrysler-badged cars totaled 8,197 compared with 6,038 for the equivalent period last year. Introduction of the New Yorker and New Yorker Landau helped. Sales of the LeBaron convertible also improved.

General Motors sold 80,628 cars, off 17.98 percent from the comparable period a year ago.

Toyota reported a 98.03 percent increase in deliveries of U.S.-built cars. Nissan delivered 47.54 percent fewer cars than it did last year, and Volkswagen sales dropped 29.25 percent.

Honda's sales declined 22.18 percent for the period. Mazda sold 163 U.S.-built cars produced at the Flat Rock, Mich. plant.

September RV shipments up 11%

Van converters praise Ford for consignment-pool support

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Wholesale RV shipments continued their late-season surge in September.

RV manufacturers shipped 33,400 units in September, up 11.3 percent over the year-ago month, according to the Recreation Vehicle Industry Association.

All major segments of the industry were up, with van conversions, the largest segment, showing a 3.4 percent increase on shipments of 15,300 units.

For nine months of calendar 1987, industry shipments of 313,500 were up 4.9 percent.

Van conversion shipments totaled 142,400 and were off 2.5 percent for nine months.

Detroit manufacturers shipped 26,700 vans with the seat-delete option to converters in September, up 115.3 percent from like 1986, portending a big future increase in shipments from converters to dealers.

Of those September shipments, full-sized vans accounted for 21,100 units, up 111.0 percent from a year earlier. Compact vans accounted for 5,600 shipments, up 133.3 percent from last year.

For nine months of this year, Detroit shipped 164,100 vans with the seat-delete option to converters, 33.5 percent more than in the comparable year-ago period.

Of the nine-month total, 133,400 were full-sized units, up 34.5 percent from a year ago. Compact vans accounted for 30,700 units, up 29.5 percent from last year.

Elkhart, Ind., converters cited the encouragement Ford has given its dealers to work with its consignment pool accounts, rather than with outside converters.

They feel that if their industry is to survive — staving off potentially disastrous lawsuits involving products not built to Detroit or RVIA standards by non-pool companies — original-equipment manufacturers will have to provide more encouragement to dealers.

Converters point out that channeling products through pools allows manufacturers and dealers to retain control of the quality and distribution of their products from production right through to their ultimate sale to retail customers.

Dealers, too, retain all the normal benefits of dealing with the factory. They still get their sales cards, holdback and any privileges on incentive programs.

If the product is distributed through any other channel, Detroit manufacturers lose control over the quality of the work that goes into it and over its distribution through wholesale and retail channels.

Also, because of the large number of units ordered by dealers and sold to non-pool accounts, manufacturers really don't know how big the total field inventory of converted vans is, even though they sometimes think they do, converters point out.

Often, non-pool units end up on non-franchised-dealer or used-car lots with factories losing total control over them.

Converters singled out Ford's efforts because its success in encouraging its dealers to work more with consignment pool companies has generated a record volume of business for them, for Ford and for its dealers this year.

Ford has run a record number of units through its consignment pool system, converters say.

Its retail sales of consignment pool vehicles were up by 1,000 units at the end of September, and its dealer inventories of consignment pool vehicles were also at a record level, according to industry sources.

Converter group has program for warranty work

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The National Van Conversion Association, Greenfield, Ind., has had its ups and downs, but it feels its latest comeback may be permanent.

Twenty-three companies are enrolled in the association's certification program. Officials say another 50 or so are in various stages of being certified.

The association seems to be concentrating a lot of its recruiting efforts in new conversion locales like Georgia.

Fourteen of the 23 companies enrolled in its program are from that state, including Zimmer Motor Homes, Cordele; Quail Creek Custom Vans, Lavonia; and Executive Traveler, Athens.

The association claims membership of about 200 companies at present, including a number of suppliers.

One of its more interesting new projects is a warranty program that would allow converters to service each others' vehicles.

Converters are frequently better equipped than dealerships to repair the upfitted portion of a van, since they are more familiar with how the vehicle was put together, said Doug Cole, an association official.

A national program allowing different converters to work on each others' vehicles also would help counteract lemon laws, which specify that, after three attempts at repairing a vehicle, a dealer or manufacturer has to buy it back.

Such a program, as envisioned by the association, would attempt to standardize flat rates for different kinds of conversion repairs. Currently, there are no such rates in the industry.

Under the association's program, dealers would have the option of using a converter in their area to repair a van, becoming middlemen between the converter who built the vehicle and the one repairing the unit.

The association also is trying to help coordinate various regional shows, like the recent Georgia show.

OPPORTUNITY

Ford doesn't plan to build a Suburban so market is wide open for converters

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. sources indicate the company has no plans to build a vehicle like General Motors' Suburban — leaving that market niche wide open for converters.

Jerome Mittman, Ford RV and special vehicle sales manager, pointed out that the full-sized Bronco is still doing well with 49,000 sales in the 1987 model year.

He said he felt the limited sales potential of the Suburban market, worth about 73,700 sales to GM last year, didn't justify the cost of an all-new entry from Ford.

That is good news for Magnum Motor Coach, Sturgis, Mich., and Centurion Vehicles, White Pigeon, Mich. (Automotive News Oct. 9). They are among the few doing such conversions.

Magnum entered the market earlier this year, with a Metropolitan model. It offers a four-door Suburban-style luxury vehicle in half-ton, three-quarter-ton and one-ton configurations on Ford F-150, F-250 and F-350 chassis and a four-door Bronco on Ford's U-150 chassis.

The luxury interiors are designed to provide seating for five to eight passengers. The vehicle is made up of all Ford parts.

The Metropolitan package includes such standards as high-back captain's chairs, floor console between the driver and passenger seats, overhead console with indirect lighting, "Bronco" style rear tailgate with power window and rear removable fiberglass top.

In 1986, Magnum converted about 180 vehicles of all types, according to T.W. Holt, vice president of marketing.

Magnum and Centurion market units exclusively through Ford dealers. Their biggest concern is having prices close enough to the Chevy Suburban to keep them competitive.

As Robert Froschauer, president of Centurion, pointed out, "We can't afford to be much more than $1,000 to $1,500 over Suburban. After that, brand loyalty goes out the window" and a customer becomes more inclined to buy the GM product.

Depending on whether the vehicles have two-wheel drive or four-wheel drive, prices for its F-350 crew-cab-based model are expected to be about $22,000 to $23,000 wholesale.

Holt said his company's products should be compared to a customized, rather than a factory, Suburban ur.

Magnum's wholesale prices range from $17,700 for a stripped version of the F-150-based Metropolitan to $23,000 for a loaded version. Other prices range from $18,000 to $25,000 for the F-250-based vehicle to $20,000 to $25,000 for the F-350 and $21,000 to $25,000 for the four-door Bronco.

Holt said that customized Suburbans typically wholesale for about $22,500 to $26,000.

Magnum's biggest market, as might be expected, is in Texas and the Southwest. It has delivered about 35 Metropolitans so far this year and expects to ship about 350 next year.

Denver Ford deal taps van-conversion field

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Competition in the van conversion business comes in many shapes and sizes — sometimes, even from customers.

Freedom Wheels, Northglenn, Colo., is a van customizing firm founded by Ford dealer Brian O'Meara in 1972. It now distributes its vans through 30 other dealerships as well as its own O'Meara Ford Center in Denver.

O'Meara's van conversion business increased about 20 percent last year as a result of getting a Dodge pool account, solidifying its dealer network and increasing its sales of vans for the handicapped.

Freedom Wheels is producing about 600 van conversions a year. It also does quite a number of pickups which, O'Meara said, are almost as popular as the vans in the West. And it is one of those rare auto dealerships that sells and services regular RVs, like Class A and C motor homes, as well.

RV servicing is handled by the van conversion company in a separate facility.

O'Meara said he got into producing vans for handicapped individuals quite by accident. He hired a handicapped Vietnam veteran who suggested it as "a tremendous market no one was catering to."

The veteran subsequently helped develop the business through contacts he had established while working for a newspaper for the handicapped.

Based on surveys by the National Center for Health Statistics, there are 450,000 to 500,000 people confined to wheelchairs, O'Meara said.

The annual replacement market on wheelchair van conversions is over 70,000 units. Each year, 8,000 new people enter this rapidly growing market.

Along with the permanently impaired, there is an even greater number of people temporarily confined to wheelchairs. At any one time, that segment may amount to 12 percent to 13 percent of the population, O'Meara said.

It is estimated that the number of wheelchair users will increase as the average age of the population increases.

Using standard-size and mini Ford and Dodge chassis, Freedom Wheels installs a complete range of fully automatic and semi-automatic wheelchair lifts.

Other applications for the handicapped include dropped floors, raised roofs and doorways, power door openers and wheelchair restraint systems.

The company is approved by the Recreation Vehicle Industry Association, the Veterans Administration and several regional rehabilitation centers.

O'Meara noted, though, that the company's primary business is still regular conversions. Freedom Wheels offers a full line of van conversion packages, starting at $3,495, to dealers nationally.

Pickup isn't pretty, but it's a winner

ANADARKO, Okla. — Donna Settle's beat-up Chevrolet pickup truck was judged the ugliest by a panel of judges who picked the worst-looking vehicle during festivities in southwest Oklahoma.

Settle and her son, Jimmy, won a set of four new tires for bringing their rusty, dented machine to the contest. The only condition in the contest was that the pickup had to be drivable to participate in the Veterans' Day Parade.

Runnersup won truck boxes, sets of tools and seat covers.

"In France, they're proud of their old wine. Here, we're proud of our old pickups," said Devery Youngblood, project manager for Main Street Anadarko, part of a downtown redevelopment project.

"We've actually had arguments break out in businesses as to which one had the ugliest pickup. It's really a source of pride."

— The Associated Press

COVER STORY

Continued from cover page

DeWolfe's numbers include wholesale shipments of 210,000 RVs and 198,000 van conversions in calendar year 1987, and 214,000 and 180,000 of each, respectively, in 1988.

"My feeling is the stock market crash will not really affect the numbers very much. It may downgrade the sizes of units; there are likely to be more smaller-size motor homes sold, with fewer extras. But the numbers won't change appreciably," DeWolfe said.

Based on RVIA data, the analyst believes van-conversion growth has leveled off, but he cautions that this may be a reflection of incomplete sales reporting.

"It may be that van conversions aren't slowing down, but that RVIA is not getting all the figures. There may be an expansion in the number of people making van conversions, so that customers have other places to buy them *(besides RVIA member companies)*," DeWolfe said.

Incomplete reports or not, Detroit manufacturers also foresee 1988 as pretty much a repeat of this year's RV market.

Said Jerome J. Mittman, Ford RV and special-vehicle sales manager: "The van conversion market is softening a little right now, but it's no major concern. I suspect our shipments will be about the same as they've been."

Ford shipped 60,000 Econolines, with factory prep or seat-delete packages in the 1987 model year, plus some 5,000 Aerostars.

The company also shipped about 20,000 Class A and C chassis to motor-home manufacturers, according to industry estimates.

Ford hopes to add another 15,000 to 20,000 chassis shipments when it unveils a new Class A unit next fall.

Aerostar conversions may increase a little in 1988, Mittman said, but he doesn't foresee any dramatic increases, at least until Ford comes out with an extended-length Aerostar.

For the time being, the company is quite content to produce 90 percent of its Aerostars as passenger vans, from which it makes the most profit, leaving just 10 percent for the commercial cargo and conversion market.

James E. Greene, assistant manager of Chevrolet's special vehicles department, said Chevrolet's full-size van-conversion business in 1987 increased 25 percent, while Astro volume remained about the same. But Astro is a comer in the market.

Astro accounted for 35 percent of Chevrolet's van conversions in the 1987 model year and is expected to account for about 40 percent in 1988, according to Greene.

"The demand is certainly there," he said. "We just wish we had the capacity to build more Astros."

If Astro conversion demand continues at this pace, Chevrolet will lose some full-sized van conversions to Astro, Greene said. But he noted that the conversion market is seasonal and capable of abrupt swings.

Astro's conversion popularity is even more impressive when sales incentives are considered. General Motors is offering free air-conditioning on its full-sized vans. Worth more than $700, an A/C unit is given to van converters who order a group of the most generally popular options on the vehicles.

In contrast, there is no similar spiff on the Astro.

"If you put a pencil to it, the G van with free air is almost the same price *(wholesale)* as the Astro. So, it's strictly a consumer market-driven situation, and not price-driven," said Greene, who believes female customers are a major factor in Astro's rising popularity.

Chevrolet shipped about 50,000 to 60,000 G vans to converters in 1987, and expects to repeat that in 1988. Astro shipments pegged at 18,000 to 22,000 this year, are expected to increase to 22,000 to 25,000 in 1988.

GM shipments of Class A motor-home chassis totaled about 30,000 last year. John Deere, with its new Class A chassis and aggressive pricing, carved about 6,000 sales out of this market. Ford managed about 2,000 sales with its limited-production small Class A.

Although Ford supplies Deere with its engine and powertrain, it is the carbureted version of the Ford 7.5-liter V-8, and not the new fuel-injected unit, which would boost Deere's competitiveness in the motor-home chassis segment.

Pleased with the sales performance of their Class A chassis and other product and marketing moves they are undertaking *(see related story on page E8)*, GM officials figure they can fend off their Class A competitors in the 1988 model year.

GM shipped about 6,000 cutaway chassis to the Class C market in 1987, and anticipates it might do about the same or slightly better in 1988.

Chrysler shipped about 27,000 to 28,000 full-sized vans to converters through its dealers and consignment pools last year, according to James Lynch, manager of special vehicles.

Lynch thinks there may be a slight decline in 1988 based on the current economic climate, but he looks for a generally strong market.

Said the Chrysler official: "Right now the outlook is somewhat cloudy. With current economic trends and the stock market we're experiencing, there may be some slowdown in car and truck sales. Truck sales are still pretty strong, though. I think we can work our way through the next six months and still have pretty sizable industry sales and see a nice upturn next spring.

"The only thing that might affect that, of course, would be higher oil prices or shortages, or interest rates."

Lynch said the van-conversion market remains very strong.

Chrysler shipped about 3,000 minivans to converters last year. Lynch said the exact number is difficult to pin down because so many dealers order minivans with seats, in order to retain the flexibility of selling them to an RV company or a commercial account.

Chrysler's conversion-pool accounts also order a certain number of minivans with seats.

Lynch said Chrysler has been getting "a great deal of interest" from dealers and converters for the extended minivan which provides extra room behind the rear seat for luggage and good performance with its new V-6 engine.

In January, Chrysler plans to increase production of minivans, shifting more of its mix toward extended-length models and increasing both dealer and conversion-company allocations.

"We feel there's definitely a commercial and van conversion market out there in which we can increase sales by changing the mix; but we're going to go very cautiously until we see exactly what the market can absorb," Lynch said.

Chrysler has been putting scheduling preferences on Caravan/Voyager wagons. But with its St. Louis plant up and running, there will be extra capacity to go after other markets.

Chrysler has found that many of the conversion companies, through sophisticated purchasing capabilities and design concepts, have been able to create some "very, very competitive" factory-competitive packages for its minivans, Lynch said.

Like its competitors, Chrysler has a specially discounted package on full-sized vans. Called the Prospector, it provides a Dodge dealer with a favorable discount on optional equipment purchased for van-conversion applications.

Pool companies order 85 percent of their vans with the package, according to Lynch. Chrysler consigns the vehicles to them, and they in turn wholesale them to dealers.

The new Prospector IV package, offering about a $500 retail-level discount, has a content very similar to last year's.

Although Chrysler undoubtedly will do more conversion business because of its increased minivan production capacity, the company has no plans to expand its pool accounts.

"We've aligned ourselves with 50 of the most prominent accounts in the country," Lynch said. "The only time we make a change is if a company doesn't make proper use of its consignment inventories" — meaning it doesn't turn over sales within a reasonable time period.

Lynch said that having more pool accounts would not necessarily generate more sales, but would simply result in the Dodge pool organization "storing more vehicles and tying up more cash." ■

RVIA: voice of the RV industry

The Recreation Vehicle Industry Association (RVIA), based in Reston, Va., is the national association of RV manufacturers and component parts suppliers that together produce 95 percent of all recreation vehicles in the United States.

RVIA defines a "recreation vehicle" as a vehicle designed as temporary living quarters for recreational, camping, travel or seasonal use. RVs may have their own motor power (as with motor homes); may be mounted (as are truck campers); or towed by another vehicle (travel trailers). Off-road vehicles are not included in the definition.

RVIA has 641 members, including: 278 manufacturers; 284 suppliers; 7 manufacturer's representatives; and 72 affiliates and associates.

The basic purpose of RVIA is to serve as an industry voice with the government and general public, and as chief source for shipment statistics, market research, technical data, consumer and media information.

In addition to sponsoring two annual RV shows, RVIA maintains an inspection program to monitor compliance of the plumbing, heating, electrical, and fire and life safety systems of vehicles made by its members in conformance to American National Standards Institute standards for motor homes, travel trailers, park trailers, truck campers and folding camping trailers, and alerts consumers to look for the oval-shaped RVIA seal.

The black and silver shield displayed on the exterior of van conversions means the converter self-certifies compliance with Federal Motor Vehicle Safety Standards (FMVSS) and certain National Electrical Code (NEC) requirements.

For RVIA members that produce van conversions with at least one plumbing, heating or 120-volt electrical system, displaying the oval seal is mandatory, while displaying the van shield becomes optional.

RVIA also provides an ongoing Federal Motor Vehicle Safety Standards (FMVSS) educational program for its members, and an RVIA seal affixed to members' units signifies their participation in the program.

RVIA monitors state and national legislation that could have a positive or negative effect on the RV industry. Current issues under scrutiny include: energy; franchising; warranties; financial or credit restraints; equipment requirements; product liability; licensing; bonding; titling and registration procedures; rules regarding use and highway movement.

A study by the University of Michigan shows there are approximately 7 to 8 million RVs in the United States and that there are about 25 million RV enthusiasts. In addition, rentals of RVs are booming. ■

Volvo shopping in big-truck field

Gyllenhammar hints at expansion in U.S. and worldwide

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STOCKHOLM, Sweden — AB Volvo, which has taken over General Motors' heavy-duty truck operations in the United States, will consider new acquisitions for its worldwide truck business, including further expansion in the United States.

In an interview, Volvo Chairman Pehr Gyllenhammar said his company's high level of cash liquidity in the current stock market climate could present acquisition opportunities. He said the Volvo group is particularly interested in building up its truck and food sectors.

In the United States, Renault's Mack Truck unit is seen as a possible target, though Gyllenhammar said, "I don't know if it is for sale."

Volvo has outlined an aggressive growth strategy for its U.S. truck business. It has 76 percent interest in the newly formed Volvo-GM Heavy Truck Corp. and has announced a $100 million investment program to expand and upgrade U.S. production facilities.

Analyst John Lawson of Nomura Research Institute, London, has said that Volvo is pursuing "the clearest and boldest strategy of any truck manufacturer worldwide."

"The accelerated commitment to the U.S. market raises the stakes for Volvo's competitors who have yet to declare a strategy for globalization," Lawson said.

Volvo's better-than-expected third-quarter results put the corporation in a good position for major new purchases, according to Gyllenhammar. The group's pretax profits increased 21.5 percent in the quarter to 2.28 billion Swedish kronas ($380 million).

In his official statement, the chairman said Volvo's financial position "is especially strong in a weak stock market," adding that "with no net liability and strong net financial income, we can handle setbacks. Our high liquidity also enables us to take advantage of opportunities that may arise."

Through the third quarter, the group's liquid funds amounted to 21.3 billion kronas ($3.55 billion) compared with 17.7 billion kronas on Dec. 31, 1986.

While Volvo remains interested in truck industry acquisitions, Gyllenhammar said tough competition in Europe may have dulled the ambitions of some other truckmakers.

"I think there is more and more interest in the U.S. market, also from Europeans," he said. "On the other hand, there has almost been a price war going on in Europe for years now, and there are many manufacturers who haven't made money and that does not create a new appetite for acquisitions or expansion."

Mack frequently has been mentioned as a possible target of Sweden's Scania or Daf Trucks of the Netherlands. Both companies have U.S. ambitions, but Scania has only a small dealer network in the Northeast and some Midwest states, while Daf currently has no presence in the United States.

"I think there has been an interest from many in Mack," said Gyllenhammar. "It's a very good name and has always been a good company. But it depends very much on the plans of Renault."

Gyllenhammar said Volvo "has not declared an interest in Mack specifically."

"But I would say that we are interested enough in the U.S. market so that any movement that affects the whole market we would like to know about and perhaps participate in the discussion," he added.

Enasa, the Spanish government-owned maker of Pegaso trucks and buses, may enter the U.S. market late next year and is talking with manufacturers who have distribution networks. However, Gyllenhammar said Volvo is not interested in a link-up with Enasa.

"We think that product is very important, and I have a feeling that the Spanish manufacturer has been looking to other partners to support its product development," he said. "So to help someone else into the United States is not really our primary objective."

Enasa recently introduced a new heavy-truck range in Europe featuring a cab developed in a joint venture with Daf.

Noting that heavy-truck sales in the United States grew 18 percent during the first nine months of 1987, Gyllenhammar said he is bullish about that market.

"We've seen a very sound truck market, at least in the areas in which we operate, primarily North America and Western Europe," he said. "The truck market does not normally decline dramatically unless the whole world economy gets a big shock. I would suppose that we would still have a fairly good truck market in 1988."

Volvo-GM Heavy Truck is expected to sell some 20,000 units in the United States in 1988 including about 8,000 GMC units. In the long term, capacity at Volvo-GM's New River Valley plant in Virginia and at its Utah facilities is expected to be doubled to about 24,000 units.

Topaz will be introduced on Mexican market in February

Mercury Topaz production begins at Ford of Mexico

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — The Mercury Topaz, available since 1983 in the United States, now is being produced at Ford Motor Co.'s Cuautitlan plant near Mexico City. It will be introduced on the Mexican market in February, a Ford spokesman said.

In Mexico, the car is known as the Ford Topaz. It will replace the older Topaz, which was Mexico's first aerodynamic car when it was introduced several years ago.

The Topaz and the Taurus will lead Ford's lineup for the 1988 model year, following the 100-day labor dispute in Cuautitlan that wrecked Ford's production plans for 1987.

"In volume terms, we lost about 10,000 units, including cars and trucks," the spokesman said.

The Cuautitlan plant, whose production is exclusively for the Mexican market, reopened Nov. 5 with a scaled-down workforce.

The spokesman said, "We have re-employed 70 percent of the workforce that we had before the dispute started (3,200 blue collar workers). As soon as production accelerates, we will take on more."

He added, "With the new contract, Ford is in a much more competitive position in Mexico."

Other Ford cars being made at the Cuautitlan plant for the 1988 model year are the Cougar and Thunderbird. The plant produced 1,900 Thunderbirds, 3,600 Cougars and 10,100 Topazes in the 1987 model year, as well as pickup trucks, according to Ford statistics.

Mazda and NEC team up in Japan to develop auto electronics

HIROSHIMA, Japan — Mazda Motor Corp. and NEC Corp. have formed a new company in Japan to develop advanced automobile electronic technology.

Called NALDEC, an acronym for New Automobile Life Development by Electronics, the new company will be located in Hiroshima. Sachio Hata, currently general manager of corporate projects for Mazda, has been named president.

Mazda and NEC, one of Japan's leading electronics and communications equipment manufacturers, said they decided to form the new company "because of the growing application of advanced electronic technology in automobiles."

Initially, the company will focus on electronic-technology development for automotive use, although production is planned in the future, Hata said.

Mazda and NEC each will hold 50 percent equity in the firm, which will be capitalized at $1.8 million. Annual sales for the company, which will have 50 employees, are targeted at $7.1 million.

'Lost' cars hurt Chrysler

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors attributes a 22 percent drop in its 1987 domestic-car sales to the 237,983 units of production it lost in high-volume car lines.

Chrysler Motors Chairman Gerald Greenwald said last week that the company also has been affected by the 10-percent decline in the U.S. domestic-car market.

However, Chrysler's drop of 1.6 percentage points in domestic-car share this year resulted in part from the temporary production halt of the high-volume Plymouth Horizon America, Dodge Omni America, Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury, he said.

Those subcompacts and full-sized sedans accounted for 2.2 percentage points of market share in 1986, Greenwald said.

Greenwald: "Chrysler was essentially out of the small-car and large-car business this past year."

The America subcompacts were out of production for six months with a loss of 162,000 units in 1987, Greenwald said. The company lost production of 76,000 of its large, rear-wheel-drive sedans during a three-month production halt.

Greenwald said Chrysler expects to increase its market share 1.0 to 1.5 percentage points in 1988, capturing 15 percent of the North American vehicle market.

Chrysler has resumed production of the America subcompacts and the rwd sedans at its Kenosha, Wis., assembly plant. It also resumed production of the Eagle Premier in Bramalea, Ontario, Nov. 23.

Chrysler also has recently entered the luxury market with the Dodge Dynasty, Chrysler New Yorker and New Yorker Landau front-wheel-drive sedans.

"Chrysler was essentially out of the small-car and large-car business this past year while we basically held our own in the middle and our truck sales soared," Greenwald said.

Now, he said, Chrysler is competing in all segments.

Greenwald said sales in the fourth quarter of 1987 are expected to be down from last year's levels because in 1986 a strong surge in year-end sales resulted from federal tax reform.

However, he described fleet business as "booming." Chrysler's fleet orders for cars are up 17 percent in the calendar year and truck orders are up 24 percent, he said.

TRANSPLANTS

FROM PAGE 2

ure includes labor, parts and services, such as utilities, the Cami spokesman said.

No final determination has been made on the percentage of Cami production to be exported to the United States, the spokesman said.

"A lot will depend on market strength," he said, noting that GM sells a higher percentage of small cars in Canada than in the United States.

The spokesman said that Suzuki negotiated a letter of understanding with the Canadian Auto Workers.

The letter outlines a flexible work agreement that reduces the number of job classifications but retains traditional union procedures. It has to be ratified by Cami workers.

Cami is the only Asian-affiliated company in Canada that has indicated a willingness to be unionized, a Canadian Auto Workers spokeswoman said.

Honda of Canada Manufacturing, of Alliston, Ontario, the only Asian transplant company now assembling cars in Canada, is not unionized.

The Alliston plant, which will employ 650 workers when full capacity is reached in 1989, began production last year.

Volvo's Canadian workforce is unionized. The new $15 million (Canadian) plant will assemble the 740-series sedans and wagons and, like the old plant, will employ about 180 production workers.

Construction of Hyundai's one-million-square-foot plant in Quebec should be complete and weather tight at the end of this year, a Hyundai Auto Canada spokesman said. The $325 million (Canadian) project is "on schedule and on budget," he said.

Equipment is now being installed in the paint shop.

"By this time next year, the plant should be gearing up for some trial production. We plan to go into mass production at the beginning of January 1989," the spokesman said.

Full capacity of 100,000 units of a new model will be attained by 1991, he said. It is to be a mid-sized model.

"This is a model that isn't even in production in Korea yet. We plan to unveil the car publicly in 1988," he said.

The spokesman said that information about the new model that "was given out a year ago is not accurate any longer. The car was in the design stage then."

First reports were that the Bromont plant would build a car in the Stellar category. Later, it was reported the new Hyundai model would be styled by Giorgio Giugiaro, have a new V-6 engine and be more luxurious and advanced than anything Hyundai has built to date.

Unlike the other transplant operations under construction in Canada, the Hyundai plant is strictly an assembly facility, like Honda's and Volvo's.

There are no stamping or plastic facilities at Hyundai, and there is no talk now of producing components such as engines.

About 130 components will be sourced locally the first year, he said, and the rest will come from Korea. "We do intend to increase (local sourcing) year by year," he said.

The Hyundai plant, on 420 acres, will employ 1,200 workers when a second shift is added in the spring of 1990, he said.

The first technical and supervisory employees have been hired and were sent to Korea to be trained on a production line.

The Hyundai spokesman said that though most auto plants and suppliers in Canada are in Ontario, the transportation and utility access are good at Bromont, the plant is on a rail line, and it is close to the port of Montreal.

He gave Hyundai's position on the Canadian Auto Workers union: "Our first endeavor is to create a harmonious and cooperative working environment. If and when the CAW wants to unionize, that will be left up to the workers."

TRADE

FROM PAGE 1

estimated U.S. trade deficit for 1987 at $170 billion — about $10 billion higher than last year's $160 billion trade gap.

House Speaker Jim Wright, D-Texas, said that a conference committee charged with resolving differences between House and Senate trade bills will not complete their work until late February 1988. Floor action is not expected until mid-March.

The UAW claims Wall Street wants a trade bill that will check the negative balance of trade in the United States.

Steve Beckman, UAW economist, said, "It is extremely regrettable that Congress has not yet acted on trade legislation in the face of the stock market decline and the other serious economic challenges confronting the United States.

"The stock market was responding to fears that the trade problem is not going to be remedied and that the U.S. is going to continue to be at the mercy of foreigners financing the U.S. deficits," he said.

Beckman described the compromise to reduce the federal budget deficit as "progress." He added that the deal "is within the range of expectations of foreign governments and the financial markets."

Import-car dealers hold an opposite view on the trade issue. Robert McElwaine, president of the American International Automobile Dealers Association, said, "Black Monday was directly linked to fears that were tied to trade legislation.

"The economic changes that have taken place in the last month have altered people's thinking on trade, and no one in Congress wants to be remembered the way Mr. Smoot and Mr. Hawley are."

McElwaine was referring to the 1920s Smoot-Hawley tariffs that are widely cited as one of the causes of the Great Depression.

"A substantial group in the Senate wants to do a basic bill that includes trade negotiating authority for the president, a new harmonized system of tariff classification and some agricultural items in the existing trade bill," McElwaine said.

According to White House reports, Reagan has sufficient support in the Senate to uphold a presidential veto if the bill is too protectionist.

McElwaine said a trade bill of this kind "could be done in a couple of days and would face no real resistance if we could get a couple of people on board." He specifically mentioned Senate Finance Committee Chairman Lloyd Bentsen, D-Texas, and House Speaker Wright as the two members whose support is needed.

AUCTIONS

FROM PAGE 1

Auction and Auto Dealers Exchange are independents. Others are part of chains owned by Anglo American, General Electric Credit Auto Auctions and Manheim Auctions.

Officials of most of the top auctions say dealer consignments are their most important segment. Most would like to see their dealer consignments comprise 50 percent or more of their total sales.

Lease and fleet vehicles also are important segments, followed by factory "buyback" cars and trucks.

Auction executives enjoy the high volume and prices generated by factory sales, but they wonder how long the manufacturers can continue to use buyback and guaranteed price programs to buoy new-car sales and production volume.

Said Tony Moorby, vice president of sales for Anglo, "The manufacturers are being forced into another year of program cars because retail sales are not supporting the level of production they like to maintain."

Most managers at the 10 largest auctions said the buyback programs will be strong for at least two years.

Joe Greco, manager of the Florida Auto Auction of Orlando, said roughly a third of the cars sold at his 11-lane auction on 90 acres are fleet and lease vehicles. The auction is owned by Manheim.

Contributing to the auction's success is its location, in central Florida with the huge number of daily rental companies serving thousands of vacationers.

Earlier this year, the auction set a single-day sales record by selling 4,095 units, or 68 percent of the 6,026 vehicles consigned, raking in $41 million.

Al Sindoni, general manager of second-ranking NADE, said his auction's success is due to "being in the right neighborhood and offering good service."

Unlike other top-selling auctions, NADE runs only a dealer consignment operation. But Sindoni said a reconditioning center will open by year-end, so the auction will have the capability to process fleet and factory vehicles. NADE, too, is owned by Manheim.

Clanton's Auto Auction, purchased earlier this year by GE Credit Auto Auctions for an estimated $37 million, attributes its success to customer confidence.

"We have culled out the bad dealers supplying the cars over the years," said Ray Clanton Sr., former owner and now general manager.

General Motors, Chrysler Motors and Ford Motor Co. are customers of Clanton's. Fleet, lease and factory vehicles account for roughly 20,000, or 38.9, percent of the auction's sales annually.

"Fleet and lease is very important and becoming more so because the factories control it," Clanton said. "We would be missing a big segment of the market if we weren't doing it."

David Harrison, general manager of the California Auto Dealers Exchange, said Southern California has the largest used-car market in the world. Although the auction doesn't have factory sales (program vehicles , its fleet and lease sales amount to 12 to 18 percent of its business, Harrison said.

Surprisingly for the region, he said, only 15 to 20 percent of the auction's business is import vehicles.

"There is a large number of domestic vehicles running around on California highways," he said.

Harrison said support from Manheim has contributed to the auction's growth since it opened as a greenfield operation 13 years ago.

Larry Tribble, owner of Southern Auto Auction, said he mingles imports with domestic cars at the auction instead of separating them, even though "Connecticut has one of the highest rates of import registrations in the country."

Southern Auto Auction is one of the few large independent auto auctions left. A 100-acre expansion project, including improved facilities, is on the drawing board. Tribble estimated the investment at $5 million.

He said the dramatic growth of factory buyback programs has affected the auction business.

"There are tremendous demands on auctions by the factories," he said. "An auction has to perform to their levels of expectation to keep their business. The factories are pushing thousands of cars a month through the auctions — it's an exciting time."

He said a major portion of the auction's business is disposal of repossessed and lease cars for Ford Credit, General Motors Acceptance Corp., Chrysler Credit, Toyota Motor Credit and "the financial arms of every major bank in the East disposing of vehicles."

Dan Troup, general manager of Columbus Fair Auto Auction, said dealer consignments account for roughly 75 percent of the auction's business.

"We look at factory programs as the icing on the cake for auctions because it can come and it can go," he said.

Joe Maltese, president of Michigan-based APTCO Auction, owned by Anglo-American, said 40 percent of the auction's business is factory buybacks, followed by roughly 30 percent dealer consignment and 30 percent fleet leasing.

"If the factory business went away, then we would have to recover the lost business in another market segment," he said. "Ideally, dealer consignments should be 50 percent or more — it's the most important part of the business."

PRODUCTION

Mexico auto output up 16.8% in October

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Mexican assembly plants built 27,409 cars in October, 16.89 percent more than the September total of 23,448 and 39.62 percent more than the year-ago month's 19,631.

For the first 10 months of the year, 208,047 cars were assembled, 26.08 percent more than the 165,009 completed during the same period in 1986.

Ford Motor Co.'s October output was affected by a strike at its Cuautitlan plant.

Ford's October build of 6,606 cars was 4.96 percent more than September's 6,294. Both months reflect only Tracer output.

In October 1986, Ford built 1,288 cars, all of which were Cougar, Thunderbird and Topaz models, produced at the Cuautitlan plant for sale in Mexico. Ford was not building Tracer at that time.

Ford's 10-month total of 52,401 compares with the 17,167 last year.

Chrysler Motors' Mexican output for October totaled 5,344. 31.40 percent more than September's 4,067 and 38.59 percent more the year-ago month's 3,856.

Through October, Chrysler had built 54,845 cars, an increase of 54.76 percent from the 35,438 built in 1986.

Chrysler assembles Aries and Reliant models for export to the United States and the LeBaron J for the Mexican market.

General Motors reported October production of 5,077 cars in Mexico, 11.66 percent more than the preceding month's 4,547 and 78.39 percent more than the 2,846 built in October 1986.

At the end of 10 months, GM had assembled 22,402 cars, 47.47 percent more than the 15,191 built in the comparable 1986 period.

GM produces the Chevrolet Celebrity, Buick Century and Oldsmobile Cutlass Ciera in Mexico. Of those, GM exports only the Celebrity to the United States.

Volkswagen reported it built 6,086 cars in Mexico during October, 5.60 percent more than the 5,763 built in September out 6.54 percent below the year-ago month's 6,512.

Nissan built 4,296 cars in Mexico during October, 54.69 percent more than September's 2,777, a model changeover month, but 16.24 percent below the year-ago month's 5,129.

North American car production for October totaled 776,941, 17.55 percent more than September's 660,948 but 9.69 percent below the 860,278 built in October 1986. At the end of 10 months, 6,875,047 cars had been assembled in North America, 10.87 percent below the 7,713,911 completed in the comparable period of 1986.

Car output is 91,867 in short week

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto production dipped from the prior week's as automakers worked only three days due to the Thanksgiving holiday.

Scheduled output of 91,867 fell 38.99 percent from the previous week's 150,582 but rose 19.72 percent from the year-ago holiday week's 76,736.

So far this year, 6,513,808 cars have been assembled, 8.94 percent below the 7,153,331 completed last year at this point.

Companies split last week's estimated production as follows: General Motors, 49.40 percent; Ford Motor Co., 26.16 percent; Chrysler Motors, 15.29 percent; Honda of America Manufacturing Inc., 4.29 percent; New United Motor Manufacturing Inc., 2.45 percent; Volkswagen of America, 1.31 percent; Nissan Motor Manufacturing Co. U.S.A., 0.86 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.24.

GM's Oklahoma City plant will shut down for inventory adjustment on Dec. 14. The plant is slated to return after the Christmas holiday.

Chrysler's St. Louis (No. 1) plant resumed output last week. It had been idle for two weeks for inventory adjustment.

All plants were closed last Thursday and Friday for the Thanksgiving holiday.

Holiday slashes truck schedule

U.S. truck production was scheduled at 50,412 units last week, a drop of 39.76 percent from the prior week's 83,679 due to the Thanksgiving holiday, but an increase of 54.72 percent from the year-ago week's 32,582, which was also a shortened by the holiday.

Year-to-date, 3,503,467 trucks have been assembled, 7.91 percent more than the 3,246,514 built last year at this point.

Because of the holiday, there was no overtime scheduled last week.

Car-truck build rises in Canada

Canadian automakers scheduled production of 24,755 cars last week, 26.22 percent more than the previous week's 19,613 and 13.39 percent more than the year-ago week's 21,831.

So far this year, 726,261 cars have been built, 25.56 percent below the 975,596 assembled last year at this time.

Targeted truck production of 19,407 units last week was 8.99 percent more than the prior week's 17,806 and 45.51 percent more than the year-ago week's 13,337.

Year-to-date, 751,532 trucks have been completed, 3.91 percent more than the 723,254 built last year at this point.

Chrysler Motors' Bramalea, Ontario, plant resumed output last week. The plant, which assembles the Eagle Premier, had been closed since Nov. 4 because of quality problems.

Rift brews in Chrysler, UAW affair

Union talks tough on path to '88 talks

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

HAINES CITY, Fla. — As preparations for 1988 national contract bargaining at Chrysler Motors got under way here last week, the UAW's top negotiator with Chrysler called labor-management relations the worst in many years.

But his counterpart at Chrysler said he had "no evidence of that at all" and called relations "positive."

Marc Stepp, UAW vice president in charge of the Chrysler department, said in an interview, "I had a lot of trust and respect for former Chrysler labor relations people. But today, the Gerry Greenwalds and the Tony St. Johns do not have my trust."

Stepp said the sore point is Chrysler's outsourcing, "in violation of the spirit of the 1985 agreement."

Stepp made his remarks two days before a meeting between UAW local leaders and the company's top management, including Chrysler Motors Chairman Gerald Greenwald, Chrysler Motors Vice President Anthony St. John and Chrysler Corp. Chairman Lee Iacocca.

St. John, who is Chrysler's top negotiator, said in a telephone interview after the meeting, "Joint activities, especially during the past two years, reflect positively" on the UAW-Chrysler relationship.

St. John said the annual joint meeting "is probably unique in the auto industry."

"You must have caught him at a bad time," he said of Stepp's charges.

Stepp said in the interview, "The relationship between Chrysler and the international union is worse than it's been in many years."

Later he said the joint meeting "went very well," but that it did not provide "the opportunity or the setting" to discuss the outsourcing problem.

Stepp also said there was no opportunity to discuss Greenwald's remark to the union leaders that an economic downturn might delay construction of the new Jefferson plant in Detroit. Stepp said the Chrysler executives "just came and spoke and left."

The Chrysler-UAW meeting in Florida followed a meeting of the UAW national Chrysler council, which includes local leaders from 70 units forming nine subcouncils.

The subcouncils elected a 10-member national bargaining committee, which will begin negotiations with Chrysler next summer.

The Chrysler contract expires

More incentives on GM models
Four of the five General Motors car divisions have announced incentives for buyers of selected cars and trucks. This Buick Century is offered with a $600 rebate or free air conditioning between Nov. 25 and Jan. 11. **Story on Page 59.**

Trucks pace November gain

21% rise helps U.S. vehicles top '86 despite car falloff

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

November car and truck sales were stronger than expected coming into the final stretch, giving domestic and imported automakers confidence that consumers have not spun out since Black Monday.

For the second month in a row, the rise in light-truck sales overshadowed the drop in domestic car sales. They combined for a modest sales gain of 2.41 percent over the same month last year.

Combined sales of 791,821 U.S.-built light trucks and cars were recorded last month compared with 773,175 domestic vehicles in November 1986.

Light-duty trucks were up 21.32 percent to 305,853 from 252,101 units in November 1986.

However, for the eight domestic car makers, November sales fell 6.74 percent to 485,968 units compared with 521,074 for the same month a year ago.

The Big 3 domestic makers put in place incentives during the month that helped bolster November's light-duty truck sales by 21.32 per-

L-M to sell vehicle from Ford-Nissan

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — The proposed agreement between Ford Motor Co. and Nissan Motor Co. to develop and produce a multipurpose vehicle will be ready for approval by Ford directors in April or May.

Sources close to the project say Nissan executives are expected to sign the agreement the following month.

Negotiators have set initial annual production at 100,000 units, with a 50-50 split between the two companies. The vehicle will be introduced in the North American market in 1992.

It will be marketed by Ford through its Lincoln-Mercury dealers and by Nissan through its existing dealer network.

A 20-member team formed by the two automakers last May has agreed that Nissan will be responsible for design and development of the new vehicle. Production will be handled by Ford, which is expected to assign the work to one its existing assembly plants.

Three of Ford's U.S. assembly plants are producing on single shifts; the rest are running two shifts daily. The company said last week, however, that future capacity requirements will play a role in determining whether Ford will be interested in Volkswagen's Westmoreland County, Pa., plant, scheduled to close in mid-1988.

Design and styling of the multipurpose vehicle is being done by Nissan Design International, a San Diego-based Nissan subsidiary that has developed three Nissan image leaders, the Hardbody pickup, the Pathfinder sport-utility vehicle and the Pulsar NX sporty coupe.

RAPID RIPOFF: *Innovative thieves use a file, elbow grease and pick their targets, primarily Japanese*

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — A new, fast technique that permits thieves to open auto doors and start engines in less than 30 seconds is causing great concern among law enforcement officials in Southern California and across the United States.

The technique involves a regular car key that has been filed down to a point. It is used to open car doors and start ignitions, primarily on cars made in Japan.

The "keys" — classified as picks by some police officials — became a serious problem in Southern California about two years ago.

Since then, the filed keys and the resulting problems have become more widespread in scope, surfacing in Northern California, Oregon, Washington, Colorado, Texas, Virginia, Louisiana and British Columbia, according to the International Association of Auto Theft Investigators.

Law enforcement officials estimate that filed keys are used in more than 25 percent of the thefts of Toyotas, Nissans and older Datsuns.

In the first half of 1987, according to the California Highway Patrol, 80 percent of the most-often-stolen cars in California were Toyotas, Nissans and Datsuns, ranging in model years from 1976 to 1985. Volkswagen Beetle models

LANCE GRAVES

from 1966 and 1967 filled the two other top spots.

Approximately 112,700 vehicles were stolen in California during the six-month period, an increase of 14 percent over the same period a year earlier, the highway patrol said. The most commonly stolen car is a late-model Toyota. The average value of a stolen auto is $4,500.

In California, about 90 percent of the stolen cars are recovered, but only 63 percent of them are considered to be in driveable condition, the highway patrol said.

In Los Angeles, police believe the filed keys account for only a small percentage of the stolen vehicles. However, in neighboring Orange County, William Bierer, a highway patrol vehicle theft investigator, said he believes the great majority of stolen Japanese vehicles are taken with filed keys.

"We have a very, very large problem," Bierer said. "They are very sophisticated."

Detectives Grant Varner and Marcus Frank, of the Westminster, Calif., police department, are credited with first recognizing the extent of the problem. In August 1986, the Westminster Police Department made a nationally distributed training videotape entitled "Auto Theft Made Easy," showing a 15-year-old boy using a filed key.

The filed keys work like a pick to open car doors and, in the same manner, start the engine, Frank said. A filed key that may not fit one Toyota or Nissan may work in another model, parked elsewhere in a parking lot, so the thieves keep trying until one or more cars are opened

GM economist puts '88 sales near '87 total

Eads says U.S. muffed chance to slash budget

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' top economist says the Reagan administration and Congress missed a golden opportunity to reduce the national deficit following the Oct. 19 stock crash, and another opportunity doesn't appear to be on the horizon.

Nevertheless, George Eads, GM's corporate economist, doesn't predict a recession for 1988. However, his scenario calls for slower economic growth in 1988 than in 1987, with motor-vehicle sales off slightly.

Eads is forecasting motor-vehicle sales of 14.9 million units, just below 1987's expected 15.0 million. His breakdown for 1988 is 10.1 million cars and 4.8 million trucks. That compares with 10.1 million cars and 4.9 million trucks expected by GM for 1987.

In his first interview with Automotive News since joining GM in 1986, Eads said the economy could go two ways other than the path GM is predicting.

There is some chance, he said, that the Oct. 19 stock market crash and subsequent insufficient action by the government to contain the deficit could develop into a full-blown recession.

Eads said for that to happen, the financial markets would have to experience more turmoil than they have to date and consumer confidence would have to falter more.

"It is not impossible," Eads said, giving it a 20 to 25 percent chance of occurring.

Another alternative, but a less likely one, would be that the economy shrugs off the crash and economic growth climbs. However, Eads gives that alternative only 10 percent probability.

The economy would have had a better chance had Washington taken some real action on trimming the budget deficit, Eads said.

AUTOMOTIVE NEWS JOE WILSSENS

Eads: upcoming presidential election doesn't hold any promise for solving the deficit problem

"I think we just missed a major opportunity to truly put all parts of the domestic spending, as well as the tax side, on the table and come up with something that would really produce over a three- to five-year period a real reduction of deficit," Eads said.

Eads is particularly well qualified to address the political scene; he served as a member of President Carter's Council of Economic Advisers from June 1979 to January 1981. He helped develop policies on energy, agriculture, industry, international trade and regulatory reform. Before joining GM, Eads had been dean of the School of Public Affairs at the University of Maryland.

He figures that the advertised $30 billion deficit-cutting package will amount to only about half of that in true cuts.

"At one point," Eads said, "I said the real fear (from the stock market crash) was there for maybe five hours, but it may not have been there even that long."

Now, Eads said, it appears the economy will simply "muddle through" as problems mount and solutions become more difficult.

"We missed this one (to cut debt)," he said. "I don't see what would naturally generate the opportunity."

He sees negotiations on budget cutting reopening only under the most dire circumstances, namely a deep recession.

"Seeing how quickly they shrugged off what we got," he said, "I don't like to think of what it would take to reopen that."

Furthermore, Eads doesn't see the upcoming presidential elections holding any promise for solving the deficit problem, particularly because none of the candidates has rushed forth with innovative solutions since the Oct. 19 collapse. He expects presidential candidates to avoid economic issues because there is no way to open up the debate and come out looking good as a candidate.

"In terms of seeing bold new solutions, I don't see it as a time for that bold new solution," Eads said. "That would mean a willingness to tackle tough problems, and that means offending somebody. You can't win an election by offending somebody."

Instead, Eads expects that Republicans will look at the bright side and talk about the expansion, the number of jobs created and how well the economy is doing. If the economy is showing signs of a recession, the Democrats will blame it on Reagan but will avoid saying what they will do about it.

Coachmen to sell vans with Amway

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

LOUISVILLE, Ky. — Coachmen Industries will market van conversions through Amway Corp. dealers and distributors beginning in January.

Its specially designed Starflyte conversion packages will be available on Dodge, Chevrolet, Ford and GMC chassis.

Dealers have an opportunity to earn money on both the chassis and the conversions.

They first negotiate a regular chassis price with the customer. Separately, they will be able to sell conversion packages retailing for $4,860, without options, for a $150 profit.

Coachmen will wholesale Starflyte conversions to dealers, and Coachmen will pay Amway distributors their agreed-upon sales commission.

Coachmen will get its van chassis from Amway's Auto Dealer Network, a group of 1,500 car dealers in 26 states, and through some of its own participating dealers. It has 200 dealers selling its own Coachmen and Consolidated Leisure conversions.

In areas where neither Amway nor Coachmen have dealers, Amway's National Fleet Services Inc., will find local ones to meet demand, William Snook, president of Coachmen Vans said.

National Fleet administers the Amway Auto Network. It is the tie between Amway's auto dealers and its 750,000 distributors best known for selling cleaning and household products.

Snook doesn't feel the Amway conversions will compete with Coachmen's other conversions because of the way they are priced, equipped and styled.

He stressed that Coachmen was selling conversion packages — not vans.

"Everything is going through franchised car dealers. We, being a bailment pool company, have to be very careful not to infringe on any areas of our bailment pool agreements," he said.

Bailment pool companies are allowed to release converted vans only to dealers that hold a franchise for that chassis. That means Coachmen cannot, for example, sell a converted Chevy van to a GMC or Ford dealer.

Coachmen was one of about five or six converters to bid on the contract which, Snook feels, will substantially increase its 2,000-unit-a-year van conversion business.

"We're very excited about it. When you get 750,000 people pitching your product, there have to be some very positive results," Snook said.

He conceded, though, that high shipping costs may prohibit Coachmen from being price-competitive in in Western and Southwest markets. Its van plants are concentrated in the Midwest.

Coachmen has West Coast plants it could use to convert vans, though, if there's enough volume increase, Snook said.

NHTSA lists models for 35-mph crashes

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has listed the 34 new vehicles it will crash-test as part of its New Car Assessment Program for the 1988 model year.

The safety agency said 24 passenger cars, four vans, five pickup trucks and one multipurpose vehicle will be crashed at 35 mph into a fixed barrier. The results will be announced beginning in early 1988.

Four-door cars to be tested are: Acura Legend, Chevrolet Corsica, Chrysler New Yorker, Dodge Colt wagon, Ford Tempo, Mazda 929, Nissan Maxima, Nissan Sentra wagon, Oldsmobile Delta 88, Peugeot 505, Renault Medallion and Volvo 740-GLE.

Two-door models: Buick Regal, Chevrolet Beretta, Daihatsu Charade, Ford Festiva, Honda Civic hatchback, Mazda RX-7, Nissan Pulsar, Pontiac LeMans, Saab 900-S hatchback, Toyota Corolla, Toyota Tercel and Volkswagen Fox.

Pickups to be tested: Chevrolet 1500 CK, Dodge D-150, Ford F-150, Isuzu Spacecab and Nissan. Vans to be crashed: Chevrolet Astro, Chevrolet G20, Nissan and VW Vanagon. A Mitsubishi Montero multipurpose vehicle also will be tested.

A crash test at 35 mph is 5 mph faster than the speed prescribed for compliance with several existing federal motor-vehicle safety standards, including the standard for "occupant crash protection." The crash tests are designed to indicate, for vehicles within the same size and weight class, relative levels of occupant protection and safety performance.

Instrumented dummies are used in the tests. The head, chest and upper legs of the dummies are equipped with instruments that monitor impact forces. Each dummy is protected by a vehicle's standard occupant protection equipment, either manual safety belts or automatic belts and/or air bags.

NHTSA said it "will continue to examine several aspects of the program, particularly the relationship of these test results to real-world crashes and injuries, in order to improve crashworthiness information provided to consumers."

CAR TOYS: *Gifts few will find when Santa leaves*

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

And now, for the self-indulging auto votary to whom money is just a way of keeping score, comes a license-plate frame in 24-carat gold, priced at a mere $20,000.

Or how about gorging one's self on a $167,000 AMG 300E "Hammer." To order, just dial an 800-number or pop a check into the corner mailbox.

If that's stretching your budget a tad, you can settle for a replica of a Ferrari Testarossa in flawless crystal for the pauperish sum of $1,499.95.

All this and more is available by mail order from the newest edition of the Beverly Hills Motoring Accessories winter catalog, out just in time for the holidays.

"I don't know if anyone ever ordered the AMG 'Hammer' by mail, but I suppose they could," a company spokesman said.

Can't think of the ideal Christmas gift for the pretentious BMW owner in your life? Perhaps a BMW cellular armrest fitting almost all 3-, 5-, 6- and 7-series models with standard seats. Cost? A bargain at only $599.95 in leather.

For those afternoon respites of Perrier and Brie during leisurely countryside motoring excursions, Mercedes-Benz owners can equip their coupes and sedans with a refrigerator-freezer for $1,995.

The security-conscious can gain peace of mind with a "Blitz-Safe" for $199.95. It recedes the stereo into the dash, leaving only a locking flap and the appearance that the car has no stereo.

Says the manufacturer, "Even if theft is attempted, it would take an hour and a half for a thief to remove your stereo."

Other trifles include a car safe called "the Vault" with bolts for $99.95; and an electric convertible hardtop hoist for the garage at $499.

$20,000 license-plate frame is 24-carat gold

SALES

FROM PAGE 1

cent and helped sales of U.S.-built cars gain 2.48 percent in the final 10-day period over last year's comparable 10 days.

Imported car sales fell 5.83 percent for the month with the decline especially apparent in the luxury bracket. But the import market looked brighter in another light: November 1986's import total set a record for the month, helped by the pending reform of the U.S. tax laws. Many European importers expected to be down this year.

Analysts looked for improvement but were surprised by the strength of November's final 10 days. Some admitted they may have lowered forecasts too much in light of the stock market omen.

"Consumers are obviously not in the grips of panic," said Ann Knight, auto analyst with Paine-Webber Inc., New York. "Sales are where they would have been without an Oct. 19."

David Healy, an analyst at Drexel Burnham Lambert, said "I think the stock market crash isn't impacting car sales. This is the fourth stronger 10-day sales period."

Jack Kirnan, analyst, Kidder, Peabody and Co., said he was "dumbfounded" because all economic factors — income growth, interest rates, debt, consumer confidence levels — "were on the bearish side." He suggested that the 2.5 percent increase in employment levels over the last 10 months may have helped. "We got a surge in manufacturing employment and these individuals can buy cars," because they have higher incomes, he said.

Import and domestic car sales in November of 732,052 dropped 6.43 percent compared to 782,389 in November 1986. Two years ago, the November count was 763,304.

Of the Big 3 automakers, Ford delivered 3.62 percent more cars; General Motors sold 11.90 percent fewer cars; and Chrysler Motors' sales slipped 3.98 percent below November 1986.

Import-car sales declined 5.83 percent for the month to 246,084 from 261,315 last year. Imports accounted for 33.62 percent of the November U.S. market this year. Last November, imports took a 33.39 percent share.

The industry selling rate in November this year averaged 30,502 cars a day this year compared with 32,560 in 1986. There were 24 selling days in both Novembers.

In terms of overall market share for November, GM's domestic cars took 30.74 percent; Ford's domestics took 20.59 percent; and Chrysler's domestics (including Jeep/Eagle Division), 9.93 percent.

U.S.-built car share for Honda was 3.40 percent; Nissan, 0.67 percent; Toyota, 0.50 percent; Volkswagen, 0.48 percent; and recent entrant Mazda captured 0.07 percent of the market.

The eight domestic automakers gained real momentum in the final 10-day period of November this year. Car companies started November with a 10.41 percent decline in the first 10 days. Sales fell 12.03 percent in the mid-November period, although there were more deliveries and a stronger daily selling rate in that period than in the first one.

Domestic carmakers finished the month with a flourish, delivering 2.48 percent more cars in the final 10 days than a year ago.

"Incentives have helped us," said L.R. Windecker, analyst at Ford, which had the strongest gain among all eight domestics in the final period. "We are in a relatively good position."

Cougar sales surged 300 percent for the month and Thunderbird sales moved up 26.57 percent. Both models were in short supply a year ago. Incentives helped both models, said Joe Glowacki, vice president and general manager of Rice and Holman Ford, Mt. Laurel, N.J.

GM sales were off 11.90 percent for the month in spite of an improvement of 3.54 percent during the Nov. 21-30 sales period. Corsica/Beretta continued to outperform most other GM makes.

Although the luxury import market seems to be lagging, Cadillac reported Allante deliveries increased and Eldorado sales moved up 51.4 percent over the previous November.

Chrysler Motors sales ebbed 3.98 percent below last November. But sales of the reskinned Dodge Daytona jumped 547.54 percent in the month, perhaps helped by flashy new TV spot and print advertising and a lower price.

Although import sales — especially among the higher-end makes — dropped in November, the drop generally was not as substantial as in October.

Luxury import-car makers reported the following declines compared with November 1986: Alfa Romeo, 57.34 percent lower; Peugeot, 44.30 percent; Porsche, 28.18 percent; Saab, 21.70 percent; and Mercedes-Benz, 19.57 percent.

Sales of Honda's high-line Acura rose 22.20 percent in November and Hyundai sales were up 13.49 percent in November. Deliveries picked up 5.99 percent for Volkswagen imports, and Mazda import deliveries gained 2.42 percent.

AUCTION BRIEFS

GE Credit Auto Auction has purchased the Ohio Auto Auction, bringing to 17 the number of auctions owned by the financial service company.

The purchase price for the auction was not disclosed. It was purchased from its founder, Henry Stanley Jr. The auction has four selling lanes and recently expanded its reconditioning center to 25,000 square feet.

Howard H. Price, vice president — operations of GE Credit Auto Auctions, has been assigned territorial management responsibility for the auction. Reporting to Price will be Whitey Huff, who will continue as general manager of the auction. Bill Humphrey stays as fleet and lease manager.

David Frazier, formerly vice president — finance for GE Credit Auto Auctions, will be vice president of sales and operations.

A New Year's eve car preview party will be held at the Miami Beach Convention Center, Miami Beach, Fla., prior to a collector-car auction and show planned for Jan. 1-3 at the center.

The Miami sale will include a 1927 Bugatti Type 57 featuring a body by Graber. Other top-dollar cars include a 1932 Duesenberg J-441 Derham dual windshield phaeton and a 1931 Cadillac Fleetwood roadster.

Cars of the stars include a 1956 Cadillac Sedan DeVille originally owned by Elvis Presley. Singer Barry Gibb has consigned a 1955 Buick convertible, a 1965 Mustang GT convertible and a 1955 Cadillac Series 62 convertible.

Indiana-based **Kruse International** is the host for the auction.

AUCTION DATES

American Motors

Dec. 8 — Statesville Auto Auction, Statesville, N.C.

Dec. 9 — Kansas City Auto Auction, Kansas City, Mo., and Columbus Fair Auto Auction, Columbus, Ohio

Dec. 10 — Corry Auto Auction, Corry, Pa.

Chrysler Motors

Dec. 8 — American Auto Auction, Walpole, Mass.; Arena Auto Auction, Chicago; Golden Gate Auto Auction, Fremont, Calif.; Hatfield Auto Auction, Hatfield, Pa.; and Dallas Auto Auction, Grand Prairie, Texas

Dec. 9 — Southwest Auto Auction, Phoenix, Ariz.; Butler Auto Auction, Gibsonia, Pa.; Minneapolis Auto Auction, Plymouth, Minn.; and Denver Auto Auction, Aurora, Colo.

Dec. 10 — Northway Exchange, Clifton Park, N.Y., and Indianapolis Auto Auction, Indianapolis

Dec. 15 — Florida Auto Auction of Orlando, Ocoee, Fla.; Aptco Auto Auction, Taylor, Mich.; Metro Auto Auction of Kansas City, Lee's Summit, Mo.; NuCarPrep System, Santa Fe Springs, Calif.; and Hatfield Auto Auction, Hatfield, Pa.

Dec. 16 — A.D.E. of Birmingham, Birmingham, Ala.; Columbus Fair Auto Auction, Obetz, Ohio; South Seattle Auto Auction, Kent, Wash.; and Southern Auto Auction, Warehouse Point, Conn.

Dec. 17 — Clanton's Auto Auction, Darlington, S.C., and Fredricksburg Auto Auction, Fredericksburg, Va.

Ford Motor Co.

Dec. 9 — Indianapolis Auto Auction, Indianapolis, and Metro Auto Auction of Kansas City, Lee's Summit, Mo.

Bank seizes dealer funds from Canadian auction sale

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

OSHAWA, Ontario — More than 150 Canadian used-car dealers are out a total of $1.5 million after Lloyd's Bank in Whitby seized funds from the Oshawa Auto Auction's Oct. 21 car sale.

Money from the sale of automobiles was being held in trust at Lloyd's Bank. The Oshawa Auto Auction is Ontario's second-largest auto auction, selling roughly 750 vehicles per week.

According to Bob Beattie, director of the Ontario Used Car Dealers Association, auction owner Frank Wills is considering two offers for the business from private individuals.

Dealers had considered filing a lawsuit against the bank but are now waiting the outcome of the sale that is expected to result in the return of their money.

Beattie said legal action now could kill the offer. But he warned that if the sale falls through, the dealers are ready to pursue legal action.

"The bank knows its actions were wrong," said Beattie. "They knew the money was in trust."

He said the bank seized the money because there "were some financial difficulties between it and the auction."

As an agent for dealers, checks from buyers are normally deposited in trust in the auction's account at the bank.

After liens and titles are researched, the auction issues a check to the seller, usually within two days of the sale.

According to Beattie, dealers could have lost up to $2.5 million. The bank wanted to seize the money from the Oct. 28 regular sale but the auction didn't deposit the money after hearing about the seizure of its other funds.

Beattie said dealers canceled nearly all of their checks to the auction and then settled accounts among themselves.

"It was a real show of cooperation," he said.

Paul Feldman, lawyer for the auction, declined to comment on the seizure of the money by the bank. Bank officials were unavailable for comment.

The bank also returned checks marked "NSF" (non-sufficient funds) that had been issued by the auction to dealers, said Beattie.

Lloyd's Bank had sought appointment of a receiver for the auction but its request was denied by the court.

A "monitor" was named instead. Beattie explained that a monitor studies a company's liabilities and assets, then reports its findings to the court.

As of late last week, the bank again had asked the court to appoint a receiver for the auction.

But if Wills reaches an agreement to sell the auction, a receiver will not be necessary, explained Beattie.

The auction holds a sale every Wednesday but has been closed since the funds were seized.

Japanese share drops in Europe

Political climate remains volatile despite slowdown in imports

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — After several years of growth, Japanese automakers apparently will finish 1987 with a market-share decline in Europe.

But the political clamor about Japanese imports has not quieted, and a new report predicts a sharp rise in combined Japanese market share in 1988 and continued growth during the next five years.

Through the first 10 months of 1987, Japanese car sales in Western Europe rose only 0.3 percent to 1,199,700, while overall sales climbed nearly 6 percent to 10,554,700, according to industry estimates compiled by Automotive News.

The Japanese market share slipped from 12 percent through the first 10 months of 1986 to 11.4 percent for the same period this year. Japanese sales in October alone declined 1.4 percent.

An informal agreement with the European Community caps Japan's annual growth in shipments to the Common Market at 10 percent. The 1987 increase is expected to wind up at about 7 percent.

The drop in market share follows an angry response by European politicians and industry leaders to a dramatic surge in car imports from Japan in the first quarter. The Japanese insisted at the time that the heavy imports were merely to replenish inventories following an intentional drop-off in late 1986 to comply with the 10 percent quota.

In a speech in Brussels last week, European Commissioner Karl-Heinz Karjes staked out a new bargaining position with the Japanese. He said that European countries would be willing to ease national import restrictions in exchange for a halt in the growth of imports from Japan during the next several years.

Assorted restrictions on Japanese sales are now in place in France, Italy, Spain, the United Kingdom and Portugal. The national limits could vanish in the face of efforts to create a single European market by 1992, but some auto executives fear that the Japanese can better exploit a unified European market.

Karjes said the individual restrictions will be eased only if Japan agrees on a "stabilization" plan carrying through 1992 and possibly longer. He is scheduled to take his proposal to Tokyo this month.

Meanwhile, DRI-Europe, a London-based research organization, has predicted that Japanese sales in Europe will rise from about 1.36 million in 1987 to 1.38 million next year, even though it believes the overall market will decline. Japanese cars' market share will improve almost 12 percent, according to DRI.

By 1992, it projected a 12.6 percent share on sales of 1.5 million units, with the rise due mainly to transplant production.

Each of the top three Japanese companies in Europe — Nissan, Toyota and Mazda — lost market share through the first 10 months of 1987. The leader, Nissan, had 3 percent of the European market through October, with sales volume up 1.6 percent to 312,000.

EUROPEAN SALES

Manufacturer	10 months 1987	1987 share	10 months 1986	Change '87 vs '86

** Includes Alfa Romeo
*** Peugeot, Citroen, Talbot
**** Opel, Vauxhall, Isuzu, GM-U.S./Canada

Volkswagen Group held the top spot in the European sales race through October, with 1,578,400 units, good for 15 percent of the market and a 9.4 percent increase in volume over the same period in 1986. The rise is attributable to VW's Audi and Seat divisions, both of which increased 10-month sales 32 percent — to 296,000 and 209,300, respectively — while the VW brand rose just 1.1 percent.

Fiat Group, including Alfa Romeo, was second at 1,522,800, an improvement of 8.1 percent and a 14.4 percent share of the market. Ford was next at 12 percent on sales of 1,271,600, an increase of 8.6 percent. Peugeot SA, including Peugeot and Citroen, followed at 11.9 percent. Through October, Peugeot SA sales were 1,250,900, an 11.8 percent improvement.

General Motors was fifth at 1,132,000, an increase of 2.1 percent and a 10.7 percent share. Renault was up 7.6 percent across Europe to 1,095,900, good for 10.4 percent of the market.

Though the impact of the Oct. 19 stock market plunge on European sales was not fully evident in the figures, overall sales were up 4.8 percent in October to 1,070,000.

DRI downgrades world market forecasts

By Richard Johnson and Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTERS

DRI-Europe has revised its 1988 worldwide new car sales forecast downward by 498,000 units to reflect October's Wall Street collapse and the general sluggishness in demand for cars in the United States and in Europe.

It said world car sales would finish the year at 32,293,000 and predicted that 1988 worldwide car sales will slip 1.54 percent or 498,000 units to 31,795,000.

DRI also scaled back its 1990 forecast of 12 months ago by 6.5 percent, to 32,698,000 cars.

The London-based research group's most recent outlook for the finish of 1987 and 1988 is more pessimistic than its earlier second-half forecast. DRI-Europe is predicting lower sales this year in North America and Europe, while forecasting some improvement in sales in Asia-Pacific, especially with South Korean exports.

Projected 1988 U.S. car sales are expected to fall off to 9.7 to 9.8 million units, which is down 700,000 units or 6.66 percent from the earlier forecast of 10.5 million units.

North American sales are expected to decline about 3.74 percent or by about 422,000 units to 10.8 million in 1988 compared with about 11.3 million in 1987.

The slowdown in European car demand is expected to lead to a decline of 400,000 units for a total of 11.6 million in 1988 compared to the 12 million forecast for 1987.

DRI said "crash effects have compounded the slowdown already expected for 1988."

"The macroeconomic impact is not large after lower interest rates are taken into account," according to the report. "But West Germany must handle a further, damaging rise of the deutschemark in Europe by mid-1988." Not only are registrations expected to fall from 2.70 million to 2.63 million, but the U.S. sales decline means lost production. Output will fall to 4.7 million from 4.3 million in 1987, said DRI-Europe.

United Kingdom car sales are projected to decline 7.5 percent to 1.82 million in 1988. Its sales will move past Spain into fourth place in Europe by 1989.

DRI predicts that France's car sales will fall below 2 million units. But it expects Fiat's new Tipo subcompact range will help boost Italy's car sales in 1988. It projects the Italian market will "remain at a high level of 1.89 million units after 1.91 million in 1987."

New registrations in Japan are expected to increase 1.77 percent to 3.22 million units in 1988, up from 3.16 million units in 1987. Japanese production is expected to decline from 7.4 million to just under 7.3 million units. South Korean exports of new cars should increase from 512,000 units in 1987 to 733,000 in 1988, a rise of 43.16 percent or 221,000 units, according to DRI's forecast.

The research organization pointed to the Wall Street collapse, sluggish 1.7 percent U.S. gross national product growth next year, a rising federal deficit and the continued downturn of the dollar as factors prompting the revision.

"The dollar will continue to slide with or without G7 action, causing a reassessment of the global balance of automobile production," DRI said, referring to the seven Western economic powers.

North American car production will be about 7.5 million or 100,000 units more than 1987's projected 7.4 million cars according to DRI. Western European car production will be cut by about 444,000 units in 1988 because of projected slow demand. Production is anticipated to drop from 12.4 million cars in 1987 to 11.9 million in 1988.

PRODUCTION

Auto output trails '86

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled domestic auto production increased tremendously over the prior week's build, which was held down by the Thanksgiving holiday.

But the total couldn't match that of the year-ago week.

Automakers targeted production of 151,761 cars last week, 64.72 percent above the holiday week's 92,130 but 2.79 percent below the year-ago week's 156,114.

So far this year 6,665,832 cars have been assembled, 8.79 percent below the 7,307,873 built last year at this point.

Companies split last week's estimated output as follows: General Motors, 48.76 percent; Ford Motor Co., 26.79 percent; Chrysler Motors, 16.14 percent; Honda of America Manufacturing Inc., 3.74 percent; New United Motor Manufacturing Inc., 2.31 percent; Volkswagen of America, 1.05 percent; Nissan Motor Manufacturing Co. U.S.A., 0.88 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.33 percent.

Chrysler will lay off 600 workers at its St. Louis (No. 1) plant in January due to slow sales of certain models. The St. Louis facility builds the Chrysler LeBaron J and LeBaron K; the Dodge Aries, 600 and Daytona; and the Plymouth Reliant and Caravelle models.

As reported earlier, GM will permanently close its Pontiac, Mich., plant Friday, affecting about 1,700 workers. The plant assembles the rear-wheel-drive Buick Regal, Oldsmobile Cutlass Supreme Classic and Chevrolet Monte Carlo.

GM permanently closed its Framingham, Mass., plant last week because of slow sales of its Chevrolet Celebrity and Oldsmobile Cutlass Ciera models. About 3,700 workers have been placed on indefinite layoff.

Ford scheduled Saturday overtime at its Wixom, Mich.; Edison, N.J.; and Kansas City, Mo., plants.

All Ford plants except Edison are slated for daily overtime this week.

Chrysler's St. Louis (No. 2) plant scheduled overtime last Saturday. That plant and the Sterling Heights, Mich., facility are slated for daily overtime this week.

Truck build tops 83,000

Domestic truck production was scheduled at 83,713 units last week, 67.81 percent more than the previous week's 49,886 and 22.95 percent more than the year-ago week's 68,089.

The prior week's output was reduced by the Thanksgiving holiday.

General Motors slated overtime last Saturday at its Flint, Mich., and Moraine, Ohio, plants, and Ford Motor Co. scheduled Saturday overtime at its Wayne, Mich.; Twin Cities, Minn.; Lorain, Ohio; Louisville, Ky.; and St. Louis plants.

Canada car assembly dips

Scheduled Canadian auto production of 22,404 cars last week was 1.26 percent below the previous week's 22,690 and 4.20 percent below the year-ago week's 23,386.

So far this year, 746,600 cars have been completed, 25.11 percent below the 996,930 built last year at this time.

Truckmakers targeted production of 18,988 units last week, 5.40 percent more than the prior week's 18,015 and 38.30 percent more than the year-ago week's 13,730.

Year-to-date, 769,128 trucks have been assembled, 4.27 percent more than the 737,628 built last year at this point.

Brazil tallies record for auto exports

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO, Brazil — The Brazilian auto industry chalked up record exports of $2.4 billion through the first 11 months of 1987 and expects to maintain a similar performance for the entire year.

Andre Beer, president of ANFAVEA, the automakers' association, said domestic sales dropped 34.7 percent compared with the first 11 months of last year. He said he expects the situation to worsen because of the 20 percent price increase granted by the government in November.

At Autolatina, exports are expected to total $1 billion for the year, said Wolfgang Sauer, the company's president.

The Ford-Volkswagen holding company is currently battling the government in court over its right to price products to cover inflationary cost increases. Autolatina believes an agreement signed earlier this year frees the company to raise prices to cover inflation. With inflation running at 300 percent in Brazil, a second price increase is likely this month.

Sauer added that total annual losses at the two companies are still forecast in the $300 million-$400 million range. Nonetheless, said Sauer, the company has gone ahead with investments. It is honoring an agreement signed with the government earlier this year that freed pricing in exchange for a commitment to invest and export.

"We've invested $200 million this year and will be putting in $250 million in 1988," he said.

Sauer said Autolatina hopes that exports next year will maintain their strong performance. But he recognizes the difficulty of doing so, given the uncertain economic climate in the wake of the Wall Street crash.

It may be particularly difficult for its U.S. export operation, which started this year by exporting VW Fox models to the United States.

For the industry as a whole, Beer said exports will almost certainly not be as good next year.

Chrysler kills AMC's Eagle

SOUTHFIELD, Mich. — Chrysler Motors plans to discontinue production of the low-volume, four-wheel-drive Eagle station wagon on Dec. 14.

Eagle was an American Motors model. Chrysler acquired AMC in August.

Chrysler cited declining sales among the reasons for the production halt.

The 1980 Eagle was the first domestic mass-produced 4wd automobile. At one time, Eagle also was offered in two- and four-door sedan versions.

Sales have declined steadily since the peak year of 1983, when 31,207 units were sold. U.S. sales for 1987 through the end of November were 4,039.

"Programs to keep our dealer body competitive require tremendous investments, severely restricting funds to update existing products, especially those products based on old technology and of declining interest to our customers," said E. Thomas Pappert, Chrysler Motors group vice president — sales.

Chrysler comes to crossroads

Will Eagle lure yuppies?

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors' launch of its new Jeep-Eagle franchise is more than the liftoff of a new division.

Its success or failure in digesting the former American Motors and creating the new Eagle car network will weigh heavily on the company's future image and its bottom line.

Chrysler is launching the new network amid a recent spate of questions about its performance and prospects.

Domestic-car sales in the 1987 calendar year have dropped 22 percent in a car market that is off only 10 percent.

The company is burdened with excess production capacity at a time when the industry is facing decreased demand and an increasing number of competitors.

Chrysler's breakeven point has risen in the months before and since the AMC acquisition, forcing employee layoffs, spending cuts and some product and program delays.

Some of the company's dealers have seen their profitable operations slip into the red in the final quarter of the year. Some lower-volume dealers are no longer able to accept additional inventory because they have reached their credit limit.

In addition, Chrysler is grappling with its problems at a time when the industry as a whole faces an uncertain future.

For many of the company's dealers and outside analysts, the underlying issue remains the future of the Jeep-Eagle Division.

"Can they make anything out of Eagle? That is the question," said Maryann Keller, auto analyst with

'No Child Without a Christmas'
The goal of this year's Chevrolet-Pontiac-Canada Group employee Christmas show was to raise funds to buy gifts for at least 1,000 underprivileged children in the Detroit area. More than 35 acts took the stage, including St. Nick and his wife. Donations were accepted through the Goodfellows organization. Last year, the week-long show raised $12,000.

DIAMOND-STAR: *Sporty coupe for Plymouth*

By Christopher A. Sawyer
CRAIN NEWS SERVICE

The new Plymouth sports coupe to be built by the Chrysler-Mitsubishi joint venture, Diamond-Star Motors, will be introduced 15 months from now for about $9,400 for the base model.

Details of the new car were revealed to a focus group designed to test consumer reaction to the car. Auto enthusiast Dan DiZinno, who participated in the group, revealed details of the new car to AutoWeek, a car enthusiasts' magazine and sister publication of Automotive News.

Like many car buffs living near the General Motors proving grounds in Mesa, Ariz., DiZinno had always expected that the secret prototype he might some day reveal to the world would come from GM. Other sources also contributed to AutoWeek's detailed description of the Chrysler car, codenamed H24S.

The base car will be fitted with a single-overhead-cam 1.8-liter engine powering the front wheels.

Dan DiZinno

Diamond-Star's turbo 2 + 2 for Plymouth.

A top-of-the-line car will follow the base model by three or four months. That four-wheel-drive performance 2 + 2 will be priced below $16,500 in current dollars (some sources have put it as low as $15,950 in current dollars). Buyers will get a fully equipped sports coupe with full-time 4wd, powered by a 202-horsepower, 2-liter, double-overhead-cam intercooled turbo engine.

The H24S will have a wheelbase of 95 to 100 inches and will stretch less than 180 inches overall. Height will be just over 50 inches. Fully loaded, weight should run about 2,900 pounds. Performance is expected to be near the top of the sports-coupe

GM eyes new vehicle from abroad

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — General Motors is studying a plan to produce an all-new utility car/van in Brazil for distribution by its Pontiac Division in North America and by Adam Opel in Europe.

A preliminary development phase, including feasibility studies, has already been approved. A final decision from GM's board of directors is expected in February.

Opel, GM's West German passenger-car affiliate, is supervising engineering of the project. Preliminary body engineering work has been carried out by Usines Chausson SA, the French coachbuilder and body and process engineering specialist. Chausson is competing with Italy's Pininfarina for the main project body development work.

One source familiar with the program described it as a versatile concept, with 4x4 and 4x2 configurations and different versions. It has been separately described by a GM source as a vehicle of a type that does not currently exist. Final packaging and design have not necessarily been frozen into place, sources say.

Another GM source said the new product was conceived as a four-wheel-drive vehicle complementing the Chevrolet-Pontiac-Canada Group's forthcoming APV (All-Purpose Van).

The Pininfarina-designed, plastic-bodied APV, based on GM's A-body platform, was originally scheduled to receive a 4x4 variation about two years after introduction. However, insiders say the 4wd option was scrapped for cost reasons, and efforts turned to designing the new utility car/van as a 4wd model from the ground up.

The vehicle is intended for distribution in both North America and Europe. But the program was delayed for nearly a year while GM looked for a production source.

"The program will certainly be done in South America," said a source close to the project.

General Motors produces passenger cars and trucks at its GM do Brasil affiliate and exports some Brazilian-built trucks to the Middle East.

In a recent interview with Automotive News, GM Chairman Roger Smith said, "There ought to be export potential from Brazil.

"We've got to do something in Brazil," he said. "That's a super country. This whole thing has got to be more globalized than it's ever been before. We've got to spend more time looking at that."

'87 production off 5%

Cars down, trucks up in U.S., Canada

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

With only one week of work left this year, 1987 production of cars and trucks in the United States and Canada will total 12.60 million, almost 5 percent below the 13.24 million built last year.

Production results in the United States are mixed: Down 8.8 percent for cars, to 7.14 million; up 8.7 percent for trucks, to 3.85 million; and a combined total 3.4 percent below last year, at 10.99 million vehicles.

In Canada, estimated car output plummets 25.5 percent to 800,000 units but trucks outnumber cars for the first time at 810,000 units, a 2.4 percent gain from last year. Combined car-truck output for the year in Canada will turn up 13.6 percent short of last year, at 1.61 million units.

Combined output for the two

Optimistic outlook spices RV show

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

LOUISVILLE, Ky. — The National RV Trade Show drew 8,752 people, the largest crowd in recent years.

The attitudes and expectations of the attendees were generally upbeat as the industry appears to have shrugged off any perceptible impact from the stock market's dive in October.

Some manufacturers, though, continued to report disappointment in van conversion sales, which had been sluggish earlier in the year.

Meanwhile, many, like Starcraft and Winnebago,

NEWSPAPER

Chrysler hopes for 9.5 million, is ready for less

Market scenarios start at 8 million cars for '88

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Although Chrysler Corp. is projecting 9.5 million new-car sales in the United States in 1988, it has contingency plans for market scenarios as low as 8.0 million units.

"For the first year in history, we're doing scenarios," said Donald P. Hilty, corporate economist. "Economists are supposed to stick their necks out; that's what we get paid for . . . but this year we're just not that certain."

Chrysler's scenarios for calendar 1988 range from a high of 10.1 million cars and 5.0 million trucks to a low of 8.0 million cars and 3.5 million trucks.

Hilty said the working projection of 9.5 million cars and 4.7 million trucks is "cautiously optimistic," based on the belief that there are "long-term strengths in the industry based on operating costs, the need for cars and trucks and demographics."

"We're programming for 5 percent below trend," Hilty said.

Chrysler's doomsday scenario of 8.0 million cars and 3.5 million trucks, he said, is a "shock scenario" that could be caused by "an interest rate shock or an oil shock" to the economy.

"We don't think that's the most likely, but we're not unique," he said. "I think all companies are looking at scenarios. It's prudent."

Hilty: "New York City — and surrounding communities — appear to be the only soft spot."

Chrysler believes there will be real growth in gross national product next year, but its "average recession" scenario would peg vehicle sales at 9.0 million cars and 4.4 million trucks.

On the high side, Hilty said, sales of 10.1 million cars and 5.0 million trucks are possible if there is "a definite, believable" plan to reduce the federal budget deficit that will make the financial community comfortable.

"We're looking for signposts to tell us what scenario we're on," he said.

The high degreee of economic uncertainty has prompted Hilty to study a number of unusual indicators, including airline and hotel bookings for the year-end holiday period.

"Sun bookings — that is Florida, California, Arizona and Hawaii — are holding up," he said. "The only ones that seem to be a little soft are the ski holidays . . . and we think maybe those are the yuppies from New York."

Hilty said the key to sorting through the 16 various scenarios for 1988 is to remain flexible.

He said that Chrysler sees improvements in regional economies and markets, including the agricultural and "oil" regions.

"The New York City market — and the surrounding bedroom communities — appear to be the only soft spot," he said.

Car inventories rise; totals are 83 days for U.S., 61 for imports

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Stocks of new domestic and imported cars continued to climb in spite of improved sales in the last period of November and in spite of incentives launched by the Big 3 U.S.-based automakers.

On Dec. 1, combined imported and U.S.-built car stocks were 6.54 percent higher than on Nov. 1 and 13.95 percent fa'ter than a year ago.

Since Ford Motor Co. and Chrysler Motors reported higher sales in late November than in earlier periods, both automakers reduced the number of days in which they could sell off their stockpiles. General Motors' days' supply, however, continued to climb.

Higher inventories could be seen in stores that sell imported cars, especially those that sell German luxury cars. Import-car sales fell 5.83 percent last month, although the segment accounted for a third of the market in November.

December opened with a stockpile of 778,-720 imported cars and trucks, a 66-day supply, compared with 743,244 imported vehicles, a 58-day supply, on Nov. 1. The imported vehicle stockpile climbed 19.93 percent above 649,336 on Dec. 1, 1986.

Stocks break down to a 61-day supply of imported cars or 577,206 units and an 84-day supply of imported trucks, representing 201,514 units on Dec. 1.

The Dec. 1 stockpile of U.S.-built cars was the highest since July 1. There were 1,683,-501 domestically produced cars, an 83-day supply. That was 8.18 percent more than last month's 1,558,931 count, an 80-day supply and it was 10.14 percent higher than last year's Dec. 1 count of 1,531,295, a 71-day supply.

The average Dec. 1 days' supply of U.S.-built cars for 1982-86 was 63. For import cars, the average was 36 days.

A number of dealers claimed to be controlling inventories although several said cars were much harder to sell this year.

"We monitor our inventory on a weekly basis throughout the year. We're very conscious of carrying inventory; there are some areas where we see slowness," said Edward J. Butera, vice president and general sales manager, Warnock Holding Co., Livingston, N.J., which owns five dealerships that include all Big 3 makes. "We are still really short of a few Ford vehicles — the Mustang GTs in Ford stores and the and 4x4s with automatic transmissions," he said.

Jim Lupient, owner of Jim Lupient Oldsmobile, Golden Valley, Minn., said, "We're doing a little maneuvering. We have a 69-day supply with very little carryover on '87s. We've kept control this year because we knew what would happen after 1.9 (percent loans) ended."

Ex-dealer charges GM, Chevy blackballed him

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEWARK, N.J. — A former Chevrolet dealer has sued General Motors and its Chevrolet Motor Division alleging that the company refused his plan to purchase another dealership. He claimed GM effectively blackballed him in the industry, making it impossible for him either to purchase another GM outlet or to work in a management position for a GM dealership.

The dealer, Larry F. Tynan, is the former president of the Chevrolet Dealer Alliance, an activist group founded on the lines of the Ford Dealer Alliance approximately five years ago. Tynan was also president and owner of Towne Chevrolet in Middletown, N.J., until he sold the operation in 1985.

Tynan alleged in his complaint, filed in state court here, that an offer he made on a Chevrolet-Oldsmobile dealership was refused by Chevrolet because of his activities as president of the alliance and his vocal criticisms of Chevrolet during his tenure on various Chevrolet dealer councils, including the National Dealer Council.

In a letter to the selling dealership, J&B Chevrolet and Olds, Inc., of Belvidere, N.J., Chevrolet zone manager R.W. Emerick Jr. said that prior experience with Tynan, during his ownership of Towne Chevrolet, was a "mutually unsatisfactory experience."

During the period Tynan "incessantly expressed extreme dissatisfaction with Chevrolet and General Motors policies, personnel, products, strategies or anything else related to our business relationship," the letter said.

Tynan said in his complaints that GM and Chevrolet violated New Jersey franchise law. The refusal was not based on the reasons required under the statute, which relate to character, financial ability and business experience, he said.

Instead, he charged, he was being punished for "the exercise of his constitutional rights under the 14th Amendment of the U.S. Constitution and also under the New Jersey Constitution.

Tynan's complaint alleged that by virtue of the letter sent to J&B refusing to approve the offer, the company "put all General Motors dealers throughout the country on notice that to employ the plaintiff in a management position would invite sanctions."

The letter from Emerick said, "We therefore believe it is not in the best interest of Chevrolet, General Motors, or the consuming public to enter a dealer agreement with any company in which Mr. Tynan would exercise management of ownership."

Tynan, in a telephone interview with Automotive News, claimed this was the key sentence that effectively blackballed him.

Tynan also is suing to obtain a refund in parts supplied to warranty retail customers. Under New Jersey law, the reimbursement is at the prevailing retail rate. Tynan claimed he is owed $178,587 by the division.

Under New Jersey proceedings any monetary awards are assessed by the jury and are usually not included in the complaint.

A spokesman for Chevroletsaid the division had no immediate comment.

GM shuts Flint and Pontiac plants that opened in '20s

DETROIT — Two General Motors plants, both rich in history, closed their doors permanently last week.

The Chevrolet-Pontiac-Canada Group's assembly plant in Pontiac, Mich., closed after more than 60 years of producing vehicles.

Most recently, the Pontiac plant built GM's G-body cars — Buick Regal, including the hot-selling Regal Grand National; Oldsmobile Cutlass Supreme; and Chevrolet Monte Carlo. Those models are being phased out and replaced by newer, front-wheel-drive models.

The closing puts 1,700 hourly and 60 salaried employees on indefinite layoff.

At the same time, the assembly facility's companion body plant, the Buick-Oldsmobile-Cadillac Group Flint Body plant, in Flint, Mich., also closed. The closing of the Flint plant leaves 2,850 hourly and 250 salaried workers jobless.

The Pontiac plant opened in 1927 as part of Pontiac Motor Division. Car production was interrupted during World War II, when the plant made aerial torpedos and anti-aircraft guns.

The plant closed again in 1982 as Pontiac prepared for the production of the new Fiero in the nearby Fisher Body plant in the Pontiac complex and the just-opening Orion Township plant.

At that time, the closing was to be permanent. However, when larger rear-wheel-drive cars continued to be in demand, the plant was temporarily put back into service in 1984.

In June 1986, the plant turned out its 300,000th car since re-opening. In its 60-year history, the plant produced more than 10 million cars, branded with such names as Tempest, Chieftain, Star Chief, LeMans, Grand Prix and GTO.

The Flint plant was opened by William C. Durant in 1923. It marked his third attempt to build an auto empire after resigning as GM president in 1920. Durant's newly founded Flint Motor Car Co. was to build cars to compete against Buick. Durant's efforts failed, however, and he sold the plant in 1926 to the Fisher brothers, whose company had been partly owned by GM since 1919.

The plant was expanded so that for several decades it was the world's largest automobile body-making plant.

Throughout its history, the plant produced a number of body styles for GM products, mostly Buicks and including the Riviera, Special, LeSabre and Electra. During World War II, the plant produced tank parts and other defense materials and tooling for the war effort.

The plant also played a major role in the sit-down strike of 1936-37. The plant was home to a strong nucleus of union supporters who staged the 44-day sit-down strike that began late December 1936.

Since 1948, the plant made more than 10 million car bodies.

Light trucks extend string of records

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Light trucks continued to set sales records in November and the first 11 months of the year.

Among the month's highlights:

- Domestic manufacturers, aided by a weak dollar and more-competitive prices, picked up 7 percentage points of market share.
- Most importers, excluding Nissan and Suzuki, were off from year-ago levels.
- Suzuki, however, continued a slide dating back to last summer.
- Full-sized pickups were a major driving force behind big sales gains for Ford and General Motors.

November sales of 356,300 light-duty trucks were up 11.79 percent over the previous November high of 318,727 in 1986.

For 11 months, record industry sales of 4,282,988 units topped last year's previous high of 4,190,794 by 2.20 percent.

Domestic manufacturers captured 84.01 percent of the light-truck market in November, up from 77.04 percent last year.

Calendar year-to-date, domestics had an 81.21 percent share of the market, up from 79.72 percent in 1986.

Ford led the domestic industry's gains.

Its sales of 115,013 light trucks in November were up 37.22 percent from a year earlier.

For 11 months, Ford sales of 1,286,884 light trucks were up 6.52 percent from last year.

Chevrolet also had a respectable 19.25 percent gain in November on sales of 87,075 light-duty vehicles.

Year-to-date, Chevrolet sales of 1,075,902 units still trail last year's by 5.24 percent.

Big pickups, as a segment, have been declining steadily over the past few years. But in November, Ford retailed 49,170 full-sized F-series models, up 66.28 percent over a year ago. Chevrolet retailed 32,830 of its full-sized C/K units for a 28.28 percent sales gain.

GMC's 8,911 Sierra sales were up 29.73 percent, while Dodge's 8,172 full-sized D/W series sales had a more moderate 6.85 percent gain.

Chrysler retailed 54,772 trucks in November, up 4.59 percent from a year ago. That compared to a 22.25 percent gain on sales of 649,122 trucks for the 11-month period.

GMC's 23,013 sales were up 25.93 percent in the month. For 11 months, GMC's 279,603 light-duty sales were slightly behind 280,452 a year ago.

Jeep managed a 7.62 percent sales gain in November. For 11 months, Jeep was a shade ahead of year ago: 186,771 compared to 186,165.

The imports have been hard hit in the price-sensitive small pickup market.

Toyota retailed 18,546 trucks in November, off 38.11 percent from a year ago. For 11 months, Toyota sales of 278,780 trucks were off 20.11 percent.

Nissan managed a small gain on sales of 16,008 trucks in November, up from 15,425 in like 1986. For 11 months, its 201,121 sales were slightly below 203,031 a year earlier.

Mazda, Isuzu and Mitsubishi were all off last month. Mitsubishi still had a large 52.77 gain for the 11-month period.

Suzuki retailed 5,082 Samurais in November, off from 5,916 in October, 6,077 in September and 7,905 in August.

Freightliner offers plan to cut fleet cost

PORTLAND, Ore. — Freightliner has introduced a Fleet Assistant software computer program to help fleet managers improve the efficiency and cut the life-cycle costs of their vehicles and equipment.

Fleet Assistant is a modular program with a number of options. The base unit focuses on vehicle lifetime costs and controls.

Other modules, which can be added as needed, can log work to be done, generate repair orders, inventory parts, create purchase orders, log mechanics' time and produce invoices.

Fleet Assistant's key functions include:

- Tracking and scheduling preventive maintenance.
- Detecting common problems to head off potential downtime.
- Tracking the lifetime cost of each vehicle in incremental mileage intervals or time periods.
- Monitoring the lifetime costs of groups of trucks, trailers or reefers.
- Identifying vehicles with poor mileage and high maintenance costs to help project replacement dates.
- Generating reports for state taxes, vehicle specifications, schedules, insurance and other financial requirements, using standard computer codes or any system a fleet manager might designate.

Freightliner Software is marketing the program with a complete support package, including regional training classes.

GMC offers easy ordering for Hot Shots

LAS VEGAS, Nev. — GMC Truck is offering a simplified ordering program for Hot Shot medium-duty trucks.

Those low-frame-height medium-duty trucks are used for hauling light but bulky products that require more cubic space than gross vehicle weight.

A Hot Shot truck is a tractor with a high-horsepower diesel engine and small-diameter tires that create overall low frame height.

The low frame height, about 34 inches, allows the mounting of a low-profile fifth wheel with a flatbed trailer that is 42 inches high.

The 42-inch height permits 10-foot-high loads on all portions of the trailer, while staying within the legally mandated 13½-foot maximum overall height.

Hot Shots are used to carry light and stackable items and can also be used as wreckers, ambulances, tank container vehicles, portable satellite dish vehicles and rollback flatcar carriers.

GMC offers specialized option content and vehicle refinements to meet customer requirements in its E-Z Spec ordering procedure.

Hot Shot specifications available on GMC medium-duty vehicles feature a high-horsepower Detroit Diesel 8.2-liter engine, five- and six-speed transmissions, single or two-speed rear axles, a 32,000-pound gross combination weight rating, GVW ratings up to 22,000 pounds and small-diameter tires that give the chassis an overall low frame height of approximately 34 inches.

Allison Transmission now a separate GM division

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

As a prelude to officially starting its new Detroit Diesel Corp. joint venture with Penske Corp. in January, General Motors has set up Allison Transmission as a separate division.

A Detroit Diesel Allison spokesperson said government approval for Detroit Diesel Corp. to begin operating is anticipated within a week or so. Detroit Diesel Corp. will produce and market GM's medium-duty and heavy-duty diesel engines for trucks and commercial use. The 6.2-liter and 8.2-liter diesels will stay with Allison.

The new Allison Transmission Division will handle design, manufacturing and sales of all medium-duty and heavy-duty automatic transmissions within GM, including the new state-of-the-art heavy-duty World Transmission scheduled for introduction in the 1991 model year.

The new division is headquartered in Indianapolis and becomes part of GM's automotive components groups.

It reports to John D. Debbink, GM vice president and group executive of the chassis and transmission components group.

In making the announcement, Robert C. Stempel, GM president, said, "Creation of this new division to handle all current and future medium- and heavy-duty transmissions will further strengthen the automotive components groups' competitive position in the worldwide market."

GM is the leader in the world market for automatic transmissions for medium-duty and heavy-duty commercial and military vehicles.

It sold a record 71,000 fully automatic transmissions for commercial vehicles during the 1987 model year, up from a previous high of 69,900 in the 1985 model year, according to an Allison Transmission spokesman.

In total, it sold 79,300 medium- and heavy duty automatic transmissions for commercial and military vehicles worldwide during the 1987 model year, accounting for 78 percent of the world market for such transmissions, according to GM.

Robert M. Clark has been named general manager of the newly formed Allison Transmission Division.

He formerly was general manager of the Rochester Products Division. He has been with GM 31 years.

James F. Ault replaced Clark as general manager at Rochester Products.

Ault has been general manager of Delco Remy Division.

Homi K. Patel is the new general manager of Delco Remy, succeeding Ault.

He formerly was director of the steering systems business unit of GM's Saginaw Division.

In confirming Allison's planned introduction of its new World Transmission in 1991, Stempel said the transmission was engineered around a new GM-patented gear and clutch system and closed-loop electronics.

When Allison was developing the World Transmission, it surveyed major original-equipment manufacturers and customers in Europe, Japan and North America to ensure it was designed to their specific requirements, Stempel said.

The World Transmission can be programmed to provide either four, five or six forward speeds.

Its highly advanced electronics also feature diagnostic capability that will greatly simplify service procedures, according to Stempel.

It will replace Allison's current line of AT, MT and HT automatic 4-speed and 5-speed transmissions, which have had record sales the past two years, an Allison Transmission Division spokesman confirmed.

Deere reports profit for quarter

MOLINE, Ill. — Deere & Co. reported net income of $32.6 million in the fourth quarter of its fiscal 1987 year ended Oct. 31, compared with a net loss of $139.7 million in last year's strike-affected final quarter.

Fourth-quarter 1987 income included $39.9 million of income tax benefits resulting mainly from tax loss carryforwards.

For the full year, Deere had a net loss of $99 million or $1.46 per share, compared with a net loss of $229 million or $3.33 per share in fiscal 1986.

Deere Chairman Robert A. Hanson said that while a number of important agricultural indicators improved during the year, he was still cautious because of uncertainties in the market outlook.

Deere's initial worldwide production schedules for 1988 will be about 20 percent higher than actual 1987 output, which was affected by three months of the work stoppage.

Most of the increase is scheduled for the first half of the year.

Deere's North American agricultural and industrial equipment production schedules are up significantly over last year.

Overseas production is scheduled to be slightly higher.

However, Deere still will be operating far below maximum capacity, Hanson added.

AUCTION DATES

American Motors

Dec. 15 — D-A Auto Auction, New Stanton, Pa.

Dec. 16 — Newburgh Auto Auction, Newburgh, N.Y.

Ford Motor Co.

Dec. 15 — South Seattle Auto Auction, Kent, Wash., and Harrisonburg Auto Auction, Harrisonburg, Va.

Dec. 16 — Atlanta Auto Auction, Red Oak, Ga.; Columbus Fair Auto Auction, Obetz, Ohio; Concord Auto Auction, Acton, Mass.; Clanton's Auto Auction, Darlington, S.C.; Lakeland Auto Auction, Lakeland, Fla.; and Southern California Auto Auction, Fontana, Calif.

Dec. 17 — Greater Chicago Auto Auction, Chicago; Aptco Auto Auction, Taylor, Mich.; Houston Predelivery Center, Houston; 166 Auto Auction, Springfield, Mo.; St. Louis Auto Auction, Bridgeton, Mo.

AUCTION BRIEFS

A $1 million auto reconditioning center opened recently at the **Nashville Auto Auction**, Nashville, Tenn. It is capable of reconditioning 7,500 vehicles a week.

Staffed by 40 reconditioning specialists, the 12,200-square-foot facility is on the auction's 116-acre property at 1450 Lebanon.

The auction holds consignment sales in addition to factory sales by General Motors, Ford Motor Co., Ford Motor Credit and Nissan. It has five selling lanes, courtesy transportation, vehicle transport services and body and mechanical repair shops.

A heavy-truck auction is slated for Jan. 15 at the **Dallas Auto Auction**, a subsidiary of Anglo American Auto Auctions. Subsequent heavy-truck auctions are planned for other Anglo auctions in Kansas City, Mo.; Baltimore; Nashville, Tenn.; and Chicago.

Anglo acquired the Fort Wayne (Ind.) Vehicle Auction and Southern States Vehicle Auction, Atlanta, in July. The auctions specialize in the sale of heavy trucks.

The company plans to develop separate heavy-truck sales facilities in several of its auctions around the country.

GM, Motorola join forces on auto controls

KOKOMO, Ind. — General Motors' Delco Electronics Corp. and Motorola have signed a technical agreement to develop power-integrated circuits for smarter and more precise controls in cars.

Delco and Motorola's discrete and special technologies group will pool their technologies to achieve a shorter design cycle time.

The companies expect to speed up research on merging microprocessors and power controls for a single silicon chip, according to Gene Ori, general manager of Motorola's discrete group.

The initial device being developed is a custom chip for an anti-lock braking system.

Products developed under the joint agreement should result in more efficient and cost effective controls for motors, actuators and lighting systems, said Donald J. Almquist, general manager of Delco Electronics.

Goodyear moves account from JWT to Y&R

CHICAGO — Goodyear Tire & Rubber Co. has moved its $25 million U.S. tire advertising account from J. Walter Thompson's New York office to Young and Rubicam.

JWT's Detroit office is keeping Goodyear's $10 million Motorsports account, including Eagle high-performance tires and Goodyear's racing events.

STOCKS

FROM PAGE 3

Seven of the eight U.S. carmakers reported fatter inventories than on Nov. 1.

Ford Motor Co.'s stocks moved up 6.02 percent above last month's levels. However, Ford has had tight inventories most of this year. Larger stocks were needed to meet increased demand. Ford began December with an optimal 65-day supply, which was shorter than its 72 days' worth of cars on Nov. 1. Last year, Ford carried a 58-day supply Dec. 1.

General Motors' stocks were equal to a 101-day supply on Dec. 1, compared to a 90-day supply on Nov. 1. GM had 17 models with inventories representing more than 100 selling days. Chevrolet Nova stocks climbed to a 222-day supply vs. 147 days on Nov. 1.

Although Chrysler Motors' inventories were up 11.94 percent from Nov. 1, the company began December with a 93-day supply vs. 97 days' worth on Nov. 1. Last year Chrysler had a 75-day supply on Dec. 1. Horizon/Omni stocks were reduced to 32- and 40-day supplies compared to 56 and 55, respectively on Nov. 1. November sales were strengthened by New Yorker and LeBaron J, and that helped reduce the corporate days' supple.

Honda began December with the leanest days-supply numbers. Though stocks were nearly a third larger than on Nov. 1, Honda had a slim 13-day supply of U.S.-built cars. Its higher-end imported Acura line inventories remained steady at 22 days' worth, and Honda began the month with a 14-day supply of imported Civics and Accords.

Nissan's U.S.-built-car inventories increased. The Japanese carmaker began December with a 59-day supply vs. 40 days' worth of domestically produced cars a month ago. Its import-car supply was 97 days for a combined car stock of 85 days, and its truck supply was up to 116 days.

Companies shared the Dec. 1 domestic inventory as follows: GM, 56.47 percent; Ford, 24.18 percent; Chrysler, 16.73 percent; Volkswagen, 1.02 percent; Honda, 0.81 percent; Toyota, 0.44 percent; Nissan, 0.29 percent; and Mazda, 0.06 percent.

On Nov. 1, the shares were: GM, 54.88 percent; Ford, 24.57 percent; Chrysler, 17.81 percent; Volkswagen, 0.88 percent; Nissan, 0.77 percent; Honda, 0.64 percent; Toyota, 0.45 percent.

By market class, intermediate-car inventories were the heaviest, and represented a 98-day supply while the subcompact market class was the slimmest and represented a 54-day supply on Dec. 1.

The 61-day supply of import cars compares with a 56-day supply on Nov. 1 and a 41-day supply on Dec. 1, 1986. Inventories were nearly 20 percent above stocks a year ago.

Import-truck inventories were up to 201,514 units, an 84-day supply, compared with 177,501, a 66-day supply on Nov. 1. Last year on Dec. 1, truck inventories represented a 56-day supply.

Inventories of Audi, Merkur and Porsche were inflated; each had more than 100 days' worth of cars in stock on Dec. 1. West Germany's share of the import stockpile on Dec. 1 rose 3.03 percentage points from Nov. 1.

Import-car inventories were divided as follows on Dec. 1: Japan, 67.57 percent; West Germany, 14.70 percent; other countries, 17.73 percent. Last month, Japan had 71.95 percent; West Germany, 11.67 percent and other countries, 16.38 percent.

Isuzu, Mitsubishi and Chevrolet's import-car supplies stood at over 100 days' worth even though Chevrolet's import-car days' supply was lower than a month ago.

PRODUCTION

Nov. car output dips

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production last month totaled 583,503, the lowest for November since 1982 when 404,542 cars were built.

Last month's ouput dipped 13.13 percent from October's 671,681 and was slightly below (0.72 percent) the year-ago month's 587,724.

Last week's targeted auto output of 149,727 declined 2.72 percent from the prior week's 153,907 and was 17.70 percent below the year-ago week's 181,921.

So far this year, 6,817,705 cars have been assembled, 8.94 percent below the 7,487,135 completed last year at this point.

Companies split last week's scheduled build as follows: General Motors, 46.22 percent; Ford Motor Co., 26.65 percent; Chrysler Motors, 17.77 percent; Honda of America Manufacturing Inc., 4.63 percent; New United Motor Manufacturing Inc., 2.17 percent; Volkswagen of America, 1.34 percent; Nissan Motor Manufacturing Co. U.S.A., 0.89 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.33 percent.

GM permanently closed its Pontiac, Mich., (No. 8) plant and its companion Flint body assembly plant last week. The shutdown of the two facilities affects about 4,700 workers.

Overtime was scheduled last Saturday at Ford's Wixom, Mich.; Wayne, Mich.; and Kansas City, Mo., plants.

Ford slated daily overtime at all of its car plants this week.

Chrylser's St. Louis (No. 2) and Belvidere, Ill., plants were scheduled for overtime last Saturday. Both plants are also slated for daily overtime this week.

Truck build best since '78

November's domestic truck output of 314,808 was the highest for that month since 1978, when 339,721 were built.

Last month's production was 14.78 percent below October's 369,408 but 28.83 percent above the year-ago month's 244,357.

The total for November 1986 was affected by a strike at Delco Electronics Corp. that trimmed production at General Motors truck plants.

Last week's scheduled output of 85,550 was 0.64 percent more than the previous week's 85,007 and 4.74 percent more than the year-ago week's 81,679.

Year-to-date, 3,673,498 trucks have been built, 8.78 percent more than the 3,376,911 completed last year at this time.

Overtime was slated last Saturday at Ford Motor Co.'s Wayne, Mich.; Lorain, Ohio; and St. Louis plants.

Daily overtime is scheduled this week at all Ford truck plants.

Car output rises in Canada

Canadian car output during November totaled 90,338 units, 16.04 percent more than October's 77,851 but 7.65 percent below the year-ago month's 97,817.

Last week's estimated output of 22,584 cars was 11.61 percent more than the previous week's 20,234 but 10.32 percent below the year-ago week's 25,183.

So far this year, 767,014 cars have been assembled, 24.94 percent below the 1,021,928 completed last year at this point.

Truck production for November totaled 73,755 units, 3.45 percent below the October output of 76,390 but 49.77 percent more than the year-ago month's 49,246.

Scheduled output of 19,042 trucks last week was 4.29 percent more than the prior week's 18,259 and 35.73 percent more than the year-ago week's 14,029.

Year-to-date, 787,441 units have been built, 4.85 percent more than the 751,019 assembled last year at this time.

ROUNDUP

FROM PAGE 1

countries will show a shortfall of 10.8 percent for cars at 7.94 million and a gain of 7.5 percent for trucks at 4.66 million units. The car-truck total will be off 4.8 percent at 12.6 million units.

The U.S. car total will be the lowest since 1983, when 7.11 million were built. The loss this year came from General Motors and Chrysler, both down about 16 percent. The numerical decline was greater for GM.

Throughout the year, GM closed 13 car plants at various times to reduce inventories, and several plants were shut down more than once.

GM also cut line speeds and shifts during the year at seven plants due to sluggish sales and scheduled very little overtime.

It also permanently shuttered four plants this year: Framingham, Mass.; Norwood, Ohio; Pontiac, Mich. (No. 8); and Clark Avenue in Detroit.

Chrysler Motors' year-end car production will fall about 16 percent short of last year's combined Chrysler-American Motors production figure.

Part of the problem was a temporary production halt of Omni/Horizon, Fifth Avenue, Diplomat and Gran Fury models as Chrysler shifted production to the former AMC plant in Kenosha, Wis.

Chrysler also lost production when it closed its St. Louis (No. 2) plant for two weeks for inventory adjustment and its Bramalea, Ontario, plant for several weeks due to quality problems.

On the other hand, Ford Motor Co.'s calendar-year car output should increase by about 4 percent.

There were no Ford plants closed during the year, except for model changeover, of course, and although Ford's Saturday overtime schedule did not match last year's, it scheduled daily overtime for most car plants all year round.

Honda of America Manufacturing will end the calendar year about 90,000 units ahead of 1986, a gain of 39 percent, reflecting the addition of a second line at its Marysville, Ohio, plant, late in 1986 and this year's opening of a plant in Alliston, Ontario.

Volkswagen of America's output is slated to decrease 21 percent despite the addition of a Jetta line to its Westmoreland, Pa., plant late in 1986. VWoA plans to close its U.S. plant in 1988 because of slow sales.

Nissan Motor Manufacturing Co. U.S.A. will end the year an estimated 50,000 units, or 88 percent, ahead of 1986 when the plant was closed for several months for model changeover. The increase also reflects the addition of the four-door Sentra to its Smyrna, Tenn., plant late in 1986.

New United Motor Manufacturing Inc., the GM-Toyota joint venture, is scheduled to trail its 1986 total slightly despite the addition of the Toyota Corolla FX model to Chevrolet Nova production late last year at its Fremont, Calif., plant.

A newcomer to the U.S. market this year was Mazda Motor Manufacturing (U.S.A.). The new plant in Flat Rock, Mich., will assemble about 4,500 cars in 1987.

ITT Automotive buys site for headquarters

BLOOMFIELD HILLS, Mich. — ITT Automotive has purchased a 35-acre site in nearby Auburn Hills for a new engineering center and world headquarters.

GM dealers buy stock, seek clout

Detroiters kick off message to board

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER
Copyright, 1987, Automotive News

DETROIT — Some Detroit-area General Motors dealers are purchasing 1,000-share blocks of GM stock, hoping to create a national wave that will give dealers more influence in the boardroom of the giant automaker.

"I personally know of at least 100 dealers across the country who already have bought stock," said Michael Rinke, Rinke Pontiac-GMC, Warren, Mich. "We bought ours."

At the regular December meeting of the 18-member Detroit-area Tri-County Pontiac Dealers Association, the 16 members present voted unanimously to recommend "the concept of General Motors dealers buying General Motors stock," according to an association statement.

The statement, issued by association president Robert S. Sellers in response to Automotive News inquiries, said, "The dealers are confident in the future of General Motors and that a GM stock purchase represents good value."

The statement also said the dealers believe that if every GM dealer nationally owned an average of 1,000 shares, it would launch "a new era of dealer-factory relations" and reaffirm the "historic partnership" between GM and its dealers, which the group called "the finest relationship in the industry."

Sellers declined to elaborate.

But despite the upbeat language of the association, a primary impetus for the stock purchases, at least as described by some dealers, is the specific goal of winning

Vigil at Cadillac
Workers at the Buick-Oldsmobile-Cadillac Group's Clark Avenue plant in southwest Detroit, which closed last week, marked the event Thursday with a candlelight vigil in front of Cadillac headquarters there. UAW Local 22, which represents the plant's workers, said, "The vigil is to show the American public our concern and utter outrage at the loss of jobs and the hardships a community suffers when plants are closed." Clark Avenue's sister plant, Fleetwood body, also was closed last week. Cadillacs had been built at Clark Avenue since 1923. **Story on Page 6.**

PORSCHE: *Chairman Schutz quits, victim of automaker's falling U.S. sales*

By Leon Mandel and Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTERS

STUTTGART, West Germany — Last Tuesday night, automotive dignitaries from around the world gathered for the annual gilt-edged European and American Porsche Cup gala — an elaborate celebration of the coveted marque's racing achievement in 1987.

But while the evening's entertainment — a magician — made things disappear, many speculated about the most noticeable sleight-of-hand of all: That Porsche Chairman Peter Schutz was inexplicably missing, as he had been the night before from a dinner for his North American visitors.

Instead, before a crowd of 1,000 sequined and glittering guests sat Dr. Ferry Porsche, not with Schutz as he had in past years, but with board members Heinz Branitzki, Hans Halbach, Rudi Noppen and Helmuth Bott.

Everything was explained the next afternoon.

Schutz, after months of frustration, had resigned at the behest of the Porsche heirs who control the company. Only a month before, the architect of Porsche's surge in the U.S. market during the 1980s, had said of his job: "In a corporate culture filled with firefighters, I am the arsonist" — a reference to the discord.

Ironically, the same American market that made Schutz's star rise also brought it down. The 57-year-old German-born American was seen as a victim of the company's heavy dependence on the United States at a time when the dollar has fallen to record lows against the German mark. With more than 60 percent of production shipped to America, Porsche is reeling from lower sales and profits and has been a rumored takeover candidate of late.

Schutz will be replaced at the end of this year by Branitzki, 58, the company's deputy chief executive and chief financial officer. However, Branitzki, a member of the Porsche board for the past 15 years, is widely viewed as a temporary successor.

No sharp redirection of company policy is expected. Porsche already has cut production and instituted shorter shifts in response to the de-

GM leads holiday blitz to sell '87s

AUTOMOTIVE NEWS STAFF REPORTERS

Domestic and imported automakers are taking on Santa Claus in a holiday sales drive to clean out their 1987 models and to build momentum for 1988.

General Motors is planning to launch a major advertising campaign between Christmas and News Year's Day to promote incentives and value packages offered by all five of its car divisions.

Both of GM's domestic competitors will begin major promotions the week following Christmas. Chrysler Motors will launch its new Jeep-Eagle franchise and Ford will introduce its redesigned Lincoln Continental on Dec. 26.

Meanwhile, Chrysler Motors last week expanded its consumer program offering low-interest loans and rebates.

Chevrolet likewise expanded its dealer incentives. Cadillac announced a double-pronged incentive. A number of importers are also offering incentives to dealers and their sales staffs to clean out 1987 inventories. Among them are Alfa Romeo, Mazda, Mercedes-Benz, Saab, Suzuki and Toyota.

John G. Middlebrook, GM vice president in charge of marketing and product planning, said the Christmastime campaign, centered on television, will bring all the retail promotions "under one GM umbrella."

Middlebrook said no increases in option-package discounts or rebates are planned in connection with the promotion, nor is cut-rate financing — which was offered as an alternative to rebates in the 1987 model year.

GM sources said each division can decide which cars to promote and dealers have an option to tie in.

Peugeot Motors of America also is planning a holiday advertising activity. The French importer is sending greeting cards to 50,000 Peugeot owners. The card, designed by Peugeot's advertising agency HDM, New York, shows children's toys on its front, along with a Peugeot 505 Turbo and eight-passenger wagon.

The greeting reads, "Santa isn't the only one who has been busy this year. Come and see our

U.S.-Brazil fight may curb VW Fox

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — White House trade advisers are seriously contemplating a restriction on Volkswagen importing Fox automobiles from Brazil, in retaliation for Brazilian barriers to U.S. computer exports.

One of the proposals under consideration is a 100 percent tariff on each Fox model.

Volkswagen of America, the American International Automobile Dealers Association and the National Automobile Dealers Association are arguing, however, that such a move could force hundreds of Volkswagen dealers in the United States out of business.

The U.S. departments of state, labor and

Do not open until Dec. 26

Santa got a head start on his own season by driving a 1988 Lincoln Continental off the line at Ford Motor Co.'s assembly plant in Wixom, Mich. The new front-wheel-drive Continental is priced from $26,078 and goes on sale Dec. 26. Ford hopes the date retains its magic for the company: Taurus and Sable went on sale Dec. 26, 1985.

Chrysler strives for 'slickness'

Better ride and handling, less noise and vibration are goals

By Arthur Flax and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

HIGHLAND PARK, Mich. — Chrysler Motors is accelerating its efforts to improve the sound, feel and ergonomics of its cars.

"There is a huge undertaking going on around here," said Robert Sinclair, Chrysler Motors engineering vice president. "Hal (Harold K. Sperlich, Chrysler Motors president) would call it the 'slickness' program. . . . It involves refinement of ride, handling, elimination of noise, vibration and harshness."

Chrysler always has been concerned about vehicle refinement. The refinement program, however, has accelerated in the last year as a result of competitive pressures from Japanese manufacturers, particularly Honda.

A major auto enthusiast magazine recently rated five Honda cars (Acura Legend and Integra and Honda Accord, Civic and CRX) among the 10 best cars in the world.

"Do you think we pay attention? Of course, because the customers are paying attention and Honda is delivering," Sinclair said.

"The time frame for our program is as fast as possible," he said. "There are chapters of it in the 1989 models, 1990, 1991. As fast as we can roll it out. Expensive? You bet. It's a big part of the total forward spending plan."

Chrysler's slickness program aims to make the "feel" or "seat-of-the-pants" impressions of Chrysler Motors automobiles more pleasurable to customers. Components such as gearshift mechanisms, lighting and climate controls will be evaluated and refined across the product line. Sinclair said some component suppliers are going to change.

"Sound, feel, ergonomics. Is the switch where I want it to be? Is it easy to operate? Does it sound right? How controls feel in relation to the human operator is all part of it," he said.

The development of Chrysler's five-speed manual gearbox is an example of the efforts of the slickness program.

"If you want to fault Chrysler's five-speed-manual shift quality, fault the hell out of it," Sinclair said. "I fault the hell out of it. I was involved in making about 55 changes in it. Next year it will be better, I guarantee you.

"The year after that, we think we will finally have done what we should have done in the first place because we will put a three-plane shifter in place and finally it will be a pleasure to operate. It hasn't been. And that's our fault. It has not been what the customer deserves, and I'm sorry it has taken so long."

Sinclair, who plans to retire Feb. 1, noted that engineering always involves a tradeoff between product cycle time frames, the amount of development money available, price and the value goals for the vehicles.

"Take the LeBaron J coupe for example," he said. "Beautiful car. Why do we have a four-banger in there? Because we couldn't afford to get the V-6 and four-speed electronic transmission in when it went into production in St. Louis.

"Will the LeBaron get a V-6 by 1989? That's a reach. We beat each other up every day. Can you do it faster? We work across a stable of vehicles and can't do everything at once," he added.

The customer has a right to demand "motoring pleasure," Sinclair said.

"The car should be a pleasure to look at," he said. "It should have superb fit and finish. It ought to run smoothly and quietly. It should be a pleasure to operate. You don't want to search to turn the radio up. You don't want buzzes, squeaks or rattles. All of that is what we are trying to eliminate."

As with General Motors' Mona Lisa product-comparison program that led to the GM-10 cars, and Ford's 400 best-in-class comparison program that was used in the development of the Taurus/Sable, Chrysler is disassembling competitive models to analyze and compare the products with Chrysler vehicles, Sinclair said.

Sam's in car business in 7 states with 15 dealers

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Sam's Wholesale Clubs has bowed out of the car business in Arkansas and Texas but will continue to refer its members to dealers in seven other states for a standard $100 fee on each discounted car sold.

Those states are Florida, Alabama, Colorado, Kansas, Missouri, North Carolina and South Carolina. Outlets in Tennessee are considering the plan.

Sam's, the wholesale division of Wal-Mart Stores Inc., notified the Arkansas Motor Vehicle Commission recently that it had rescinded agreements with participating auto dealers to sell cars to Sam's club members at $100 over invoice (Automotive News, Nov. 9).

"The state asked us to do it and we are cooperating," said Bill Campbell, company planning director.

Sam's came under fire from the state and the Arkansas Automobile Dealers Association after launching a system in which club members paid $100 over dealer invoice for new cars. The fee was supposed to be returned to Sam's. Members first obtain approval from Sam's then make purchases from dealers recruited by the company.

In exchange, Sam's advertises the program in its outlets.

"It is up to the local (Sam's) managers to make agreements with dealerships," said Campbell.

Managers are urged to recruit dealers who will not restrict the types of vehicles sold.

Sam's operates 84 outlets in 19 states. About 15 dealers in seven states participate, he said.

Campbell declined to say how many cars have been sold but said the system has been generally well-received by Sam's members.

According to Campbell, the program's intent was to ease costs to owners of small businesses that do not qualify for fleet rates. He said 60 percent of Sam's sales are to businesses that buy goods for resale.

Both Texas and Arkansas told Sam's the system could violate state brokering laws. But in Florida, dealers are embracing the program.

"We've had a few calls from dealers but no problems," said David D. Jeffries, Florida Automobile Dealers Association executive vice president. "It's strictly a referral service. Sam's is paid a bird-dog fee."

Dodge World in Kissimee, Fla., has received some inquiries from Sam's members but hasn't sold any vehicles yet. "It's hard to judge how well the system will do because it just started here," said manager Tom Palme.

In Arkansas, one dealer said he will continue to offer discounted cars to customers, even though Sam's has left the business.

"The only reason the commission attacked us was pressure from the non-participating car dealers," said Bill Schwyhart, president of Hart Motor Co. in Rogers.

Chrysler settles odometer-fraud lawsuit

By Jack Bernstein
SPECIAL CORRESPONDENT

ST. LOUIS — Chrysler Corp. last week pleaded no contest to criminal charges of odometer fraud and agreed to pay at least $16.4 million to plaintiffs in related civil suits.

U.S. District Court Judge John F. Nangle has scheduled a sentencing hearing Feb. 19. At that time, Nangle could impose fines of up to $120 million.

As part of the plea bargaining agreement announced last week, the federal government dropped criminal charges against two Chrysler executives, Frank J. O'Reilly and Allen F. Scudder, who has since retired.

The criminal case stems from a federal grand jury indictment in June that charged Chrysler and the two executives with odometer tampering.

The company has maintained it acted legally, and initially pleaded innocent to the charges but admitted making a mistake in failing to notify customers that vehicle odometers were disconnected during overnight quality testing programs.

The company now tests vehicles with odometers connected and places a notice of test mileage in tested vehicles.

"We have already said that testing of cars with odometers disconnected was stupid," the company said in explaining its decision to enter a no-contest plea. "It makes no sense to go to trial to defend that practice."

As part of the separate civil settlement also announced last week, owners of 32,750 Chrysler, Plymouth and Dodge vehicles identified as tested vehicles will be awarded $500 each. That settlement is expected to total $16.4 million.

If additional vehicles are identified, Chrysler will be required to increase the restitution fund to guarantee a $500 payment to each affected owner. The company had said following the indictment that an estimated 60,000 1985 and 1986 models may be affected.

In addition, the company said that affected owners will receive extended warranties.

Missouri Attorney General William L. Webster, who acted as lead negotiator for the National Association of Attorneys General in reaching the civil settlement, said last week the extended warranties are expected to cost the company an additional $9.8 million.

Forty-five states, the District of Columbia, Puerto Rico and Guam joined the settlement. The Kentucky attorney general, however, indicated that he will pursue a civil suit against Chrysler despite the settlement.

Also last week, Nangle agreed to take jurisdiction of 13 private class-action suits filed across the country.

The federal indictment followed an investigation that began when Missouri Highway Patrol officers stopped Chrysler employees for speeding near the Fenton, Mo., assembly plant. The officers discovered that the odometers were disconnected on the newly assembled cars.

Majerus dies at 63; held No. 2 post in UAW

MILWAUKEE — Raymond E. Majerus, 63, UAW secretary-treasurer since 1980 and head of the union's aerospace, Dana and Champion Spark Plug departments, died Dec. 16.

Majerus, the UAW's second ranking officer, directed negotiations that resulted in new agreements this year at Rockwell Aerospace, Martin Marietta and Bell Helicopter.

He headed the union's American Motors department until October 1986, when heavy collective bargaining schedules in the aerospace department prompted him to request reassignment of his AMC duties.

Before becoming secretary-treasurer, Majerus was director of UAW Region 10 for eight years. The region comprises Wisconsin, Minnesota, North Dakota, South Dakota, Montana and Wyoming.

Born in Campbellsport, Wis., Majerus started working at Kohler enamel shop in Kohler, Wis., after being discharged from the U.S. Army following World War II.

Active in the Kohler Workers Association, an independent union, he led a wildcat strike in 1952 and was fired along with 11 others. He subsequently led a movement within the Kohler union to merge with the UAW.

When the UAW reached its first contract with Kohler, a provision barred Majerus from entering the plant. He worked as an organizer outside the plant in 1954 and was a key figure in the strike that began in April of that year and lasted until Sept. 1, 1960.

Legal disputes resulting from the strike lasted another five years. The strikers were ultimately reinstated with full back pay.

Harold A. Poling, vice chairman and chief operating officer of Ford Motor Co., said last week, "Ray Majerus devoted his life to the ideals and principles of the UAW. He worked diligently on behalf of the many men and women he represented, and he played an important role in the labor history of this country.

"The automotive and aerospace industries will miss his conviction, frankness and friendship."

Raymond E. Majerus

SALES GIANTS

FROM PAGE 1

franchises based on unit sales, and follows the earlier, similar ranking of 10 best-selling franchises for each of the 10 traditional domestic franchises (Automotive News, Aug. 31).

The single largest import franchise was Longo Toyota, El Monte, Calif., which reported 14,334 retail sales and 4,000 fleet sales for a pack-leading new vehicle delivery total of 18,334.

Longo Toyota, of course, is now part of the Roger Penske organization, which also owns other large dealerships including the former Potamkin Cadillac franchise in Manhattan and another big-selling store in Downey, Calif.

Longo's primary and overwhelming dependence on retail deliveries was typical. Only 60 of the 190 Import Sales Giants had any fleet sales at all last year, and most were negligible. In fact, the total number of fleet sales for all 60 franchises was 34,801, just 11.95 percent of total sales for the franchise-rank makes.

That compares to a staggering 337,715 fleet sales made last year by the 10 top franchises from each of the 10 domestic divisions — nearly 10 times as many fleet sales by about half the number of dealers.

In other words, the top import dealers each averaged about 183 fleet sales each last year — less than one a day — while the top domestic dealers each averaged about 3,377 fleet sales.

Not surprisingly, Longo Toyota — a single-line dealership — also rang up the most total dealership dollar sales last year among the import sales giants, reporting $228 million. Second-highest in total sales dollar volume was Isuzu dealer King Motor Co. of Fort Lauderdale, Fla., which also sells Oldsmobile, GMC trucks and Suzuki, with $158.1 million. The dollar volumes listed in the accompanying charts include sales for all the makes sold at the store listed.

Another exclusive Toyota dealership ranked third — Gateway Toyota, Toms River, N.J., with total sales of $133.2 million.

The dealership with the highest parts and service dollar sales was Mercedes-Benz dealer Slemons Imports, Newport Beach, Calif.

Dealer Jim Slemons augments his traditional parts and service business with boutique and wholesale parts distribution. He reported parts and service sales of $19.1 million for last year. Slemons said this year's parts and service dollar volume will top $25 million.

The second highest in parts and service dollar volume, $15.5 million, was reported by Longo Toyota. Although Slemons and Longo are both single-line dealerships, the parts and service figures in the accompanying charts include sales for all lines at the stated dealerships.

Geographical analysis of the top 190 franchises showed few surprises; in fact, analysis tended to reinforce stereotypical images and perceptions.

A total of 58 of the 190 Import Sales Giants are in California; New Jersey and Texas each have 19; Virginia, New York, 13; Georgia, Florida, 12; Maryland, Massachusetts, 8; Illinois, 7; Pennsylvania, Colorado, 3; Arizona, Connecticut, Michigan, Washington, 2; and Oregon, Indiana, Ohio, Nevada, North Carolina, Alaska, Puerto Rico, 1 each.

The geographic depiction — with heavy concentration on the West Coast, the East Coast and the southern Gulf Coast regions — shows the import market strength spread across the bottom of the continental United States like a smile with a few scattered freckles across the heartland.

The attraction of the California market and its preference for things imported was clear. Seven of the 10 leading Nissan franchises are located there, as are six of Honda's, six of Toyota's, five of BMW's and five of Volkswagen's.

In fact, only Audi, Isuzu and Porsche had no leading franchises in California.

Among the top import franchises, there was an almost even split between dualed and exclusive stores: 96 of the 190 top franchises were exclusive; 94 were dualed, and 24 of those were dualed with domestic makes.

The exclusive points were largely clustered in makes with formal or informal policies about exclusive dealerships as well as in systems that reward "loyalty."

Leading the exclusivity parade was Toyota with a perfect 10. Close behind were Honda and Nissan, each with nine. Then came Mercedes-Benz, Subaru and Volvo, each with eight, plus BMW and Hyundai with seven each.

The reasons dealers listed for last year's success included many of the standard items that characterize any successful business: strong management, good location, a new facility, good product, large inventory, aggressive sales force, consistent advertising, a loyal owner body, concern for the customer, emphasis on individual profit centers, a good used-car trade and old-fashioned hard work.

Some dealers said they were successful because they offered customers more than one make.

Others took a different approach: "We treat each franchise with the same degree of importance," said Saab dealer Richard A. Rankin, president, VOB Auto Sales, Rockville, Md. Rankin also sells Nissan.

"Exclusivity," said Volvo dealer Michael Lazarus, Volvoville USA, Massapequa, N.Y. "Selling only one manufacturer causes all efforts (to be directed) toward a common goal."

Some dealers, however, credited good fortune. "Lucky, I guess," said Isuzu dealer Ben Smith, Mealey Smith Isuzu, Orlando, Fla., in explaining his success. "I'd rather be lucky than good!"

Alfa Romeo dealer Serge Dermanian, owner of High Performance Cars, Waltham, Mass., had a little different perspective.

"I worked at HPC since 1965 as a mechanic, and I bought the company in 1969," Dermanian said. "The most important factor for my success is my training in France where I was born and brought up as a mechanic, going through very extensive training as a technician — in both automobiles and aircraft — from one of the country's best schools."

There also was the clear influence of mega-dealer organizations, multi-franchise dealerships and family operations throughout the Automotive News Import Sales Giants listing.

There were 16 instances in which a dealer owned more than one store on the list. Heading the list were the Norman Braman organization with three separate stores ranking as Top 10 franchises in BMW, Porsche and Rolls-Royce; the Stohlmans, with two dealerships scoring a total of three leading franchises in Nissan, Subaru and Volkswagen; and the Ellis family in Atlanta.

Richard H. Stohlman scored with both VW and Subaru at his Tysons Corner, Va., dealership, while Edwin L. Stohlman III scored with Nissan in Alexandria, Va.

In Atlanta, Jim Ellis and James W. Ellis Jr. ran leading Audi, Porsche and Volkswagen dealers, although Atlanta Mercedes-Benz dealer John Ellis is not related.

Other interesting familial combinations included Hanley Dawson Jr. and Hanley Dawson III, who each had a Top 10 Saab franchise in the Chicago area.

Among the dealers who had two or more Top 10 import franchises, either dualed or free-standing, there was a clear correlation between market segments; dealers tended to have ranking franchises in similar or related segments.

In addition to the multiple Top 10 import franchise organizations, there also were eight dealers who also had domestic-make dealerships among the earlier Automotive News Domestic Sales Giants.

Automotive News chose franchise unit volume as the most meaningful measure of the country's largest dealership, chiefly because of the importance of the fleet market — estimated by various sources at between 20 percent and 40 percent of total new-vehicle sales. Yet these fleet sales are not very profitable for dealers, so a ranking of franchises by dollar volume ignores the tremendous number of vehicles they sell.

A number of import franchises were not included because they were forming their dealer networks in 1986, including Acura, Mitsubishi, Suzuki and Yugo. However, Hyundai Motor America and its dealers chose to participate, even though many of its top dealers were in business for 10 months or less. A few low-volume makes were skipped.

Import Sales Giants data was compiled by the Automotive News staff from various sources. Most but not all importers supplied information on their top dealers. Dealers themselves were polled. In the few cases in which top dealers declined to participate, estimates of their volumes were made from multiple sources.

Contributing to this report and the accompanying table were Automotive News Staff Reporters Laura Clark, Mary Connelly, Matt DeLorenzo, Arthur Flax, Francis J. Gawronski, Helen Kahn, Louise Kertesz, Michelle Krebs, Philly Murtha, Roger Rowand, John A. Russell, Jesse Snyder, Geoff Sundstrom, Charles M. Thomas and David Versical. Artwork by Ruth Skurda.

Turnover high among biggest Subaru dealers

Since 1986 ended, several of the top-selling import franchises have changed hands, as entrepreneurial dealers buy and sell hot properties.

However, one of the most unusual situations was among the top-selling Subaru dealerships. Of the 10 dealers who owned last year's best-selling franchises, four no longer own the dealerships involved.

Three dealerships have been sold, and one — top-selling Wilmington Subaru — was closed outright after losing $1 million in the first eight months of 1987. The Rustuccia family replaced the Subaru franchise with a Jeep-Eagle franchise in the same point.

— Edward Lanham

The man who could be king

William Clay Ford Jr. is content with being managing director of Ford Switzerland — for now

By Richard Johnson

ZURICH, Switzerland — William Clay Ford Jr. didn't so much join Ford Motor Co. in 1979. It was more like getting shot out of a cannon — and he has been rocketing through the company ever since.

To no one's surprise, the great-grandson of company founder Henry Ford and son of vice-chairman William Clay Ford is on a fast track. More important is the fact that he appears up to the challenge. After a wide-sweeping whirlwind first leg of his career, Bill Ford has landed here as managing director of Ford Switzerland.

At age 30, the young executive would not mind putting down a root or two. "I think it's clearly time to settle into a career path," he says. "As my responsibilities increase, I can't go jumping from job to job, like I have in the past. But it wasn't a bad way to start."

He began in advanced-vehicle product planning in Dearborn, Mich., and soon moved to the company's Wayne, Mich., assembly plant to participate in the Escort/Lynx launch.

Next he was a Ford Division zone manager in New York state, then returned to company headquarters in Dearborn to serve on the 1982 UAW contract-bargaining team.

That was followed by stints at North American Automotive Operations marketing and Ford Division advertising, before diverting just long enough to earn a master's degree in management from the Massachusetts Institute of Technology's Sloan School of Management.

Afterward, he worked in finance at Latin American Automotive Operations in Dearborn, then became product-planning manager for two joint-ventures with Mazda Motor Corp., involving Mercury Tracer and Ford Festiva cars.

In July 1986, he arrived in England as head of commercial-vehicle marketing for Ford of Europe, launching the new Transit van. Fourteen months later, when the Swiss job opened, he was granted his request for a national managing-director position in Europe.

"I would like to see the pace (of job changes) slow down," he says. "I think it was good initially, because I've really seen a lot of the company. I've had a chance to see how the various operations work, and to get to know people. But my last job was longer than most of the previous ones, and I hope this one is a couple of years, at least."

While his cousin, Edsel Ford II, has made a name for himself in the company's marketing realm, Bill Ford will not necessarily pursue a sales path.

"Finance and product development are also areas that have great interest for me," he says. "I think one of the strengths of my background is that it keeps a general management kind of career open. I have a general business background — both educationally and in job experience — so I don't think I've closed any doors, as far as a career path."

Including credit offices, the Ford Switzerland operation comprises about 100 people. It has 73 primary dealers and 250 sub-dealers (small garages affiliated with main dealers).

Bill Ford — the only American in the Zurich office — oversees the sales organization and credit, as well as parts and service and tractor operations, whose managers also report to European headquarters.

"I asked for this job," he says. "I really wanted an operating job that had profit-and-loss responsibility. It was ideal because, at this stage in my career, I didn't see where else I could have this kind of responsibility. I really have everything here except manufacturing."

He adds: "It's a good size — about in the middle of the 15 national companies in Europe. And security isn't a consideration; Switzerland is very safe."

According to statistical firm AID Ltd., Ford ranked fifth in new-car registrations in Switzerland in 1986 with 24,394 — behind VW-Audi Group (47,716), GM-Opel (39,138), Peugeot (26,679) and Toyota (24,555) — for 8.1 percent of the market.

Unfortunately, Bill Ford arrived here at a difficult time. The Swiss have phased in 1983 U.S. emissions legislation, temporarily leaving the company without a full upper-range product line in the country.

As a result, according to industry statistical sources, Ford sales in Switzerland this year were down 14.6 percent through October, while market share fell about 1 percentage point from last year.

"Our share is down, largely attributable to the engine situation," concedes Ford. "There is a lot of disposable income in Switzerland, it is a very high-image market and we lost our image products. We don't have the Cosworth Sierra, we don't have the 4x4 Sierra and Scorpio, or the turbo Escort; in fact, we don't have any turbos here, and that hurts.

However, prospects are destined to improve in 1988 when several models return to the lineup about mid-year.

In addition, Ford Switzerland is about to reintroduce some U.S. products, one of the first Ford national companies in Europe to do so. In January, the Bronco II and Taurus wagon will be launched.

Bill Ford believes Bronco II is right for the growing four-wheel-drive phenomenon in Europe, and figures the Taurus wagon will fill the void created by lack of a Scorpio wagon in Europe.

"With the dollar declining and U.S. quality up so dramatically over the past few years, I think these products are really going to do well here," he says.

Ford Switzerland also may receive other models from the U.S., possibly for the 1989 model year. Prospects include the Aerostar van, Thunderbird Turbo Coupe and Lincoln Continental.

Bill Ford also would like the five-liter V-8-powered Mustang GT, but it does not meet Switzerland's engine-noise limitations.

Switzerland traditionally has absorbed a relatively high volume of American cars. General Motors, for example, offers several U.S.-made models, and in 1987 through October had sold approximately 1,200 units, about one-third of all U.S.-built GM cars sold in Europe.

Because the Swiss market is among the most competitive in Europe, it is an excellent training ground for a young executive. Switzerland has no restraints on Japanese imports, its personal income is high and the citizenry is relatively cosmopolitan.

Observes Ford: "I think there are a lot of similarities between Switzerland and America. Both are consumer-driven societies."

Despite his youth, Bill Ford is in a unique position to assess the global-car concept embraced by Ford Motor Co., having traveled from the halls of product planning in Dearborn to the specific-market challenge of a small but strategic foreign country.

He says, "I think a world car can and will work. It has to work. One of Ford's great strengths is that we are a very strong international company, and we need to capitalize on that strength. If you look at how the Swiss market is open and receptive to U.S. products, it shows there really is a (global) convergence now, in both product and customer taste."

Because most of the company's top executives over the past two decades have had overseas experience, working at Ford of Europe is popularly viewed as a key to upper-management ascension.

Says Bill Ford: "The experience here has helped me a lot. Ford of Europe is a much smaller outfit than Ford North America. You can get your arms around it a lot easier. You get to know all the people, and you have much more input into management decisions. At a younger age, and at a relatively lower rung on the ladder, you can have more influence in Europe. The amount of knowledge one absorbs is pretty great."

Some industry observers believe that, of the four family cousins now working in the company, William Clay Ford Jr. has the best shot at rising to the top. Neither Edsel, 38, nor Bill has hidden his ambitions under a basket. But they aren't necessarily rivals. There is enough of an age difference for some to suggest the possibility of Bill succeeding Edsel as chairman someday.

Some also say Edsel has helped clear a path for his younger cousin by proving his competence in key marketing positions and by defusing the nepotism issue with his intelligence, candor and sense of humor.

"Edsel and I are different people, but he has done a great job and probably has made it easier for me," says Bill.

Does William Clay Ford Jr. covet the chairman's position once occupied by his great grandfather and his uncle?

He replies: "I wouldn't be much of a businessman if, at this stage in my life, I didn't set lofty goals for myself. That would be true if I were self-employed or working for IBM. But whether it's *the* top job or *a* top job doesn't much matter. Once you get within striking distance of the top, they're all important. Yes, I've got high goals for myself, but I don't think there is just one job that could make me happy."

Meantime, he remains unpretentious and seemingly at ease with his prince-like status within the company. He says, "There is no question the name Ford helps. It helps get your foot in the door. But it's up to you to push the door open and walk through. You've got to prove you're as good as the next person. I think, in many ways, people look at us with the Ford name a bit more critically. But that's OK. I kind of like that."

Now and again, he says, he has thought about pursuing a career outside of Ford: "A lot of people feel it's pre-ordained — your name is Ford, and you're going to work at Ford. I never really felt that. When I joined the company, I felt that everything I had in life was due to Ford Motor Co. and, therefore, I owed it an honest shot. But my father said to me, 'Don't do it unless you want it, because you won't be doing anybody any favors.' Fortunately, I've enjoyed it. But I did, and still do, give thought to other endeavors. It's only natural." ■

Vehicle Production in Japan

SALES

Canada sales of North American cars rise 6.9%; GM up

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Sales of North American-built cars in Canada jumped 6.92 percent in November from the year-ago period, partially due to increases posted by General Motors.

Canadian new-car dealers sold 51,970 North American-built cars last month compared to 48,606 in November 1986. GM sold 29,913 North American-built cars, up 10.63 percent. Ford sold 12,040 domestic cars, up 1.80 percent. Chrysler delivered 9,020 North American-built cars, down 5.25 percent.

Among the import companies with Canadian plants, Honda sold 896 Canadian-built Hondas (all Accord models) compared to 60 in November 1986, the first month it produced cars in its Alliston, Ontario, plant.

Volvo sold 101 Canadian-built cars last month compared to 160 cars in November 1986.

CANADA MARKET SHARES November 1987

Cars	
General Motors	57.56%
Ford Motor Co.	23.17%
Chrysler/AMC	17.36%
Honda	1.72%
Volvo	.19%
Trucks	
General Motors	40.72%
Ford Motor Co.	35.28%
Chrysler/Jeep	24.00%

GM continued to offer a choice of free air conditioning, free automatic transmissions or $500 on selected cars and trucks. Consumers could also receive free GM Protection Plan benefits by buying selected models, some of which were included in the previously mentioned incentives.

Ford offered $500 cash rebates on 1987 and 1988 Ford Taurus, Escort and F-series truck models and $1,000 rebates on 1987 and 1988 Merkur XR4Ti models.

Truck sales in Canada continued to soar, with sales of domestic trucks rising 34.33 percent. Canadian dealers delivered 32,527 domestic trucks last month compared with 24,214 a year ago.

Ford and Chrysler set monthly truck records. Ford sold 11,473 trucks (all North American-built) in November, up 32.70 percent. Its previous November truck record was set in 1979 when 10,098 trucks were sold.

Chrysler sold 7,809 trucks last month, up 73.88 from 4,491 sold in November 1986, which was the previous November record. Chrysler's November truck sales include 5,345 domestic Dodge trucks and 2,128 Jeeps. The company purchased American Motors and its Jeep operations on Aug. 5, 1987.

GM delivered 13,245 domestically built trucks, up 19.57 percent from November 1986.

In addition to North American-built cars, General Motors also sold 1,066 Chevrolet Sprints, 933 Pontiac Fireflys, 114 Chevrolet Spectrums, 90 Pontiac Sunbursts and 12 Isuzu I-Marks.

Ford sold 45 Merkur XR4Tis, 613 Tracers and 15 Scorpios. Chrysler sold 958 Mitsubishi cars, 11 Peugeots and 77 Renault Medallions. Honda sold 3,853 imported Hondas and 600 Acuras, all from Japan. Volvo sold 377 Swedish-built models.

In the imported-truck category, GM sold 30 Isuzu Troopers and Chrysler sold 336 Mitsubishi trucks.

U.S. cars drop 1.9% in early December

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Domestic car sales in early December slipped 1.93 percent below the year-ago period — not a bad showing considering that last year's early-December car sales were boosted by pending reform of U.S. tax laws.

Auto manufacturers had expected this year's December car sales to be flat.

There were 187,126 cars sold during the Dec. 1-10 period this year, compared with 190,809 in the 1986 period. Sales gained momentum with incentives added in late November. The final 10 days of the month finished with a 2.48 percent upturn in domestic sales compared with the year-ago period.

In spite of the late November upturn, the industry's year-to-date total of U.S.-built cars was 6,717,712 cars, down 13.12 percent from 7,732,389 cars sold through Dec. 10 last year.

In early December, the daily selling rate was 20,792 compared with 21,201 during the equivalent period last year, a difference of 409 cars a day. Both periods had nine selling days.

DOMESTIC SALES

	Dec. 1-10, 1987	Dec. 1-10, 1986
Eagle	453	1,110
Chrysler	9,103	5,885
Plymouth	7,663	10,275
Dodge	9,595	11,412
Chrysler Motors	26,814	28,682
Ford	40,401	40,858
Mercury	11,917	12,475
Lincoln	4,523	6,825
Ford Motor Co.	56,841	60,158
Buick	14,629	15,361

Oldsmobile	15,557	18,467
Pontiac	15,832	16,742
General Motors	92,036	94,120
Volkswagen	873	1,220
Honda	6,997	4,202
Nissan	1,530	2,006
Toyota	1,862	421
Mazda	173	—
U.S. Industry Total	187,126	190,809

None of the Big 3 U.S.-based automakers posted gains during the Dec. 1-10 period. Only Honda and Toyota reported sales upturns over the year-ago 10-day period.

General Motors' sales slipped 2.21 percent in the first 10 days of the month. Sales were 92,036 compared with 94,120 last year. Total Cadillac sales rose 5.4 percent compared with the like period in 1986.

Ford Motor Co. delivered 56,841 cars — 5.51 percent fewer cars than a year ago when it sold 60,158. Mustang sales rose 41 percent over the year-ago period when there was a shortage of Mustangs.

Chrysler Motors' sales fell to 26,814, down 6.51 percent from 28,682 in early December last year.

Toyota reported a 342.28 percent leap in sales of U.S.-built cars. Last year at this time, Toyota had just begun to build cars at the Toyota-GM joint venture plant in Fremont, Calif.

Honda's sales of U.S.-built cars for the 10 days rose 66.52 percent compared to a year ago. Civic sales were 2,405 compared with 904 in 1986's same 10-day period.

Nissan's sales of domestically produced cars dropped off 23.73 percent in the first 10 days of December. Volkswagen's U.S.-built car sales fell 28.44 percent.

PRODUCTION

Car build drops 11%

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's targeted domestic auto output of 132,594 cars was 11.64 percent below the prior week's 150,058 and 25.54 percent below the year-ago week's 178,068.

Companies split last week's targeted production as follows: General Motors, 40.53 percent; Ford Motor Co., 30.70 percent; Chrysler Motors, 18.25 percent; Honda of America Manufacturing Inc., 5.17 percent; New United Motor Manufacturing Inc., 2.45 percent; Volkswagen of America, 1.51 percent; Nissan Motor Manufacturing Co. U.S.A., 1.01 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.38 percent.

GM's Oklahoma City plant closed last week until after the holidays for inventory adjustment, affecting 4,300 workers.

GM also shut down the Oldsmobile Calais and Buick Skylark lines at its Lansing, Mich., plant last week for inventory adjustment. Production is scheduled to resume Jan. 4.

About 3,000 workers were temporarily laid off at GM's Tarrytown, N.Y., plant last week for renovation of the paint shop. The plant is slated to reopen Feb. 1.

The holiday will be extended until Jan. 18 for workers at GM's Van Nuys, Calif., plant for inventory adjustment. About 3,500 workers will be affected.

GM's Pontiac Fiero plant in Pontiac, Mich., will be idle from Jan. 4 until Jan. 25 for inventory adjustment. When the plant resumes output, the line speed will be reduced from 30 units per hour to 15 per hour, resulting in the permanent layoff of 425 workers.

GM's Lakewood, Ga., plant will be closed for one week for inventory adjustment beginning Jan. 4, affecting 3,700 workers. On Jan. 25, the second shift will be dropped, laying off 1,600 employees.

GM's Wilmington, Del., and Linden, N.J., plants, which produce the Corsica/Beretta models, shut down today until Jan. 18 for equipment installation and plant rearrangement.

All plants will close Wednesday for the Christmas holiday.

Truck production steady

Truck production in the United States continued at a strong pace last week.

Truckmakers scheduled 84,876 units, slightly above (0.54 percent) the previous week's 84,417 and 15.10 percent more than the year-ago week's 73,742.

General Motors' Pontiac West plant, Pontiac, Mich., will be idle Jan. 4-18 for inventory adjustment.

Only three days of production remain this year. All truck plants close Wednesday for the Christmas holiday. Production resumes Jan. 4.

Canadian car output rises

Targeted Canadian auto production of 22,822 cars last week was 5.07 percent more than the prior week's 21,720 but 8.33 percent below the year-ago week's 24,896.

So far this year, 788,972 cars have been assembled, 24.65 percent below the 1,047,051 completed last year at this point.

Last week's scheduled truck production totaled 19,094, slightly higher (0.18 percent) than the previous week's 19,060 and 34.95 percent more than the year-ago week's 14,149.

Chrysler Motors ended production of its Eagle four-wheel-drive wagon last week. It was built at the Brampton, Ontario, facility. The plant will continue to assemble the Jeep Wrangler.

All plants will shut down Wednesday for the holidays. They will reopen Jan. 4.

Consumer confidence slips a bit

ANN ARBOR, Mich. — Consumer confidence continued at the lower levels reached after the collapse of the stock market Oct. 19, according to the November Survey of Consumer Attitudes prepared by the University of Michigan's Institute of Social Research.

Favorable attitudes toward vehicle buying were held by 57 percent of all families surveyed, 3 percentage points more than during the period immediately following Black Monday.

But that still was 1 point below October's index, 9 points below the level of three months earlier and 6 points lower than what was recorded for November 1986.

The percentage of those who said it was a bad time to buy a car rose to 35 percent in November from 31 percent a month earlier.

About 31 percent of the respondents who said it was a good time to buy a vehicle said prices are low and good buys are available.

Respondents who said it was a not a good time pointed to high prices, high interest rates, tight credit and an uncertain economic future.

In commenting on the weaker confidence levels in November, the survey reported that "the decline has been largely due to the ending of the last round of deep discounts on interest rates offered by vehicle manufacturers."

Correction

The import days' supply numbers and total inventory figures that appeared in Automotive News Dec. 14 were incorrect. The new inventory numbers are as follows: Total import cars, 583,128, and total import trucks, 201,613. The correct days' supply figures are reprinted in the chart below.

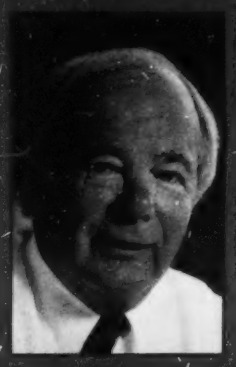
63rd year—$50.00 per year, $1.25 per copy

1987 Newsmakers of the Year

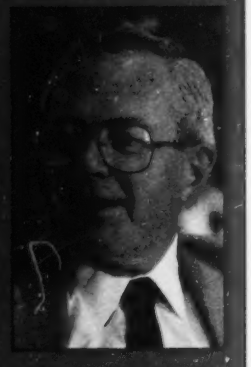


Bennett Bidwell: As strategist behind the acquisition of American Motors-Jeep and Italy's Lamborghini, the Chrysler vice chairman broadened its base in both products and technology.

Owen Bieber: In a year when labor woes seemed inevitable, the UAW president forged new deals at Ford and General Motors that reflect cooperation, security and management flexibility.

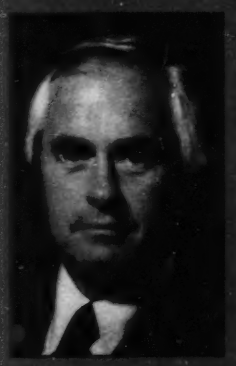
Tetsuo Chino: Honda's North American head made Acura the first second-channel success and launched a second Ohio plant, to build more cars for the U.S. and for Europe-Japan export.

Henry Ford II: The industry lost a great leader when the man who saved Ford Motor Co. in the 1940s, took it public in the '50s, and paved the way for its success in the mid-1980s died.



Elmer Johnson: Became a GM executive vice president and board member, and engineered investor force-feeding, major personnel changes, labor talks, and was tapped as future chairman.

INSIDE: The Year in Review

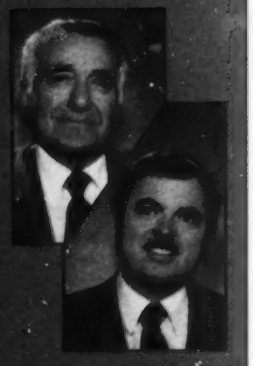


Roger Penske: In a big year, this entrepreneur's team won Indianapolis 500, acquired the New York City Chevrolet-Cadillac dealerships, and took control of GM's Detroit Diesel subsidiary.

Neal Phillips: Volkswagen of America president struggled to rebuild Audi's image and market after bout with sudden acceleration, and killed VW's Westmoreland plant, a U.S. transplant first.

Robert Rewey: His Ford Division beat Chevrolet in sales for first nonstrike year in three decades, capturing top car and truck honors and leading to Ford's second year of record profits.

Roger Smith: Relinquished GM chairman began the year taking heat for Ross Perot buyout, suffered much criticism on other fronts, and ended 1987 having lost more than five points of market share.



Edward and Mikhael Steven: Father-son Kansas dealers filed to offer public ownership in their Yugo, Maserati, Rolls-Royce and Bertone franchises — the first in what could become a national trend.

Mazda boss quits amid profit dive

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Kenichi Yamamoto surprised the Japanese industry and apparently many people in his own company, stepping down as president of Mazda Motor Corp. one year before completing his second term in office.

Yamamoto, 65, cited a health reason — the English translation of which is a "crick in the back" — an injury that led to hospitalization and still requires medical treatment.

But the resignation was announced one day before Mazda released what analysts call a "very severe" financial report for fiscal 1987, leading some knowledgeable observers to question whether the events were related.

Yamamoto will be replaced by Norimasa Furuta, 59, a former Ministry of International Trade and Industry career bureaucrat who joined Mazda in 1985, first as an adviser and later as senior managing director. It is the first time a Japanese automaker has given its top post to a non-company man.

Furuta described his appointment as a "bolt out of the blue." He said he would work to build up the company to face the difficult conditions brought on by the highly valued yen.

Yamamoto retires after completing his primary project, the beginning of U.S. production at the Ford-Mazda plant in Flat Rock, Mich. An engineer by background, Yamamoto was responsible for the development of the rotary engine.

He will continue to advise, particularly on technological matters, from his new post as chairman of the board. Chairman Moriyuki Watanabe steps aside and becomes executive adviser.

The new president, presumably, will concentrate on more political and managerial matters.

A report in the authoritative newspaper Asahi Shimbum suggested that part of the reason for the shift from Yamamoto to Furuta may have been a disagreement over management policy between Sumitomo Bank, Mazda's most important backer and the financial institution that rescued it from near-bankruptcy during its rotary engine difficulties of a decade ago, and Ford, which owns 24 percent of Mazda. Part of the problem, the newspaper said, is that Ford tends to treat Mazda as a subsidiary, including it in Ford's worldwide strategy — without re-

Overcapacity to linger

May be 4 million in 1992, Chrysler says

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The current 5.0 million units of unused car and truck assembly capacity in North America isn't expected to improve much in the next five years, despite announced plans to close more plants.

That 5.0 million units in unused car and truck capacity includes 4.4 million for the traditional North American producers and 600,000 for the "transplant" producers, according to Donald P. Hilty, Chrysler corporate economist.

Despite announced plant closings, there still could be as much as 4 million units of unused capacity for the traditional domestic producers in the United States and Canada in 1992, unless more plants become competitive in the marketplace, Hilty said.

That means more economic hard knocks for non-cost-effective plants and companies. It also means there will be more pressure on workers to reduce costs with the

Job bank aids 85 at Chrysler

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — About 85 laid-off Chrysler Motors salaried workers who are represented by the UAW have become the first to benefit from a job-protection provision in the 1985 contract.

The workers were laid off last month but were subsequently recalled and placed in a job bank after the union proved they lost their jobs because of outsourcing or changes in technology or work methods.

About 100 workers at UAW Local 412, which represents technical, office and professional workers at Chrysler facilities, were laid off. About 85 of those workers were later placed in a job bank, and some of the

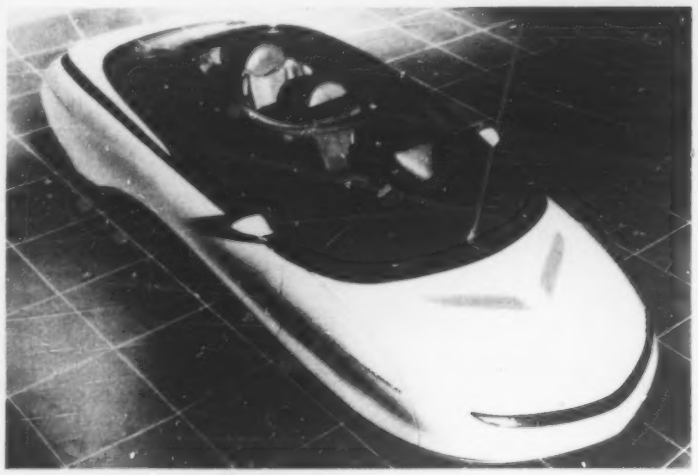
At L.A. auto show
Volkswagen Scooter, a cross between a motorcycle and a sports car, will be among the concept cars featured at the 1988 Greater Los Angeles Auto Show. Also appearing at the show will be the Nissan ARC-X, a futuristic family sedan; Chrysler Portofino, a 150-mph touring sedan that's powered by Lamborghini; and Chevrolet's Aero 20003A, a car that boosts one of the lowest drag coefficients, 0.166. The show will be held Jan. 2-10 at the Convention Center.



Pontiac's Pursuit
Pontiac Pursuit packs four-wheel steering, four-wheel drive, and a four-cylinder engine pumping out 200 horsepower. It will be among the numerous concept cars on display at the Los Angeles show. Also competing for the attention of car buffs will be the Mitsubishi X2S, a two-seater designed by the automaker's styling studio in Cypress, Calif.; and the Ford Bronco DM-1, a concept vehicle that features privacy glass that changes from opaque to transparent at the flip of a switch.

Claybrook suing on passive belts

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Joan Claybrook, former head of NHTSA and current president of Public Citizen, is recruiting other consumer groups to join in a suit against NHTSA over the agency's decision to grant a four-year delay for installation of passenger-side passive restraints.

NHTSA ruled in favor of Ford Motor Co.'s petition last March. It has denied Public Citizen's request to rescind the decision.

Public Citizen will be joined by the Center for Auto Safety, U.S. Public Interest Research Group, Massachusetts Public Interest Research Group and possibly other organizations.

The groups are challenging the four-year delay that NHTSA has granted the automakers, allowing them to use the manual 3-point belts on the passenger side until 1994 instead of 1990. The belt can be uses the belt if the driver's side has an air bag and the passenger's belt has been tested with an instrumented dummy in a 30-mph head-on crash into a fixed barrier.

The suit is expected to ask the U.S. Court of Appeals for the District of Columbia circuit to review NHTSA's decision to allow the delay and to ask the court to find that the denial of Public Citizen's petition for reconsideration was arbitrary and capricious.

On the assumption that the automakers will have until the 1994 model year before being required to offer full passive front-seat protection for both the driver and passenger, many auto companies have volunteered to produce millions of air bags and their suppliers have geared up that production for 1990 and later models. That outlook has now become clouded with litigation that could consume years.

This is the latest in a long series of petitions, delays, congressional actions and court suits involving passive restraints since the safety agency in 1969 first proposed the use of automatic belts or air bags or any other passive system to protect occupants.

The Ford proposal to delay implementation of the rule was supported by all the auto companies, the Insurance Institute for Highway Safety and State Farm Mutual Insurance.

But the Ford proposal was opposed by the Center for Auto Safety and by Public Citizen, which called the four-year delay in total passive protection "unconscionable" and then petitioned NHTSA to reverse its earlier decision. NHTSA said Claybrook had "misunderstood much of the rule" when it recently denied Public Citizen's petition.

The passive-restraint standard took effect with the 1987 model year. Ten percent of a manufacturer's 1987 car production was required to provide front-seat passive protection. Except for Ford's optional driver's side air bag, that was met mostly with passive belts.

A 25 percent mandate took effect with the 1988 models. It rises to 40 percent for 1989 models and reaches 100 percent the 1990 models unless by April 1989, states with two-thirds of the nation's population have in place mandatory seat-belt-use laws meeting certain federal criteria.

The exception for the front-seat passenger was requested by Ford because of various technical, engineering and supplier problems. Ford explained it preferred air bags to automatic belts and, if granted the exception, the company said it would produce a 1988 model with full front air-bag protection and produce between 500,000 and 1 million cars with driver's-side-only air bags between the 1990 and the 1994 model years.

Banking on NHTSA agreeing to the Ford petition, General Motors promised 3 million driver's-side air bags by the 1992 model year. Chrysler promised one model with a driver's-side air bag for the 1988 model year and driver's-side-only air bags across the board by 1990.

The Insurance Institute for Highway Safety hailed NHTSA's granting of Ford's petition as the "key" to the future of the air bag because it will give automakers ample time to design the system into future products.

In making the decision to allow four extra years for the phase-in, NHTSA had relied on a cost/benefit study performed by Ford and the insurance institute, claiming the "use rate of automatic safety belts must be at or near 60 percent before the benefits of those systems exceed the benefits of driver-only air bags."

The government described its acquiescence as a way to encourage early installation of air bags.

The arguments expected to be used in court are the same used in Public Citizen's petition: that NHTSA's action was not in accord with the remand given by the U.S. Supreme Court when it overruled former Administrator Raymond A. Peck's decision to rescind the passive restraint standard in 1981 on the grounds of cost and lack of public acceptability.

UNION WIN: *Cars & Concepts weighs options following UAW ratification vote*

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Production workers at Cars & Concepts Inc., a Brighton, Mich., auto customizer, have voted to join the UAW.

The successful 306-242 vote on Dec. 18 came after four previous attempts by the UAW and the Teamsters to organize the plant. A UAW spokesman said it is an important victory for the union, because Cars & Concepts is a "highly visible" automotive supplier.

Though most customizing and specialty vehicle firms are not unionized, their workers perform jobs similar to those in Big 3 auto plants, and the larger firms supply the Big 3.

Cars & Concepts workers produce vehicle conversions with convertible tops, T-roofs, vinyl roofs and sunroofs. They also customize bodies and interiors.

The UAW expects the election to be certified by the National Labor Relations Board. David L. Draper, Cars & Concepts president, said Tuesday that the company was evaluating its options. It had five working days to file an objection to the election.

"Obviously we're disappointed," said Draper, adding that about 70 eligible workers did not vote.

Cars & Concepts, with a total workforce of 1,200, has about 615 active production workers at its Brighton plant. The company has a plant in Missouri and will open another in Delaware Feb. 1.

Betty Harrison, UAW international representative who directed the organizing drive at Cars & Concepts, said the Brighton workers were concerned primarily with wages, health and safety and quality.

She said Cars & Concepts was "exploiting workers" by paying them $4-$5 an hour and working them very hard, and that contributed to a turnover rate of 600 workers since the beginning of 1987.

Draper said, "Our workforce has traditionally been quite young. A lot of young people just out of high school in this area are looking for this kind of job."

Draper said Cars & Concepts has always promoted from within, with several executives and all of the plant managers starting on the assembly line.

Draper said he could not "respond to the accuracy" of the turnover figure for 1987. "I don't know," he said. "I don't know how she (Harrison) would know."

As for wages, Draper said he wished he could comment but, "Facing a negotiation period, that would be foolish."

Harrison said that Cars & Concepts management tied GM plant closings to the union and showed a video of strike violence at a non-automotive firm.

Draper said, "We have an obligation to our employees to present the facts about unionism. That is a right we have by law. I think it's important as an employer to let your employees know, especially with a predominantly young workforce, what can happen if you choose to elect a union."

Cars & Concepts was founded in 1976. The company changed hands in a $25 million management buyout in 1986. Masco Industries, Taylor, Mich., bought Cars & Concepts from the management group last June.

Agreement sought in all-terrain- vehicle controversy

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — What to do about all-terrain vehicles was being discussed last week as the Justice Department, acting as lawyer for the Consumer Product Safety Commission, tried to reach an agreement with Lloyd Cutler, a prominent Washington attorney acting for the ATV industry.

None of the parties involved in the negotiations would comment, and the makers themselves said they were being kept in the dark until there was a firm proposal to accept or reject. Like any other consent settlement, it would have to be ratified by each ATV maker and would be in lieu of a lawsuit.

Speculation centered on a possible ban of any future three-wheeled ATVs, labeling of potential rollover problems on the four-wheeled ATVs and safety education to be required for all drivers, who are unlicensed and who are often children. Earlier speculation involved a possible buyback of all the three-wheeled ATVs, which could have cost the industry upward of $1 billion.

But at the last minute, two Democratic congressmen heading House consumer groups — Doug Barnard of Georgia and James Florio of New Jersey — called the proposed agreement "woefully deficient" and asked for a delay to get public comment and to allow them to intervene in any suit the government might file.

Dec. 30 is the time set for a consent decree accompanied by a court case so the companies can make a choice.

The makers are mostly Japanese — Honda, which accounts for more than half the imports; Suzuki, which makes more of the very small ones used by children; Yamaha; Kawasaki; and Polaris, an American firm with a very small share. There are said to be hundreds of product liability cases in the courts, usually involving rollovers, allegedly from driver misuse or from a high center of gravity, and possibly involving improper pressure in the very wide tires. Figures used by congressional subcommittees show that since 1982, ATVs has been involved in more than 800 deaths and more than 275,000 injuries about half of which involved children under 16.

The companies admit to no safety defects. Honda says there are more accidents with the three-wheelers simply because there are more of them than four-wheelers.

OVERCAPACITY

FROM PAGE 1

clear threat of even more plant closings as an alternative.

Plant capacity is a difficult quantity to measure because of the flexiblity of line rates and other factors that can be adjusted to raise or lower a plant's output. There are various definitions of capacity and various ways to measure it.

Ronald A. Glantz, Montgomery Securities automotive analyst, defines a plant's capacity as its output on two shifts for 220 days.

"Add to that another one shift for 48 days plus another four hours a day for 220 days and you have maximum capacity without violating the labor agreement," Glantz said.

Others, including General Motors, simply define excess capacity as the difference between demand and the ability to produce, either globally or in local markets.

How much excess capacity there is — and the chilling corollary considerations of how many more plants will have to be mothballed and how many more workers will lose their jobs — have become key questions for industry forecasters and planners.

Adding to longer-range forecast uncertainties, according to Hilty, are market share considerations, particularly as they relate to traditional domestic manufacturers, the transplants and importers.

Hilty and Chrysler believe that because of the specter of excess capacity and additional plant closings, there will be renewed, "mounting pressure" to establish a new quota of 1.7 million imported Japanese cars.

Maryann Keller, Furman Selz Mager Dietz & Birney vice president and automotive analyst, said local-content requirements offer another alternative.

Hilty said that right now, the traditional domestic manufacturers have total North American (U.S. and Canada) car and truck capacity of 15.6 million units and that in 1987, 4.4 million units of capacity were unused.

Hilty said that including announced closings and startups, like GM's Saturn project, there will be capacity of 14.0 million units for the traditional domestic producers in 1992, without more closings.

"On a trend basis, the way we're going, with the cost penalties the traditional domestics have, it's easy to imagine that we could source maybe only 10 million by 1992," Hilty said.

"So we could have at least four million unused capacity on a trend basis."

He said the transplants have total capacity of 1.5 million now and that 600,000 units of it was unused in 1987 due to slow launch curves at the NUMMI plant in Fremont, Calif., and the Ford-Mazda plant in Flat Rock, Mich., as well as Volkswagen's cutbacks in Pennsylvania.

By 1992, Hilty estimates the transplants will have total capacity of 2.7 million units, not including the 300,000 at VW's Westmoreland, Pa., plant, which is scheduled to close at the end of the 1988 model year.

Excess capacity for the transplants will be determined by how much of the demand for their products is supplied by imports rather than local assembly.

Chrysler estimates import car and truck sales at 4.5 million for both 1987 and 1992.

Although Hilty frames the over-capacity problem in North American terms, he believes it extends beyond North America.

He said all three sources — traditional domestics, transplants and importers — will have some hard decisions to make.

Keller agrees.

"A tough competitive market means a tough competitive market for everybody," she said.

The market will be so tough and competitive, in fact, that Hilty and Keller agree that the domestics — GM, Ford and Chrysler — will have to close plants or cut costs, while Japanese makers will have to decide whether to export to the United States or assemble in North America.

George C. Eads, GM's corporate economist, throws the overcapacity even farther offshore.

Eads said he believes there will be worldwide excess auto assembly capacity of about 6 million units by 1990.

That is based on his estimate that by 1990 worldwide demand for autos (cars and vans) will equal 31 million units while "ability to produce" will equal 37 million units.

Eads computes market-by-market excess capacity as total production capacity in the market less demand in the market.

"If you look at the total demand in North America and the total ability to produce in North America, there is not excess capacity here," he said.

But he dismisses the fact that part of the North American demand is met by imports.

However, in Eads' opinion, the excess capacity situation will be resolved on a worldwide basis — not within the confines of local markets, like the United States, for example — because of the global nature of the auto industry.

"That (excess) capacity is going to come out of whoever ends up being the high-cost producers — no matter where they happen to be located," Eads said.

"I've seen too many calculations that start roughly with what I've been talking about or a residual number — and end up with four million excess capacity or two million excess capacity in the U.S., and they subtract that from the GM total, or the GM and Ford total and there ends up being no GM or Ford.

"That's not the way the world is going to be, because we don't plan to sit here and not reduce our costs."

Although Eads believes there will be a global resolution, he is at the same time very parochial about the actual location of the excess capacity pockets, using his formula of in-market ability to produce less in-market demand equals excess capacity.

In fact, Eads believes that North American demand will outstrip capacity by 1990 but that there will be "significant" excess capacity in Japan and newly industrialized nations and "some" excess capacity in Europe. Eads says he believes those countries will no longer enjoy a disproportionate competitive advantage over North American producers.

Hilty and Eads said that Japanese companies will be under cost pressures and ultimately may have to make decisions — economic or nationalistic — about sourcing, in effect allocating production to factories either in Japan or the United States.

The same is true for current low-cost producers.

Eads said that it is not safe to assume that a plant in a low-wage country will remain low-wage, due to currency fluctuations or other changes, or that it will have acceptable quality.

"You can't then just land that stuff in the United States and assume it'll be snapped up," Eads said. "Nothing's automatic about this.

"It's going to be a very hard fight," Eads added. "Much of the fight is going to occur in this country, but I don't think there is an auto plant in the world that can assume it is safe no matter what it does.

"All manufacturers, no matter where they are, are going to have to really keep on their toes . . . make sure the product is good, the costs are low . . . and that's going to ensure survival."

Automotive News Staff Reporter Michelle Krebs contributed to this report.

HAHN

FROM PAGE 2

Hahn said it is "not yet determined" if production of the subcompact VW Polo, now built both in Germany and by Seat in Spain, will move entirely to Spain because of lower production costs. German unions have strongly opposed such a transfer.

"It is an open issue," Hahn said. "We've had talks with our union people here about improvements in productivity."

He said rising labor costs in West Germany, where earlier this year metalworkers won a decrease in the work week to an eventual 37 hours, could undermine German competitiveness.

"It's a serious problem when you work so many hours less than other countries," he said.

But Hahn said he does not view the trend as a threat to German sourcing of VW's bread-and-butter Golf model.

"Our infrastructure for the Golf, which will last for additional models, and the number of Golfs we build, permit us to produce successfully here," he said.

Hahn said Europe, which is in its fifth year of expansion with sales expected to surpass 12 million units in 1987, "will come now to a technical consolidation."

"That still means an enormous market," he said. "But you cannot expect that Europe will go up again, notwithstanding that three European markets — France, Italy and Spain — seem to be in strong expansion. He predicted that both Italy and France will go over 2 million units in sales for the first time in 1987.

"We think that the stock market and dollar might not affect the European scene too much," he said. "Everyone feels a little nervous about it, but we have no indication in our new-car orders so far that consumer confidence in Europe has been affected."

Hahn said the rapid decline of the dollar against the mark won't impact timing or allocation decisions concerning German-sourced exports to the United States.

"The present situation is painful for exporters, but we had foreseen this development, which is why we have changed sourcing to Brazil," he said. "When business gets more difficult, you have to work more. It's not a matter of delaying anything."

Hahn said supplies of the Brazilian-built Fox subcompact in the United States will improve markedly in 1988. Shipments this year have been interrupted by strikes and other problems.

"We have a capacity that will be better utilized in Brazil," he said. "I think that Fox sales next year will be at least 50 percent up over this year."

Introduced last spring, the Fox helped bolster falling VW-Audi sales in the United States this year. With better availability of the Brazilian car and the new Audi 80, Hahn predicted that in 1988 the group in the United States "will hold our volume, as we are in a declining market."

As for Audi's lingering image problems because of the sudden-acceleration controversy, Hahn said, "We are not blind to the fact that this battle is not over." He said the new 80 model "will be an excellent tool for stabilizing the Audi franchise."

In Western Europe, the VW Group, including Audi and Seat, apparently will finish 1987 as number one in sales for the third straight year. However, some analysts believe Fiat Auto's new Golf competitor, the Tipo, will put the Italian group on top in 1988.

"We will try to be number one again, but whether we make it depends on many factors that are not all predictable," said Hahn. "They (Fiat) have new vehicles, we have new vehicles."

Hahn expects an agreement under which Nissan has assembled and marketed VW's Passat-based Santana in Japan to be renewed, even though the car has never reached sales levels that had been forecast. A new Passat (Quantum) to be unveiled by VW early next year is expected to be licensed for production by Nissan.

"We have already said in principle that we are going the way of continuing our joint venture," said Hahn.

Beginning in 1989, VW will begin producing Toyota-designed pickups in Hannover, West Germany, in order to make use of excess capacity. Speculation has surrounded a joint passenger-car deal in Europe, but Hahn said there are no plans or discussions involving Toyota.

In South America, the first year of operations for Autolatina has been fraught with troubles. Autolatina has won a preliminary ruling from an appeals court allowing it to raise prices in accordance with an earlier agreement with the Brazilian government. However, the legal battle continues and some economic analysts in Brazil say there is a risk that Autolatina could pull out of the country if the government continues to take a hard line. But Hahn said the joint company will not withdraw.

"The court, which has taken our side, has reassured us that there is in Brazil a legal system that also gives a foreigner equal rights."

But before committing to reinstatement of postponed investment plans in Brazil, Hahn said, "We have to see what damage this economic situation has caused us. You can be sure we will do the maximum and the reasonable.

"I'm very positive about the start of Autolatina," he added. "This company had a flying start under the most adverse conditions."

Hahn promised no more surprises in connection with the foreign currency scandal that brought criminal charges against VW officials earlier this year. There were recent reports that new evidence of additional losses through embezzlement had been uncovered by investigators. Hahn said, however, that the 473 million marks ($292 million) set aside earlier this year to cover losses remains sufficient.

"There is nothing on our books left (to cover additional losses,)" he said. "Everything is cleaned out. The cheating that had been going on in the past years already had reduced our profits."

Hahn said VW still hopes to recover a portion of the lost funds through civil action.

COMING EVENTS

General

Jan. 11-13 — Limousine and Chauffeur Show, Atlantic City Convention Center, Atlantic City, N.J., (800) 732-7117

ALABAMA

AUTO DEALERS EXCHANGE
of BIRMINGHAM
Proudly Presents our First
GENERAL MOTORS FACTORY SALE
TUESDAY, JANUARY 12th - 10:00 A.M.

Below Is a List of the Day's Events:

I. 500-600 G.M. UNITS—Cleaned the Birmingham way. You will not find G.M. Factory units more front-line ready than you will at A.D.E. We take "pride" in having the best reconditioned vehicles in the country.—Come judge for yourself.

II. Free Southern Country Breakfast—Country Ham, Eggs, Grits, Home Fries and Home Made Biscuits & Gravy.

III. Early Bird Drawing--$500.00 in CASH will be given away at 10:00 A.M. sharp. Several thousand dollars in Prizes to be given away at the conclusion of Sale-A-Rama.

IV. Free Airport Pickup—Convenient lodging at the exclusive Rime Garden Inn where A.D.E. special rates for suites are $56 per nite (The motel on the auction premises could possibly be ready for occupancy for this first sale). Call Gayle today for Auction Registration and Motel Reservations (205) 699-1010.

V. The most relaxing atmosphere you will ever experience at any auction with genuine Southern hospitality and service at its best where your courteous treatment is our first concern.

Westbound on I-20 exit 144.)

PRODUCTION

'87 car output off 9%

By Karen Detkowski
SPECIAL CORRESPONDENT

As production for the year ended last Wednesday, the estimated output of 7,022,521 cars in 1987 was down 9.21 percent from the 7,734,489 produced last year.

Showing gains for this year's estimated production were Ford Motor Co. with 1,816,447 units, up 3.95 percent; Honda of America Manufacturing Inc., 321,862, up 37.88 percent; and Nissan Motor Manufacturing Inc., U.S.A., 113,272, up 79.62 percent.

Posting production declines (estimated totals) compared with 1986 were American Motors, 15,994 units, down 66.91 percent; Volkswagen of America, 66,193, down 19.62 percent; General Motors, 3,417,057, down 16.30 percent; Chrysler Motors, 1,084,580, down 15.54 percent; and New United Motors Manufacturing Inc., 182,790, down 5.47 percent.

With only three working days and no overtime scheduled because of the holidays, last week's targeted domestic auto production dipped considerably from the prior week's output.

The automakers' estimated build of 75,065 was down 42.00 percent from the previous week's 129,420, and 12.19 percent below the year-ago week's 66,909 when there were two working days.

Last week's scheduled output was shared as follows: General Motors, 39.17 percent; Ford Motor, 31.89 percent; Chrysler Motors, 21.31 percent, Honda of America Manufacturing Inc., 4.56 percent; Volkswagen of America, 1.60 percent; Nissan Motor Manufacturing Inc., U.S.A., 1.07 percent; and Mazda Motor Manufacturing U.S.A. Corp., 0.40 percent.

Production is scheduled to re-Jan. 4.

Truck production rises 9%

Estimated domestic truck production for 1987 totaled 3,807,934, an increase of 9.31 percent over the running total for 1986. Truckmakers ended production for the year last Wednesday.

Increases over 1986 were reported by Dodge/Plymouth, up 111.58 percent; Jeep, up 17.66 percent; Ford Motor Co., up 7.07 percent; Navistar International, up 4.33 percent; and GMC, up 4.20 percent.

Posting production decreases for 1987 were: Nissan, down 6.43 percent and Chevrolet, down 0.26 percent.

Assembly plants are scheduled to resume production on Jan. 4.

Canada: Trucks top cars

Cars were down, trucks were up, and the combined 1987 production total for Canada's makers fell 207,045 units below last year's level.

Estimated auto production for 1987 was 802,581 units, 24.01 percent below 1986's total of 1,056,145 units.

Estimated truck production for 1987 was 817,320, 6.04 percent above the 770,801 units produced last year.

Car production last week was 14,151 units, 36.49 percent below the previous week's 22,280.

Last week's three-day truck output, scheduled at 10,993 units, was 41.74 percent below the previous week's 18,868, but 119.29 percent above the year-ago week's 5,013 when there were two production days.

Volvo's new car plant opened Dec. 14 in Halifax, Nova Scotia.

Production in Canada is scheduled to resume Jan. 4.

'87 recalls 3rd highest: 8.9 million

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA recalled 8,857,000 vehicles through Dec. 22 and has termed 1987 "a year of significant highway safety accomplishments."

The affected vehicles were included in 173 separate recall campaigns. Of those, 70.4 percent or 6,237,000 vehicles were influenced by investigations made by NHTSA's Office of Defects Investigation.

Calendar-year 1987 recalls were highlighted by: 3.6 million Ford vehicles to correct a fuel coupler clip; 1.1 million General Motors cars to fix a driver's seat that could tip backwards; three separate recalls of Audi 5000 cars for so-called sudden acceleration; 184,000 Nissan 280-Z and 300-ZX cars for sudden acceleration; and 126,000 Pontiac Fieros for engine compartment fires.

Only twice in the agency's 20-year history has the number of recalls been higher. In 1972, recalls amounted to 11,952,000 because several recalls involved millions of vehicles (3.7 million Volkswagens for a windshield-wiper situation, 4 million Fords with a possible broken plastic grommet in the shoulder belt and more than 1 million Fords with a possible defective steering lock pin).

In 1977, recalls amounted to 12,444,000, again with million-plus campaigns (2.2 million GM cars with possible power brake booster failure, 1.4 million Honda motorcycles for fuel filter caps and 1.3 million Chrysler vehicles for possibly defective accelerator pumps).

NHTSA administrator Diane Steed said the highway fatality rate in the United States is at an all-time low and safety belt use has tripled in recent years, rising from 12 percent to 42 percent. The increase is attributed to the fact that 31 states and the District of Columbia have passed belt-use laws.

In addition, the number of drunk drivers killed in traffic crashes declined 22 percent from 1980 to 1986, NHTSA said.

NHTSA also said that automakers are paying more attention to safety than ever before. More advertise safety and are including safety features voluntarily. These include air bags, anti-lock brakes, safety glass, rear-seat three-point belts and the center high-mounted rear stoplamp before it was required.

OBITUARIES

Emil P. Morock

ALEXANDRIA, La. — Emil P. Morock, 69, former owner of Morock Ford and Morock Lincoln-Mercury dealerships here, died Nov. 24.

Byron D. Brown Sr.

LITTLE ROCK, Ark. — Byron D. "Pete" Brown Sr., 72, retired owner and founder of Brown Ford, Sheridan, Ark., died here Nov. 15. He opened the dealership in 1955 and retired in 1978.

William K. Eggers

RIVERDALE, N.J. — William K. Eggers, retired assistant zone service manager for Buick, White Plains, N.Y. zone, is dead. He worked for Buick from 1947 until August 1987.

Top Idea Olympics award winner, Full Road Runner, climbs hills or stairs on anywhere from four to 10 wheels

TOYOTA TOYS: *Engineers go for fun in annual idea contest*

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Toyota's 12th Idea Olympics featured a human piston, an all-wheel steering vehicle that spins on a row of soccer balls, a candle that burns upside down, and a drawer that opens in four directions.

There was just enough silliness to satisfy the exacting standards of the Toyota Engineering Society, an informal in-house group that oversees the annual affair. Although a number of patents have been taken out on exhibits over the years, the society insists the projects are supposed to be for fun.

The point, according to the group, is to cultivate creativity, but the ideas are not supposed to be too job-related.

The first exhibit in 1977 attracted 175 entries but interest picked up to include 4,648 in 1987.

The top award in 1987 went to the Full Road Runner, a vehicle that climbs hills or stairs on anywhere from four to 10 wheels, and can also lift the body high enough to give the driver an unobstructed view in congested traffic.

New Continental bows as sellout; Premier slower

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford and Chrysler sought to win their way into the hearts and wallets of a shopping-weary America with new-car launches last week. And it appears that they've managed to get some attention.

The two cars — the Lincoln Continental and the Eagle Premier — carry big hopes for the automakers. The Premier, an intermediate sedan inherited from American Motors, arrives as the flagship car in Chrysler's new Jeep-Eagle Division.

The $15,000 (typically equipped) Premier also marks a step into pricier ranks for Chrysler's former AMC dealers, who are used to selling Alliances for less than half that amount.

The 1988 Continental, meanwhile, brings a front-wheel-drive, European-styled luxury sedan into the Lincoln-Mercury lineup. With it, the division hopes to put a dent in the impression that says size, comfort and handling don't mix in an American car. If early signs are any indication, the $26,000 Continental has already won some believers.

Consider these examples:

- Production at Ford's Wixom, Mich., assembly plant is sold out at least until March. Dealers say they've taken as many as 40 orders for the car, even though only a handful have arrived from the factory.
- Jim Stewart, a shoe retailer in the Tampa area, has been leasing a Continental for $350 a month as part of an early evaluation program. Stewart, who currently owns a Mercedes-Benz 560, is "on the verge of ordering" a Continental. A self-described car nut, he proclaims: "When it comes to an American-built automobile, they have probably done the finest job of anybody on the market right now."
- With Continentals selling before they reach the showrooms, dealers are renting the cars themselves just to have something to show customers. L-M put the first 700 Continentals in Budget Rent-A-Car fleets.

"I've been a Lincoln-Mercury dealer for 20 years, and I can't remember ever having a car that people were asking so many questions about prior to seeing it," said William Stalnaker, a dealer in Ocala, Fla.

But the feelings upon first sight haven't all been favorable. A salesman in Dearborn, Mich., reported that reaction to the Continental has been divided evenly between the breathless and the less-than-impressed.

Commerce is bullish: 10.6 million for 1988

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Commerce Department believes sales of new cars and trucks in 1988 are likely to increase by several hundred thousand units from the depressed 1987 level, although sales of North American cars built by the Big 3 will decline by 380,000 units.

The forecast for 1988 — 10.6 million passenger cars and 5 million light trucks — is contained in the Commerce Department's annual report on the economy. The 1987 estimate is 10.3 million cars and 4.8 million light trucks.

The Commerce Department's projections for total vehicle sales in 1988 are higher than most other forecasts.

Latest predictions from the Big 3 are: General Motors, 10.1 million cars and 4.8 million trucks; Ford Motor Co., 10 million cars and 5 million trucks; and Chrysler Corp., 9.5 million cars and 4.7 million trucks. The Big 3 truck estimates are for all sizes, not just light units.

The National Automobile Dealers Association has predicted sales of 9.9 million cars and 4.4 million light trucks in 1988, and several Wall Street analysts also have estimated that 1988 sales will be considerably lower than the Commerce Department's forecast.

The Commerce Department is predicting sales of 6.2 million cars built by traditional North American manufacturers this year, down from the estimated 6.6 million cars they sold in 1987.

Sales of North American-built Japanese cars are expected to increase to 850,000, up from 620,000 in 1987.

The Commerce Department is

Diamond-Star may not be Plymouth-only

LOS ANGELES — A version of the front-wheel-drive sport coupe coming from Diamond-Star, the Chrysler-Mitsubishi joint venture, may be available at Chrysler Motors dealerships other than Plymouth.

Production of the car, now codenamed X2S (Automotive News Dec. 14), is scheduled to start in late 1988, and the car is to go on sale in February or March of 1989.

At the car's public debut at the Greater Los Angeles Auto Show, John D. Withrow, Chrysler Motors executive vice president of product development, said the car will "initially" be sold only by Plymouth dealers. A Chrysler spokesman said it was a possibility that a version of the car will be available to other Chrysler dealers later. He did not elaborate.

Withrow said pricing for the car will range from under $10,000 to under $16,000.

ATV accord halts sale of 3-wheelers

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The government last week reached an agreement with the makers of all-terrain vehicles by filing both a federal suit and a preliminary consent decree. The consent decree is expected to become final in 45 days.

The agreement includes a stipulation that companies must immediately stop selling three-wheelers and buy back those in dealer inventory.

The Justice Department tried unsuccessfully to get Honda, Yamaha, Suzuki and Kawasaki to recall all three-wheelers voluntarily.

The lawsuit tries to keep the door open for eventual repurchase, and the Consumer Product Safety Commission can try to get voluntary repurchase.

The Justice Department believes it does not have the authority to mandate a recall under the legislation governing the commission. Hence, it opted for some immediate relief rather than face long and costly litigation over buyback.

The provisions of the preliminary settlement, which include both three- and four-wheel vehicles, include:

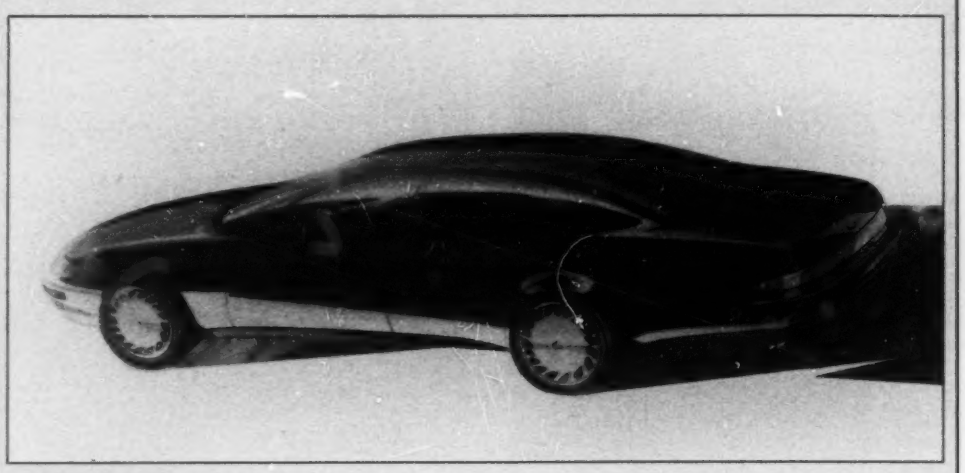
- Company notice to all known ATV owners of the risk involved.
- All U.S. distributors and dealers must display a large warning notice.
- Companies must affix warning labels on all ATVs; must include warnings in owner's manuals; must set up a free hotline to answer consumer questions; must offer free hands-on training to all future ATV buyers and to persons who have purchased them during the past year; must agree to specific advertising guidelines; and must agree to a "massive" public awareness program to inform the public of the minimum age of drivers for ATVs with specific engine sizes.

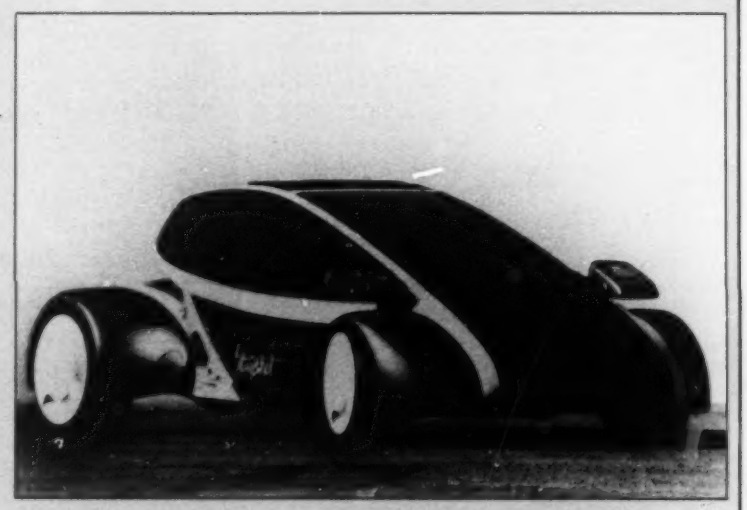
The Consumer Product Safety Commission will work with the industry in setting performance standards for ATVs.

The National Association of Attorneys General will meet this week to consider state actions on requiring helmets and licenses and developing a model law.

Rep. James Florio, D-N.J., chairman of a House subcommittee overseeing the commission, criticized the agreement and promised legislative action soon.

An estimated 2.3 million ATVs are currently in use; about two-thirds are three-wheelers. Between January 1982 and September 1987 more than 900 deaths have been blamed on ATVs.





Peek at L.A. show
Those attending this week's Greater Los Angeles Auto Show have an opportunity to view an artist's rendering of the 1990 Lexus, above, the car that will be offered by Toyota's new luxury division. The four-door sedan will be powered by a V-8 engine featuring multi-valve, multi-cam technology. Also on display at the show is Plymouth's Slingshot, right, a rear-engine concept car that has a carbon fiber chassis and adjustable four-wheel independent suspension.

Job center to help VW workers

State, private group offer training to Westmoreland employees

NEW STANTON, Pa. — The state and a private Westmoreland County group plan to set up a job center to assist Volkswagen plant employees who will lose their jobs later this year.

The center will help people with job searches, retraining, state unemployment compensation and federal assistance, said Frank Mont, deputy secretary of the state Department of Labor.

The department and the Private Industry Council of Westmoreland-Fayette Inc., headquartered in Greensburg, will set up the center in the employees' cafeteria of the New Stanton plant, he said.

"It's a proven fact, the earlier the intervention, the more successful people are in finding work and in jobs that match their standard of living or with only a slight reduction," Mont said.

Volkswagen announced in November that it will close the plant by the end of the 1988 model year because of sagging sales.

Mont said 2,500 employees, who produce 400 cars a day, will lose their jobs. Another 2,500 to 3,000 laid-off workers will be served first at the center.

Some employees will be laid off in April when production of the Jetta is halted, Mont said. The remaining workers will be furloughed in July or early August when production of the Golf ceases.

The state Department of Labor will contribute about $1.4 million to the effort, Mont said, and the Private Industry Council is applying for federal funds from the U.S. Department of Labor.

Volkswagen plans to provide the center with telephones, a WATS line and personal computers linked to the Bureau of Employment Security's computer.

UAW Local 2055 will provide various materials, including a workbook explaining employee benefits and programs, Mont said.

Despite plans for the center, Mont and John Sproull, Private Industry Council finance and operations manager, said they still hope another automaker will take over the 10-year-old plant.

"The state administration is proceeding very actively to find a buyer," Mont said. "We're still planning this while the other activity is going on because this is so time-consuming. But we're still going full steam ahead on trying to develop another employer for the facility."

7 states ask speed hike to 65 on some roads

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Seven states of a possible 20 have applied for federal permission to raise their speed limit to 65 mph for four years on rural, four-lane roads that have the same safety features as the interstate system.

The states are California, Florida, Illinois, Iowa, Kansas, Kentucky and Oklahoma.

Under the spending law passed by Congress before the Christmas recess, 20 states were given the chance, on a first-come, first-served basis, to apply for permission to raise speed limits on eligible roads.

Last April, Congress allowed a 65-mph limit on rural sections of interstate highways.

This latest exception to the national 55-mph speed limit occurred despite the vigorous protests of a number of lawmakers and safety advocates, including Joan Claybrook, former NHTSA administrator, who argued that higher speeds will cause more highway deaths.

At the same time, NHTSA released its latest preliminary data about fatalities on rural interstate highways. Although 27 states had chosen the higher limit before the end of May and 11 others did so later, NHTSA used data from only 22 states which had raised the limit and compared it to seven states that retained the 55-mph limit. The preliminary data showed a 52 percent increase in deaths on those rural sections of the interstate system with a 65-mph speed limit.

However, NHTSA surrounded its data with numerous caveats, saying it has not yet had a chance to analyze other relevant factors such as actual travel speeds, total crash statistics, alcohol involvement, vehicle miles traveled and types of vehicles involved. Deaths on those rural sections of interstate roads account for less than 5 percent of total highway deaths.

Brian O'Neill, president of the Insurance Institute for Highway Safety, called NHTSA's preliminary data "even worse news than we expected."

IIHS also said that in New Mexico — the first state to raise the speed limit on rural interstate highways — the proportion of cars exceeding 70 mph was twice as high in November as in August and four times as high as in April when Congress first allowed breaching the national 55-mph limit.

FRUSTRATION CHASER:

Driver presses a button, zaps road rivals — symbolically

CHARLOTTE, N.C. — Cruising down the freeway at 65 mph, the BMW driver barely avoids a collision with the tractor-trailer that just pulled into his lane.

The BMW driver doesn't curse or make an obscene gesture. Instead, he hits the button on a little black box on his instrument panel. Lights flash, and the driver rakes the truck with several rounds of simulated machine gun fire.

It's the Revenger, a $20 adult toy.

"We began shipping them out in early November," said Mike Grubbs, vice president of Express Yourself Inc., a toymaker in Charlotte. "The department stores are jumping on them."

There are options to the machine gun, Grubbs

said: "He could have blasted the truck with the death ray or my personal favorite, the grenade launcher."

Most buyers have been men in their 20s or 30s who want to "rub out" motorists who cut them off or cause them grief in bumper-to-bumper traffic, Grubbs said.

While some psychologists have said the device sets a poor example for children and could lead to violence, Grubbs said it can have beneficial effects.

The Revenger allows a driver to let out his anger without resorting to dangerous driving or obscenities, he said, and the sound cannot be heard outside the car.

"It's a fun way of dealing with your frustrations," he said.

"Because traffic is so bad in many parts of the country, there's a lot of frustration, and there's a need to reduce anger without the L.A. solution," said David McMahan, designer of the Revenger.

But he said the Revenger was designed before a series of freeway shootings last summer in Southern California.

TOYOTA TOYS

FROM PAGE 1

The All-Wheel Steer car and its soccer ball complement were the contribution of the Vehicle Testing and Research Department at the Higashi-Fuji Center, where most of the company's soccer team is employed.

The Human Piston featured a man peddling away, bobbing up and down inside, as a light indicating sparks flashed overhead. The idea was conceived by an engineer, Hideo Miwa, who wanted to demonstrate how a piston works to his son.

Other projects reflected more wishful thinking, such as the living car, which is a van that can expand into a living room, or the lazy man's fishing car that extends its own lake-side dock.

Although the engineering group keeps insisting on the fun nature of the exercise, there are certainly some productive crossovers. The engineers who produced the Full Road Runner had to learn about bodywork, fiber-reinforced plastics and painting to get their project off the ground.

Some patents were filed on the vehicle, but the governing group for the Idea Olympics does not want to identify them because it wants to downplay any quest for patents.

Six years ago, Takahiro Iwase, a director of the Toyota Engineering Society committee, filed a patent on his exhibit — a protractor that could rapidly determine the percentage of a given angle. But he cannot do anything with the patent because technically it belongs to the society, which refuses to sell or follow up on any patent.

Every year a large percentage of the entries are discarded for being too close to a real job situation. In 1987 there was a suggestion for automating the painting system that draws lines on a factory floor. Such ideas, presumably, are welcome in a suggestion box but not in a contest set up to inspire flexible creativity.

Also in 1987, one entry was labeled 3WS. The model included an extra wheel joined under the body that easily slipped into place in the event of a flat tire. It made the exhibit, but just barely. The vehicle was nearly too close to reality to make it.

Clockwise, from top left: Human Piston, done by an engineer who wanted to demonstrate how a piston works to his son; 3WS includes an extra wheel under the body that slips into place in the event of a flat tire; the living car, a van that can expand into a living room; all-wheel steering vehicle spins on a row of soccer balls

COMMERCE

FROM PAGE 1

anticipating total imported-car sales of 3.5 million vehicles, up from an estimated 3.1 million in 1987.

The increase in imported-car sales is expected to come from non-European producers. European importers are expected to sell 550,000 cars in the United States this year, 10,000 fewer than in 1987.

Japanese manufacturers will sell an estimated 2.4 million imported cars in this country in 1988, up from 2.1 million in 1987, the Commerce Department said. Sales of non-Japanese or non-European imported cars are expected to rise to 420,000 in 1988 from 290,000 in 1987.

"Japanese vehicles are likely to encounter growing sales resistance in 1988 as their prices rise to adjust for the fall of the dollar against the yen," according to a summary of the Commerce Department's projections by the staff of the Office of Automotive Affairs.

It added, "Continued upscale movement by the Japanese manufacturers will provide increased competition for U.S. and European producers. This expansion at the high end of the market could result in additional opportunities for new exporting countries at the low end.

"Further import penetration from new-entrant countries and increased domestic production from foreign-owned plants are expected to reduce traditional domestic vehicle producers' market share."

The Commerce Department forecasts little change in market share for the various segments. It predicts that small passenger vehicles will take 26.3 percent of the 1988 U.S. market compared to 26.4 percent in 1987.

Other market-share estimates are: compact cars, 31.2 percent this year, up from 30.9 percent in 1987; intermediates, 23.9 percent vs. 23.7 percent in 1987; and large/luxury models, 18.6 percent vs. 19.0 percent.

On the truck side, the Automotive Affairs staff said, "With the economy continuing to grow, truck sales are likely to continue to increase about 3 percent. Light-duty trucks and vans seem destined for greater market penetration. The continued market expansion by compact pickups and vans will be at the expense of passenger vehicles and full-sized pickups and vans.

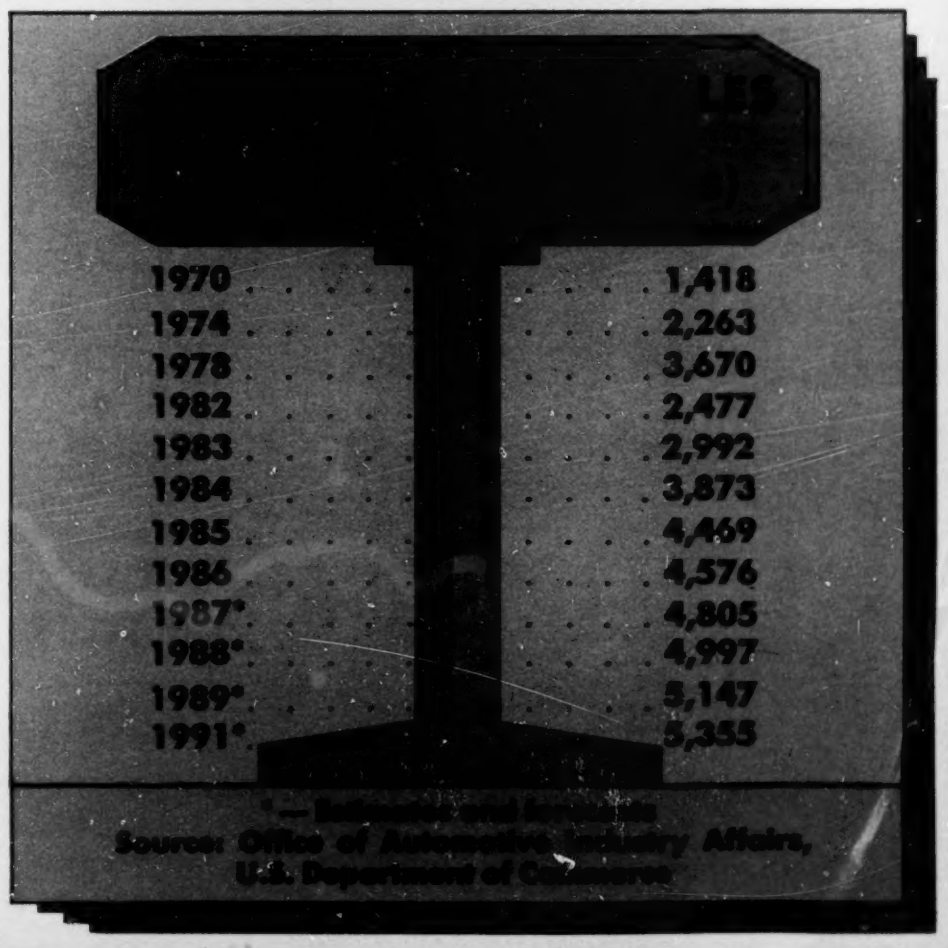
"The market for medium-duty trucks is likely to grow further as new products enter the market and as more businesses come to appreciate the inherent advantages of using these vehicles. Imports now seem firmly entrenched in this market segment, and further efforts to expand market share are inevitable.

"Expansion in the use of Class 7 vehicles where Class 8 vehicles previously reigned supreme is probable. As long as the economy continues to expand, even at a modest rate, Class 8 vehicle sales should remain relatively stable," the forecast said.

The Commerce Department is projecting an increase of about 2 percent in auto parts shipments in 1988 (based on constant dollars) in response to basically healthy overall vehicle sales.

The report warns, however, "The small increase could vanish if domestic Japanese manufacturers make sourcing decisions that exclude U.S.-located firms, or if U.S. parts firms are complacent about exporting."

Copies of the Commerce Department forecast, "U.S. Industrial Outlook 1988," can be obtained by sending $24 to: Superintendent of Documents, Washington, D.C. 20402.



GM plant closings tough on Detroit-area trucking firms

By Bradford Wernle
CRAIN NEWS SERVICE

DETROIT — Truck drivers on their usual holiday layoffs had more to be nervous about at the end of 1987 than in the past. Some of them weren't called back to work in January.

The closing of four General Motors plants in this area will hit some car-hauling companies particularly hard. Each GM plant contracts with only one car-hauling company, said Gerald Bodrie, GM's executive director of logistics operations.

The two companies most affected in the Detroit area will be:

Anchor Motor Freight Inc. in Birmingham, which handled traffic at the Chevrolet-Pontiac-Canada Group's G-car assembly plant in Pontiac. That plant and the companion Flint body plant closed early in December.

Complete Auto Transit Inc. in Bloomfield Hills, which served the Fleetwood and Clark Avenue Cadillac plants. Both plants closed in mid-December.

Tony Kosak, president of Anchor Motor Freight, a division of Cleveland-based Leaseway Transportation Corp., said it's too early to assess the impact. He said about 200 Anchor drivers serve — or served — three GM assembly plants in the Pontiac area. The others are the Orion Township plant and the Fiero plant.

Because Anchor has known about the impending closing for a long time, it has been able to restructure to "take away the sting," Kosak said.

Officials at Complete Auto, a division of Miami-based Ryder System Inc., declined comment on how many drivers might be affected.

Companies transporting parts to GM plants also will feel the pinch.

Robert Duffey II, president of Jones Transfer Inc., based in Detroit and Monroe, Mich., said his company normally lays off about 35 percent of its drivers during the holidays. Jones Transfer delivers automobile parts to GM.

Primarily because of automotive cutbacks, Jones Transfer laid off half of its nearly 1,000 workers in five states during the 1987 holidays.

The closing of the GM plants will cut annual revenues at Jones Transfer about 4 percent, between $2 million and $3 million, Duffey said. The company expects to have about $75 million in sales for 1987, he said. About 60 percent of Jones Transfer's revenues have come from the automobile industry, Duffey said.

Jones has begun to diversify its customer base by opening an air-freight trucking terminal in Romulus, Mich., and hauling goods for companies such as J.C. Penney and Frank's Nursery & Crafts, Duffey said.

Ed Eberle, executive vice president of Earl C. Smith Inc., said about 80 percent of his 200 drivers are usually laid off during the holiday season, primarily because of normal automotive slowdowns. Most of those laid-off drivers are based in Detroit.

Eberle said the GM closings will "certainly result in layoffs and cutbacks" at his company, though he said he could not predict how many workers might be permanently furloughed. Earl C. Smith should have had a break-even 1987 with revenues of about $14 million, he said.

He said increased business from newer GM plants like Detroit-Hamtramck and Orion Township will offset the closings somewhat. Earl C. Smith also is diversifying and is hauling freight for K mart Corp. and other non-automotive companies.

Frank Pearson, president of Express Freight Lines Inc. in Romulus, Mich., said the plant closings won't affect his company's business "one iota."

About three years ago, Express Freight Lines did about 35 percent of its business with American Motors. Another 10 percent came from Chrysler.

Its dependence on the struggling AMC nearly caused Express Freight to close. Pearson was hired in 1984 to shut the company down. Instead, he steered the company toward a more diversified base in general commodities.

Automotive business now accounts for about 2 percent of Express Freight's revenues, Pearson said.

He said the auto industry's price demands on trucking have driven many companies away.

"They've always got other companies standing in line" waiting to pick up the business, Pearson said. "Somewhere down the line, automotive will pay the penalty."

Ron Owens, president of Teamsters Local 299 in Detroit, said companies such as Express Freight are fooling themselves if they think they won't be affected. He predicted that every trucking company in the state will be hit by the plant closings.

Owens said he believes the GM closings will bring on a grave recession.

The closings will have a trickle-down effect, he said: Since plant workers won't be buying goods at grocery stores and elsewhere, other truck traffic will be slowed, too.

"If GM sneezes in this state right here, the economy gets pneumonia," he said.

Owens, whose union represents about 9,500 truck drivers and other workers in Michigan, said the full force of the GM closings won't be known until February or March.

"This thing is going to spread so far around this state, it's going to be like an atomic bomb hit the state," he said.

Owens said union officials have speculated that 500 to 1,000 of the union's members might lose their jobs because of the plant closings.

Shop volume declines after 4 monthly gains

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The Automotive News Service Index declined last October after four months of gains.

Service and parts business at new-car dealerships fell 0.7 percent below the October 1986 figure.

In September, the Service Index increased 5.0 percent over the year-ago month.

Shop business during the first 10 months of 1987 was up 2.6 percent over the same period in 1986.

There was no consensus among dealers on reasons for the October decline although service volume often mirrors car sales, which were down 12 percent in October compared with the year-earlier month.

Among dealers reporting service gains in October, a Northeast Chevrolet merchant said an increase in the labor rate and 1986's high new-vehicle sales volume contributed to his success.

A Northeast Ford dealer said he improved the management and attitude in his service department over the previous year.

And a Midwest Buick-Pontiac dealer said unseasonably low temperatures led to lots of radiator and heater repair business as well as tuneup work.

Shop parts sales (customer paid and warranty) led the business indicators in October with an increase of 2.7 percent over October 1986. Sales of all parts and accessories climbed 1.9 percent, and gross profit on all labor, parts and accessories sales rose 0.9 percent over the year-earlier month.

Repair orders written were down 5.7 percent, and total labor sales (customer paid and warranty) fell 3.4 percent in October.

Parts and accessories sales to off-premises customers rose 1.3 percent.

Gross profit on all labor, parts and accessories sales led the indicators for the first 10 months of 1987 with an increase of 5.4 percent. Sales of all parts and accessories rose 4.7 percent; shop parts sales climbed 3.6 percent; and total labor sales were up 1.7 percent.

Repair orders written fell 2.6 percent.

Parts and accessories sales to off-premises customers were up 5.5 percent for the first 10 months of this 1987 compared with the same period in 1986.

SERVICE INDEX 99.3★

	Oct. '87 vs. Oct. '86	10 mos. '87 vs. 10 mos. '86
Gross Profit on All Labor and P&A Sales	+0.9%	+5.4%
Repair Orders Written	−5.7%	−2.6%
Total Labor Sales (Customer & Warranty)	−3.4%	+1.7%
Shop Parts Sales (Customer & Warranty)	+2.7%	+3.6%
Sales of All P&A	+1.9%	+4.7%

★ Survey by Automotive News shows that dealers' service and parts business in October 1987 was 99.3 percent of business in October 1986. Service business in the first 10 months of 1987 was 102.6 percent of business in the corresponding period in

STAND-IN

Kirk in primaries as Iacocca backer

TALLAHASSEE, Fla. — Former Florida Gov. Claude Kirk announced that he will be a candidate in the Democratic presidential primaries as a stand-in for Chrysler Corp. Chairman Lee Iacocca.

Kirk said he has filed petitions to be placed on the New Hampshire primary ballot and has taken steps to be placed on the Florida ballot.

"We also will move as quickly as possible to qualify in at least 20 states in order to obtain matching federal campaign funds," Kirk said.

In addition, the Maryland secretary of state has placed Iacocca's name on the ballot for the March 8 primary without consulting Iacocca.

A spokesman for the Chrysler chairman said, "Mr. Iacocca has said repeatedly he is not a candidate. That remains his position. He is interested in policies, not politics."

"I know Lee has said he is not interested in running for president," Kirk said.

"But I think I know him well enough that if his country calls, he will respond," he said.

Kirk, who was governor of Florida from 1967 to 1970, said he wants "to go to the Democratic nominating convention with enough delegates to generate a draft for Mr. Iacocca."

Ford tops Chevy in sales war

First win since '57 in non-strike year

By David Versical and Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTERS

Longtime division rivals Ford and Chevrolet are stepping into 1988 giving early signs of another dogfight for the industry sales crown.

For the first time in three decades, though, Ford is beginning a new year as the undisputed champion rather than the challenger.

Ford tallied 2,869,861 car and truck sales for 1987, good enough to top Chevy (2,692,246) for the first time in a non-strike year since 1957. Ford won in 1959 when Chevrolet was crippled by a steel strike; Ford made much of its own steel. And Ford was on top in 1970 when a UAW strike shut General Motors for two months.

Ford boosted its 1987 market share to 13.9 percent on the car side and 29.1 percent on trucks, the company said.

Chevy, though it sold more cars than Ford during the year, gave up market share while recording 218,000 fewer car sales in 1987 than it did the previous year. Its share of the light-truck market fell by more than 1.5 points.

But the division already is charting its counterattack.

"Chevrolet has been and will be a competitive force in the market," said Thomas Staudt, general marketing manager, at GM's grand product display in New York. "One

LANCE GRAVES

GM awaits major pact with China

By Michelle Krebs and Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTERS

General Motors is expected to announce "within weeks" a major deal in China that would ultimately result in production of commercial vehicles, automobiles and components.

The agreement could involve Fuji Heavy Industries, the maker of Subaru cars, a company with which GM has not previously worked.

GM President Robert Stempel said GM is awaiting final approval from the Chinese government. A series of proposals is being examined by the Chinese government.

Meanwhile, in Japan, Fuji said it is conducting a "pre-feasibility study" along with GM and a Chinese company called Second Automobile Works in Sian on the production of small cars in China.

Stempel declined to identify any possible joint-venture partners, saying GM has talked to a number of companies.

The announcement, which may be made later this month, would outline an overall plan, the details of which would be worked out later.

Fuji said the objective of the study is a project that would require the cooperation of all three — GM, Fuji and the Chinese automaker. But Fuji said nothing has been decided on details such as scale, investment levels or dates — or even how the three parties would participate.

Japanese press reports, however, are already offering details, such as an overall project cost of $4.1 billion and a production goal of 300,000 units a year of a 1.5-liter model.

The reports said Fuji would be responsible for the technological end of the project and that GM would provide financial assistance.

Most reports said that the Chinese called GM into the picture. Analysts suggested the Chinese may be looking for a stronger financial package

GM show called good start

Cars, programs applauded at image-boosting event

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — A sampling of the 14,000 guests who attended General Motors' show at the Waldorf-Astoria Hotel last week described the event in a single word: impressive.

But now that it is over, they were quick to add, GM has to produce results.

Most attendees interviewed by Automotive News said the show did what it was designed to do:

It showed off present and future products that are not the look-alikes of GM's recent past. It provided proof that the investment in modernization and technology is paying off. It demonstrated that union-management relations are much improved. It boosted the morale of dealers and employees as well as the confidence of suppliers and some financial analysts.

And perhaps it even elevated GM's public image — an image that has been badly damaged by sagging sales and profits and incidents like the $750 million buyout of Electronic Data Systems founder H. Ross Perot.

One corporate executive attending the black-tie dinner Tuesday for business, government and community leaders said he admired GM for the gutsy effort, particularly in light of the bad press the automaker has received in the past few years.

Ann Knight, auto analyst for Paine Webber Inc., noted that a substantial part of GM's problem has been its image.

"There's a risk that the show will be viewed as an extravaganza or it will be perceived as just fluff with no substance, though I don't think that's true," she said.

GM Chairman Roger B. Smith said the three-day show — the largest exhibit of GM products and technology in the automaker's history — was a report card on the company's progress since his administration took over in 1981 and set a new course.

Pontiac, Olds price their GM10s

Grand Prix is $12,539; Cutlass Supreme tagged at $12,846

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — General Motors has announced prices and special introductory offers on the front-wheel-drive Pontiac Grand Prix and Oldsmobile Cutlass Supreme, the latest versions of the GM10 cars.

GM10 is the automaker's $5 billion program to virtually replace its mid-sized car lines. The Buick Regal, the first of the GM10 cars, bowed last fall. Chevrolet's version, which replaces the Monte Carlo, will be introduced in the middle of the 1989 model year as a 1990 model. The GM10 sedans will begin appearing at the start of the 1990 model year.

J. Michael Losh, Pontiac general manager, said the division has 60,000 dealer orders for the 1988 Grand Prix, which is now on sale nationally. GM's assembly plant in Kansas City, Kan., the only plant producing the Grand Prix, will be able to build 75,000 to 80,000 cars in the remainder of the model year.

The base Grand Prix is priced at $12,539, the up-level Grand Prix LE at $13,239 and the performance-oriented Grand Prix SE at $15,249.

Those prices compare to $11,069 for the rear-wheel-drive 1987 Grand Prix, $11,799 for the 1987 Grand Prix LE and $12,519 for the 1987 Grand Prix Brougham. Pontiac did not have a Grand Prix for sale during the first part of the 1988 model year.

Oldsmobile, however, continued to sell the rwd Cutlass Supreme during the early part of the model year, and increased the prices of the rwd models when they were introduced as 1988s. Production of those cars ended in December. Oldsmobile said the base prices on the new Cutlass Supreme models are lower than the base prices of the 1988 rwd versions though the new ones have more standard equipment. The fwd Cutlass Supreme is on sale now.

The base price on the new fwd Cutlass Supreme Classic is $12,846. That is $317 less than the 1988 rwd Cutlass Supreme Classic.

The base price of the up-level Cutlass Supreme SL is $13,495, which is $500 less than the 1988 Cutlass Supreme Classic Brougham.

But Oldsmobile hiked prices about $1,600 for the limited run of the 1988 rwd Cutlass Supreme. Thus, the base fwd model is $1,307 more than the base 1987 unit, and the SL is $1,117 more than the 1987 rwd Brougham.

Oldsmobile said that on a popularly equipped basis, the new Cutlass Supreme and Cutlass Supreme SL are priced $783 and $1,046, respectively, below comparably equipped 1988 Cutlass Supreme Classic models.

The base price of the top-of-the-line Cutlass Supreme International Series is $15,644.

Oldsmobile expects that the plant in Doraville, Ga. — the only one producing the Oldsmobile GM10 car — will be able to build about 90,000 Cutlass Supremes during the remainder of the model year.

Oldsmobile Cutlass Supremes equipped with air conditioning and assembled by March 2 will feature a $300 savings. Air conditioning is a $775 option.

Customers who buy a Pontiac Grand Prix with any of the three option packages offered will save $300 if they purchase the car before March 3.

Pontiac said the offer is being made in conjunction with the 1988 Grand Prix SE winning the Motor Trend Car of the Year award, announced last week.

Both the Pontiac and Oldsmobile GM10 cars have more standard equipment than their predecessors.

Both are powered by a 2.8-liter engine with multiport fuel injection. Both have four-wheel independent suspension, four-wheel power disc brakes and a stainless steel exhaust system.

The base Oldsmobile Cutlass Supreme has among its standard equipment an AM/FM stereo radio, four-speed automatic transaxle, composite halogen headlamps and tinted glass. An instrument panel cluster features a digital speedometer, trip odometer and electronic analog fuel gauge.

The Cutlass Supreme SL has an upgraded interior with a 55/45 split seat with driver and passenger side recliners, wide body-side moldings, dual outside remote control mirrors, power trunk release and lower body accent color.

The International Series model has, in addition, air conditioning, a touring car suspension system, upgraded Goodyear Eagle GT tires on cast aluminum wheels and a five-speed manual transaxle instead of the four-speed automatic otherwise standard.

The base Pontiac Grand Prix also has an AM/FM stereo as standard equipment. Its instrument cluster includes an electronic digital speedometer and analog fuel gauge.

The LE has, in addition, power windows, split folding front seats with folding armrests, integrated headrests in the rear seats with folding armrests and pass-through access to the trunk as standard equipment.

The Grand Prix SE has additional standard equipment that includes a five-speed Getrag manual transaxle, dual exhaust, up-level Eagle GT tires and a special suspension package.

Chrysler offers $500-$1,000 to Jeep and Eagle buyers

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — On Jan. 20, Chrysler Motors will begin mailing coupons worth $500 to $1,000 on selected Jeep-Eagle models to 2.4 million owners of American Motors, Jeep and Renault vehicles and owners of competitive makes.

The direct-mail program will help launch Chrysler's new Jeep-Eagle Division — formerly AMC-Jeep-Renault — and build traffic for the division's new flagship car, the $15,000 (typically equipped) Eagle Premier sedan.

In addition to the coupon, the mailing will include an eight-page brochure on all the Jeep-Eagle vehicles and a letter from Chrysler Corp. Chairman Lee Iacocca inviting the recipient to visit his or her local dealer. Dealers also may use follow-up postcards provided by Chrysler Motors to contact recipients living in their areas.

Coupons will become valid Feb. 3 and may be used in connection with any other rebate Jeep-Eagle offers during that period, according to dealers. Coupon holders must order vehicles by Feb. 29 or purchase them from dealer stock by April 5.

Buyers with coupons will receive $500 off the price of any 1988 Eagle Medallion wagon or sedan, Eagle Premier, Jeep Comanche and Jeep Cherokee. Coupon holders also will receive $750 off the price of any 1988 Jeep Wagoneer or $1,000 off the price of a 1988 Jeep Grand Wagoneer.

Incentives on leftover 1987 Alliance GTAs will be announced soon, according to Jeep-Eagle dealer sources.

Buick is billing Reatta as a sports car without all the negatives

Buick ready to unveil image-building Reatta

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Buick will officially introduce its two-seat Reatta luxury coupe this week. The division expects big payoffs from the car, though not in terms of high sales volume.

Buick officials are looking to the Reatta, an exclusive Buick product, to shed a halo effect over its other car lines in order to stem the sales slide that has been going on since 1984. The Reatta symbolizes Buick's recently defined image as General Motors' premium American motor car division, second only to Cadillac.

The Reatta will be in dealer showrooms later this month. The price will be announced Friday at the Detroit Auto Show. The car is expected to be priced around $27,000.

"We want this car to have demand that exceeds capacity," said John Dabels, Buick general director of divisional marketing. "We want it to enhance our image. We don't expect high volume."

In fact, volume is estimated at about 5,000 during the 1988 model year, climbing to a maximum of 20,000 in its first full year of production.

Even though the two-seater market has exploded with entries in the past few years, Buick officials are convinced the Reatta will create a new niche in the segment. Buick is billing the Reatta as a sports car without all the negatives associated with a sports car.

During the numerous clinics Buick has conducted since development of the Reatta began in 1979, participants complained that two-seaters are difficult to get in and out of, not roomy enough and uncomfortable because they are so low to the ground.

Reatta, Buick officials claim, eliminates those complaints while retaining a sports-car appearance. Dabels said Reatta has a full-sized trunk that can accommodate two sets of golf clubs or a pair of skis. In addition, it has storage space behind the driver and passenger seats. It also offers a comfortable ride and a higher bench-seat height so the driver doesn't feel like he is riding close to the ground.

Buick expects Reatta to have broad appeal. Clinic participants expressing an interest in the car ranged in age from 23 to 63, Dabels said. Research shows potential Reatta buyers are executives, professionals and managers — both men and women.

Buick plans to expose the car to the public through various, nontraditional means. For example, a Reatta has been on display in the front window of the science museum in Charlotte, N.C. A Reatta will be displayed in an exhibit about an Egyptian pharaoh that Buick is co-sponsoring in Denver.

Dabels said Reatta will require more personal selling than most cars. Dealers will receive special training on how to sell the Reatta before they receive a car for their showroom. Dealers will be encouraged to invite potential buyers into their dealership to test-drive the car. A direct-mail package, containing a cassette explaining the car, will be sent to potential buyers.

Reatta is powered by GM's new 3800 V-6 engine, featuring balance shaft, roller lifters and sequential-port fuel injection paired to a four-speed automatic transmission. The engine develops 165 horsepower. The mileage rating is 19 mpg in the city and 29 mpg on the highway.

Reatta is 182.8 inches long, has a 98.5-inch wheelbase and weighs 3,350 pounds. By comparison, a Riviera is 187.2 inches long, rests on a 108-inch wheelbase and weighs 3,360 pounds.

The Reatta has a long list of standard equipment including anti-lock brakes, Gran Touring suspension and air conditioning. The only options available are a power-operated sunroof and a 16-way adjustable driver's seat.

A convertible version is scheduled for introduction next year.

Industry copes with Pennsylvania spill

PITTSBURGH — The collapse of a storage tank that dumped about one million gallons of diesel fuel into the Monongahela River splashed problems onto some important elements of the auto business.

It has, for example, led to production curtailments, the temporary closing of at least two research centers and corporate headquarters, the shutdown of commercial car washes and the threat of more of the same to come.

Suburbs on the Monongahela and on the Ohio River downstream from this city quickly experienced acute water shortages after the Jan. 2 spill because most of the water they use in households, sanitation sewers, fire department systems and industrial processing comes from the rivers.

As the oil was carried by the current to community after community, the demand for water fanned out into an expanding pattern creating more shortages.

Cleanup efforts and damage assessments continued last Friday. Ashland Oil Co., the tank's owner, the EPA and the U.S. Coast Guard are involved in those tasks, and they say the work may take months.

While industry representatives in the area said the water situation was serious, none termed it critical. Aside from some inconvenience, new-car dealers reported no problems, said Thurman R. Brendinger, executive director of the Pittsburgh Automobile Trade Association.

Mobay Corp. in Robinson Township trimmed the workforce to only the essential — such as computer operations — at its headquarters and research center. The composites supplier kept at work only about 200 of the 1,200 employees normally on the site.

USX Corp.'s USS coke-making in Clairton was curtailed for three days because EPA and Coast Guard pollution-containment equipment restricted movement of barges bringing coal to the plant. The company said customer shipments were not affected. It said process water for its steelmaking was being filtered and used normally.

At Crucible Materials Corp.'s research and development center in Clairton, 80 workers were sent home and the center was shut down temporarily. In Bridgeville, Cytent Specialty Steel Co., a division of Cyclops, closed indefinitely.

SAE, in Warrendale, on the other hand, was taking such mundane water-saving steps as switching to paper plates and cups in its cafeteria.

BOOK REVIEWS

WORLD AUTOMOTIVE DIGEST 1987, Planning Research & Systems PLC; PRS Business Publications, Short Run Press Ltd., Exeter, England. 388 pages; hardcover; $295.

The first edition of a worldwide market yearbook for the automotive industry has been put together by Planning Research & Systems, a London-based business consulting group that specializes in automotive and component research.

A world overview is included along with sections on developments in automotive technology. Profiles of vehicle manufacturers are featured.

Data on car and commercial-vehicle production and registrations is provided. Vehicle component use is covered, and recent technological trends are analyzed. A listing of major component producers and their inter-relationships is another feature.

STAR CARS, Beki Adams, Osprey Publishing Ltd., 27A Floral St., London, England, WC2E 9DP. 128 pages; hardcover; $18.80.

More than 120 color photos of famous cars are compiled in this portfolio for car enthusiasts. Exotic cars featured in films and on television are highlighted, as are unusual cars owned by famous persons.

Star cars that are or were owned by cult figures are in the collection. Some of the more famous cars featured are tributes to their owners. James Dean's Porsche and Elvis Presley's and Steve McQueen's cars are focal points.

There are also cars that are stars. Knight Rider would be nowhere without his car KITT, and how could the Dukes of Hazzard excel at the chase without General Lee? Of course, there is Herbie the Love Bug. And, curses: the Batmobile.

STANDARD CATALOG OF AMERICAN CARS 1946-1975, John A. Gunnell, editor; Krause Publications, 700 E. State St., Iola, Wis.; 800 pages; softcover, $24.95.

A one-volume library of postwar cars has been compiled to provide the collector or enthusiast with facts about thousands of cars built in the 30 years following World War II.

Each entry features a description of the car, specifications, historical footnotes and appraised value. There are more than 1,500 photos, and even low-volume cars like Airscoot to Yenko are included.

Sixteen experts were consulted to compile data for this catalog.

HOW TO OUTSMART THE NEW-CAR SALESMAN, Gary Carr, Collier Books, MacMillan Publishing Co., 866 Third Ave., New York, N.Y. 141 pages; softcover; $6.95.

Buying a car and negotiating the best deal is the subject of this guide for consumers and for automotive salespeople. The book begins with "straight talk" about the auto business from a car salesman.

Chapters include tips on how to be prepared before visiting a car dealership and how to take control of your sale as well as how to avoid certain known pitfalls connnected with a used-car purchase. A glossary of car jargon and how to use it is included. Terms like APR, buying down interest rates and the flip or the grape are defined.

THE CAR BUYER'S ART, Darrell Parrish, Book Express, P.O. Box 1249, Bellflower, CA 90706. 183 pages; softcover; $7.95.

A step-by-step guide on how to shop for a used car has been written by a former car salesman who teaches the art of buying a car at colleges and to corporations.

The book could be useful for anyone considering buying a used car as well as for people in the business of selling vehicles. The author explains why it's vital to shop and buy on different days and why a buyer should shop with someone rather than alone.

A profile of a car salesman, a dealership and its management are featured. There is a brief sketch of the marketplace, and there is a chapter that explains financing and contracts. The author steers consumers away from private sellers or car rental companies and suggests that prospective buyers go to new-car dealers.

CREDIT LIFE AND DISABILITY INSURANCE, Gary Fagg, CLICO Management Inc., 11801 N. Tatum Blvd., Suite 246, Phoenix, AZ 85028. 565 pages; hardcover; $40.

This book provides a review of credit insurance and could be a useful guide for financial institutions, actuaries, accountants, attorneys and persons in the auto industry. It gives a history of the industry and talks about regulation, consumer attitudes and claim costs.

Appendices include breakdowns of data on regulatory requirements regarding rates, compensation and loss ratios. There's also a glossary of insurance terms.

It should be helpful for anyone working with sales, marketing, claims, administration actuarial accounting or taxes.

JEEP: MECHANICAL MULE TO PEOPLE'S PLAYTHING, Henry Rasmussen, Motorbooks International; P.O. Box 2 -Rev, 729 Prospect Ave., Osceola, WI 54020. 128 pages; hardcover; $24.95.

A profile of the Jeep in pictures and words has been compiled by photographer Henry Rasmussen. The book features 80 color photos of the original Willys, military Jeeps and first civilian Jeeps. It also includes off-the-road vehicles and racers.

MACK: BULLDOG OF THE AMERICAN HIGHWAY, HENRY RASMUSSEN, MOTORBOOKS INTERNATIONAL: P.O. Box 2-Rev, 729 Prospect Ave., Osceola, WI 54020. 128 pages; hardcover; $24.95.

Henry Rasmussen has captured the Mack truck on film and compiled 80 color photos to highlight the truck's history. Restored vintage Macks, modern trucks, conventionals, cabovers, Macks on the road and at rest and in roadside graveyards are featured.

AERODYNAMICS OF ROAD VEHICLES, edited by Wolf-Heinrich Hucho, Butterworths, University Press, Cambridge, England. 566 pages; hardcover. Distributed in North America by SAE, Dept. 676, 400 Commonwealth Drive, Warrendale, Pa. $60.

A short course on the aerodyamics of passenger cars, light vans, commercial vehicles, sports cars and race cars is provided in this detailed text edited by a former research and development executive for Volkswagen AG.

It should be useful for vehicle engineers. The book focuses on: fundamentals of fluid mechanics, experimental results presented as ground rules of fluid mechanics, and design strategies showing how results can be combined to provide general solutions.

Accident tab $74 billion, NHTSA says

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — NHTSA has estimated that motor-vehicle crashes cost Americans more than $74 billion in 1986. The crashes resulted in more than 46,000 deaths, 3.4 million injuries and 45 million damaged vehicles during the year.

The safety agency said the numbers mean that motorists not involved in collisions during 1986 paid an estimated $97 each in related insurance costs.

NHTSA Administrator Diane Steed said, "Nearly $60 billion of the economic loss could be saved if crashes, injuries and deaths were reduced. If we can continue to increase safety belt use, enforce posted speed limits and crack down on drunk driving, we can go a long way toward ending this drain on our financial resources as well as preventing human tragedies."

Steed said that more than 90 percent of 1986's traffic accidents involved no personal injury, but accounted for most of the $27 billion in property damage — the largest single factor of the total cost.

In crashes causing injury and death, the costs were $16.4 billion in economic productivity, $4.1 billion in medical expense and $3.8 billion in attorney's fees and other court costs.

NHTSA broke down the cost of motor-vehicle accidents in 1986 this way:

Category	Cost (billions)	Share (pct.)
Property losses	$27.37	36.9
Insurance expense	$20.86	28.1
Productivity losses	$16.38	22.1
Legal & court costs	$ 4.32	5.8
Medical costs	$ 4.12	5.6
Emergency costs	$ 0.70	0.9
Other	$ 0.45	0.6
TOTAL	$74.20	100.0

Toyota adding port facilities

BALTIMORE — Whiting-Turner Contracting Co., Baltimore, has designed and is building a $13.1 million marine terminal and new-car processing center here for Toyota Motor Sales U.S.A.

The Maryland Port Administration said Whiting-Turner is constructing the facility on a 51-acre site. The project is scheduled to be completed by Aug. 31.

The facility will incorporate a first-of-its-kind production line for the installation of optional accessories at the port, the port administration said.

Toyota will operate the terminal under a 15-year lease as its primary point of entry in the mid-Atlantic area. The company currently moves about 90,000 vehicles through Baltimore each year.

Audi in Trans Am series

TROY, Mich. — Audi of America this year will take part for the first time in the Sports Car Club of America Trans Am series. Drivers Hurley H. Haywood, Walter Roehrl and Hans-Joachim Stuck will pilot two Audi Quattros.

FROM COVER PAGE

of consumer confidence than we have observed to date."

He assigns a recession scenario a 20 percent to 25 percent possibility. Even if it were to occur, he said, it would be milder than the past two recessions because it would not be accompanied by an oil-price shock as the last two were.

At worst, Eads said, 1988 auto sales would drop 1.5 million to 2 million units below 1987 levels in a recession.

Chrysler economist Donald Hilty said the company's grimmest scenario for falling vehicle sales and a recession this year most likely would result only from a "shock" to the economy caused by either a dramatic increase in the price of oil or interest rates.

Although Chrysler has an "average recession" scenario of 9.0 million cars and 4.4 million trucks (13.4 million total), Hilty does not believe there will be a recession this year. However, he does believe a recession is on the way.

"I join those who think that maybe 1989 is the soft year," Hilty said. "The elections will be over. Modern politicians seem to like to take their recessions early in their term, so a new administration might say, 'Let's get rid of some of the imbalances in the economy, and let's do it early rather than late; so let's get it over with now.' "

Martin Zimmerman, Ford economics director and chief economist, is not anticipating a recession at this time.

"The big development, of course, is the stock market decline, but as we analyze it, there were some important offsetting events that I think will prevent the U.S. economy from going into a recession," Zimmerman said.

Among those key offsetting occurrences, he cited lower interest rates following Black Monday, and the decline in the value of the dollar, which helps U.S. exports and provides a stimulus to the economy.

At the other end of the spectrum, the Big 3 economists say the 1988 economy could turn out to be more robust than they are predicting, and vehicle sales could be a half million or more units higher than expected.

However, the economists give that scenario an even less likely possibility than a recession.

The most likely economic scenario for 1988 is one agreed upon by all of the Big 3 economists, with some variations.

It calls for slow U.S. economic growth (gross national product), inflation (consumer price index) running at about the same level as 1987, the unemployment rate remaining stable and the U.S. dollar continuing to depreciate.

The economists predict U.S. economic growth in 1988, as measured by the GNP, will run at 1 percent to 2 percent. That compares to about 3 percent in 1987.

That slower-growth economic scenario indicates that inflation, as measured by the CPI, will remain in check somewhere between 4 percent and 5 percent, the economists forecast.

The Big 3 economists agree they will have to keep a close watch on consumer confidence throughout the year.

They predict that 1988 consumer attitudes will not be at the peak levels of 1987, but will stay steady at present levels. They admit that consumer confidence was not damaged as badly as they thought it would be following the October stock-market collapse.

Chrysler measures consumer confidence through a combination of the University of Michigan survey and the Conference Board survey. Despite recent drops, Hilty said, it appears a quick recovery in consumer confidence is possible.

He added that consumer responses about this not being a good time to purchase a new car could be nothing more than "post-incentive realism."

Hilty believes the key to success or failure of the U.S. economy in 1988 will be the "wealth factor," as measured by various indices of financial market activity and how individual consumers react to it.

GM economist Eads finds reason for optimism relating to consumer attitudes in the fact that they did not deteriorate as much as they might have following the Oct. 19 experience.

"Consumers have come through that one initial shock in remarkably good shape," Eads said. "There clearly has been a reduction (in confidence). But if you look at what we think it would take to have a very serious impact, the reduction has been small."

However, Eads warned, future levels of consumer confidence will depend on how people perceive the continual drop in the U.S. dollar and the efforts to reduce the federal budget deficit.

Like all economists and business leaders, the Big 3 economists are concerned about the the long-term effects of the trade deficit and the federal budget deficit, as well as the need to reverse or correct the problems.

In that regard, Hilty said he believes the Oct. 19 stock market crash may have been a positive factor because "it got people's attention" directed at those problems.

Hilty said it has taken the United States eight years to get this deeply into the trade deficit and budget mess, and that he believes it will take more than just a couple of years to get out of it. He said the best way to make progress is to become more competitive, otherwise the nation will have to lower its standard of living, "inflate its way out it," sell land and other assets or renege on its debt.

Ford's Zimmerman is not only able to see some good in the stock market crash, but he also sees something positive, albeit symbolic, in the short-term budget-deficit agreement recently hammered out by Congress and the Reagan administration.

"Given the decline in the (stock) market, the concern about the weakening in the economy and concerns about the loss of confidence by the consumer, I didn't think this was the time to totally eliminate the deficit," Zimmerman said. But the $30 billion reduction is OK. It's not going to be too contractionary for the economy."

Zimmerman concedes there was "a certain element of smoke and mirrors" in the form of asset sales and one-time gains in the agreement that left less than $30 billion in long-term deficit reduction.

"What was important was the symbolism of the whole thing," he said. "There was this fear that we were leadership-dead, that they couldn't get any package out of Washington. The fact that they came kicking and screaming to the table and fashioned an agreement that really nobody likes — that's good."

Eads, who served on President Carter's Council of Economic Advisers, is less optimistic. He believes the Reagan administration and Congress missed a golden opportunity to reduce the deficit.

The GM economist calculates that the $30 billion deficit-cutting package will amount to only about half of that in true cuts, which will not be particularly meaningful.

'87 sales off 7% at 15.2 million; trucks set record, cars decline

By Joseph Bohn and Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTERS

In spite of Wall Street's Oct. 19 market crash and a late-year slowdown in car incentives, 1987 turned out to be the fourth best sales year in the past decade.

"We were pleasantly surprised by the buoyancy in spite of the crash and weakening economic fundamentals. The whole market seems to be a lot stronger" than anticipated, said Jack V. Kirnan, analyst with Kidder, Peabody & Co., New York.

"There seems to be no panic out there. We were slightly surprised by the strength of sales," agreed Ann Knight, PaineWebber first vice president.

Total vehicle sales in the United States in calendar 1987 were 15,182,071, including an estimate of 287,000 for medium and heavy truck sales.

That represented a 6.98 percent decline from 16,320,840 vehicles sold in calendar 1986.

The 84,644-unit increase in sales of light, medium and heavy trucks helped offset a 10.68 percent decline in the sales of U.S.-built and imported cars during the year.

Trucks set a sales record last year and accounted for 32.64 percent of total vehicle sales, up from a 29.84-percent market share in 1986, reflecting the continued crossover of car buyers into the truck market.

Kirnan predicted the light-truck segment will continue growing because "these vehicles appeal to the 25- to 44-year-old market which is expected to grow two times faster than the overall population in the 1990s."

New domestic and imported car sales in the calendar year fell 10.68 percent to 10,226,588 from a record 11,450,001 sold in calendar 1986.

New-truck sales reached an estimated 4,955,483, up 1.74 percent from 4,870,839 in 1986.

Actual light-truck sales were a record 4,668,483, up 1.38 percent from 1986's 4,604,837. Estimated medium and heavy truck sales of 287,000 were up from 266,002 in calendar 1986. Actual figures are expected to be available this week.

Sales of imported cars slipped a mere 2.78 percent despite price hikes resulting from a sharp drop in the dollar against foreign currencies.

The weak dollar, though, began hitting German luxury cars, such as BMW, Mercedes-Benz and Porsche, fairly hard in the third quarter, though the European car sales managed to remain on a fairly even keel for the year. Import-car sales dropped to 3,145,326 units, down from 3,235,343 in calendar 1986. Importers retailed 2,836,973 cars in 1985.

Sales of domestically produced cars fell 13.80 percent in calendar 1987 from the year earlier.

The eight U.S. carmakers retailed 7,081,262 cars compared with 8,214,658 in 1986.

Only Honda, Nissan and Toyota

SALES

reported increases in sales of their U.S.-built cars.

The five foreign-based car manufacturers retailed 174,842 more domestically produced cars in 1987 than the year earlier.

Here are the 10 top-selling vehicles for 1987:

1. Ford F-Series, 550,125.
2. Chevrolet full-sized pickup, 418,221.
3. Ford Escort, 392,360.
4. Ford Taurus, 354,971.
5. Honda Accord, 334,876.
6. Chevrolet Cavalier, 307,028.
7. Chevrolet Celebrity, 306,480.
8. Ford Ranger, 305,295.
9. Hyundai Excel, 263,610.
10. Toyota pickup, 252,946.

Ford Motor Co. outpaced GM and Chrysler by showing an increase in combined car and truck sales for 1987 and by increasing its share of the the total vehicle market.

However, Ford Motor's sales of U.S.-built cars slipped 2.26 percent to 2,019,783 down from 2,066,507 units in 1986, a decline offset by higher truck sales.

Ford Division's full-sized F-series pickups again topped the list of best-selling nameplates, with 550,125 sales. Its Escort, with 392,360 sales, ranked third, and its Taurus, with 354,971 sales, was fourth. The Ford Ranger, with 305,295 sales, ranked eighth.

Ford Division outsold Chevrolet in total vehicle sales, with 2,869,861 compared to Chevrolet's 2,692,246.

Chevrolet's full-sized pickups ranked second among best-selling nameplates, with 418,221 sales. Its Cavalier ranked sixth with 307,028 sales and its Celebrity was seventh with 306,480 sales.

GM's year-end car sales dropped nearly a million units to 3,555,538, down 21.56 percent from last year's 4,532,798.

Although GM remains the sales leader in the car market, its car market share dropped to 36.46 percent from a 40.99 percent share in 1986.

Chevrolet's Corsica/Beretta was the only new car line to garner a spot in the 20 top-selling nameplates. It ranked 16th.

In 1987, import-car makers seized almost a third of the total U.S. car market, although total import-car sales dropped from 3,235,346 to 3,145,326 in 1987.

Though import-car makers sold 90,017 fewer cars in the calendar year, Honda's Accord ranked fifth among best-selling nameplates and its Civic ranked 14th. The Hyundai Excel ranked ninth and Nissan Sentra was 12th.

Of the Big 3 U.S.-based carmakers, only Ford gained a larger part of the market and sold almost as many cars as in the previous year. Ford's share rose from 18.18 percent last year to 20.15 percent in 1987.

Chrysler's car share dropped to 10.72 percent, down from 12.10 percent in calendar 1986. All Big 3 shares include their captive imports.

The Japanese-branded car lines took 23.36 percent of total U.S. car sales, up from 20.71 percent in 1986. European carmakers held on to 6.26 percent of U.S. car sales in 1987, compared with 6.23 percent the previous year. Korea's Hyundai took 3.05 percent of U.S. car sales, up from 1.79 percent in 1986.

There were 307 selling days in each calendar year. Last year's auto daily selling rate was 33,311, compared with 1986's 37,296 daily selling rate.

Among light-truck manufacturers, Ford, Chrysler, GMC and Jeep all scored increases, the latter three setting records.

Chevrolet and most importers, excluding Mitsubishi, Suzuki and Ranger Rover, saw a decline in their light-truck sales in 1987.

Ford, the light-duty-truck sales leader, retailed 1,398,969 units, up 5.59 percent from 1986. Chevrolet retailed 1,173,675 light duties, off 4.54 percent from 1986.

Chrysler's Plymouth and Dodge truck sales of 708,125 were up 18.78 percent, while GMC's sales of 311,217 light duties showed a 1.51 percent increase.

Jeep sales of 208,440 barely edged out the 207,514 retailed in 1986.

The light-duty-truck importers, with 868,057 sales, had a 7.68-percent decline from the year earlier's 940,262 sales.

In December, car sales fell to 839,775, a drop of 15.39 percent from a year ago when 992,578 cars were delivered. Domestic car manufacturers sold 550,676 cars, down 18.9 percent from 673,078 a year earlier. The import total also dipped. Import-car sales were 289,099, down 9.52 percent from 319,500 last year. However, import carmakers took over a third of December's total car sales.

Rewey and victory cake

SALES WAR

FROM PAGE 1

year does not make a trend."

General Manager Robert Burger predicted Chevrolet would reclaim as much as a full percentage point of the car market in 1988 and three or four percentage points of the truck market.

And while he stopped short of saying Chevy would limit Ford's reign to a single year, he vowed to "cut the deficit by a lot."

As an early step, Chevrolet trimmed truck prices by an average of $200 from the tentative prices announced earlier this model year. Included in the price cuts are its new full-size C/K series and the S-10 pickup and Blazer models. In addition, Chevrolet has boosted its truck advertising budget in the 1988 model year to nearly half of the total ad budget. Much of that advertising will be aimed squarely at Ford.

The division also is planning to bring attention to niche truck products, particularly those built off the C/K platform such as the Sportside 4x4 pickup. That model was named Four Wheeler of the Year by Four Wheeler magazine.

In the car lineup, Chevrolet is expecting to pull gains from a full year of production of the Corsica and Beretta and improved sales from the restyled Cavalier.

Meanwhile, Robert Rewey, Ford Division general manager, last week stood beside an oversized five-foot victory cake, reminded Detroit employees of the challenges in the marketplace and then excused the celebration by quoting baseball legend Dizzy Dean: "If you can do it, you ain't braggin'."

For 1988, the division will shoot for an additional percentage point of market share — 15 percent for cars and 30 percent for trucks.

Ford will reach its goals largely on the strength of the Festiva and the new Probe, Rewey said. The Festiva will be available for a full year and contribute about 85,000 sales. The Probe, a sporty 2+2 built in the United States by Mazda, is expected to bring 70,000 sales between its May introduction and the end of the year.

For the time being, at least, Rewey doesn't foresee much of a threat from the new GM10 models. The cars are arriving initially as two-door models, so they won't compete directly with the industry's second-best-selling car, the four-door Taurus. And he predicted that the redesigned Thunderbird, due this fall, will do nothing less than hold its own.

On the truck side, improved availability of the Ranger will contribute to a stronger performance in 1988, Rewey said.

As for another sales championship, Rewey noted that Ford has already built up a 77,000-unit lead over Chevy in the first quarter of the 1988 model year.

For first time, domestics slice import truck share

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Domestic light-truck manufacturers regained market share from the imports for the first time in 1987, an historic turn of events and one that some analysts expect to continue.

The turning point is particularly significant since it occurred as truck sales have been growing while the auto market is on the ebb.

Calendar 1987 light-truck sales were a record 4,668,483, up 1.38 percent from the previous year's 4,604,837.

Of that total, domestic companies accounted for 3,800,426 sales, up 3.71 percent from 1986, while foreign companies' sales of 868,057 light trucks were off 7.68 percent.

The domestic companies picked up 1.83 percentage points of market share, accounting for 81.41 percent of the light-truck market. Foreign companies' share dropped to 18.59 percent from 20.42 percent in calendar 1986.

As Gerry Paul, an analyst with Sanford C. Bernstein, New York, pointed out, domestics not only picked up share, they also picked up volume.

"In a market that was up year-to-year, the imports' volume was down. It happened particularly in the fourth quarter," he said.

He added, "This (trucks) is the first place you see the pressure of currency change appear because imports have to pay a 25-percent duty on trucks that they're not paying on cars."

He expects the trend to continue because "I don't think they've (imports) passed along all the costs resulting from the currency changes. There's more evidence of the pressure they're under from the fact that Nissan moved all production of trucks to Smyrna. They're no longer importing trucks."

David Healy, an analyst with Drexel Burnham Lambert, New York, largely concurred, noting that "there's a lot of very aggressive price competition in light trucks, which developed as the dollar weakened and U.S. companies were able to price more aggressively against the Japanese."

He also pointed to the 25-percent duty on imported trucks and said he felt the market has not yet fully reflected the "big decline in the dollar relative to the yen."

"I think the weakness of the dollar really made some Japanese trucks an unprofitable business," Healy concluded.

Wendy Beale, an analyst with Smith Barney, Harris Upham & Co., New York, traced some of the imports' softness to the "uncertainty over whether multipurpose vehicles will be counted as cars or as trucks and the implicit threat of dumping litigation."

"If MPVs are counted as cars rather than as trucks, then they will be included in each importer's car quota and will substantially reduce the number of passenger cars that each automaker can import for the remainder of the quota year," she added.

"Dumping litigation is never far offstage these days, with the dollar on its downward slide. Suits were prepared earlier this year, forcing Japanese truck makers to raise prices. In this very competitive market, protected by a 25-percent import tariff, Japanese truck manufacturers do not have much of a cost advantage any more," she concluded.

Generally, domestics appear inclined to maintain their aggressive posture, based on incentives on small pickups the past couple of months.

4th-quarter car output trails '86

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers produced 1,737,806 cars in last year's fourth quarter, 29.70 percent more than the third-quarter total of 1,339,881 but 8.71 percent below the 1,903,517 built in the final quarter of 1986.

December's car production of 482,622 dipped 17.29 percent from November's 583,503 and declined 17.44 percent from the the year-ago month's 584,548.

Returning to work after the holiday, automakers opened 1988 with scheduled output of 114,927 cars last week, 18.24 percent below the year-ago week's 140,567.

Last week's targeted output was shared as follows: General Motors, 45.10 percent; Ford Motor Co., 34.54 percent; Chrysler Motors, 10.18 percent; Honda of America Manufacturing Inc., 5.62 percent; New United Motor Manufacturing Inc., 2.83 percent; Nissan Motor Manufacturing Co. U.S.A., 1.17 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.56 percent.

Volkswagen of America's Westmoreland, Pa., plant remains idle for inventory adjustment. The plant is expected to resume output Jan. 18.

GM's Tarrytown, N.Y., plant is closed until Feb. 1 for renovation of the paint shop.

GM's Fiero plant in Pontiac, Mich., is idle for inventory adjustment until Jan. 25. When the plant reopens, the line speed will be reduced from 30 units per hour to 15 units per hour. About 425 workers will be permanently laid off.

GM's Van Nuys, Calif., plant remains closed until Jan. 18 for inventory adjustment. One shift will be discontinued temporarily on Feb. 1, also to reduce bloated inventories.

GM's Lakewood, Ga., plant resumed output today after being idle for one week because of slow sales.

Chrysler's St. Louis plant was closed last week for inventory adjustment.

Overtime was scheduled last Saturday at Ford's Wixom, Mich., plant. Ford has slated daily overtime this week at its plants in Lorain, Ohio; Dearborn, Mich.; Wixom, Mich.; Wayne, Mich.; and Kansas City, Mo.

Truck production sets record in Canada

Canadian truckmakers built 214,699 units in the fourth quarter, the highest ever for that period. The former peak was 203,820 in the fourth quarter of 1985.

The fourth quarter's truck output was 30.38 percent more than the third quarter's 164,673 and 42.92 percent more than the year-earlier period's 150,226.

December truck production of 64,554 was 12.48 percent below November's 73,755 but 35.95 percent more than the year-ago month's 47,483.

Last week's targeted output of 17,078 trucks was 7.45 percent more than the year-ago week's 15,894.

Car production during the fourth quarter totaled 241,316, 87.20 percent more than the third quarter's 128,910 but 17.14 percent below the year-ago quarter's 291,237.

Last month's production of 73,127 cars dipped 19.05 percent from November's 90,338 and declined 12.96 percent from the year-ago month's 84,018.

Carmakers scheduled 22,851 units last week, 35.90 percent more than the year-ago week's 16,815.

Chrysler Motors' Pillette Road plant in Windsor, Ontario, was idle last week for inventory adjustment.

Truck build rises for quarter

Domestic truck output for the fourth quarter was 969,674, the highest for any fourth quarter since 1978 when 980,442 trucks were assembled.

For the three-month span, output was 7.31 percent more than the third quarter's 903,660 and 18.58 percent above the year-ago quarter's 817,721.

December's production of 285,458 trucks was the highest ever for that month. The previous record was 276,248 in December 1978.

Last month's output was 9.32 percent below November's 314,808 but 12.33 percent more than the year-ago month's 254,121.

Scheduled production of 78,245 trucks last week was 5.25 percent more than the year-ago week's 74,342.

General Motors' Pontiac West plant in Pontiac, Mich., remains idle until Jan. 18 for inventory adjustment.

All Ford plants are scheduled for daily overtime this week.

Continental to have bags

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — In what apparently will be a first for a domestic manufacturer, Ford Motor Co. will make both driver- and passenger-side air bags standard on the 1989 Lincoln Continental.

Company sources and suppliers confirmed that the dual system will appear on next year's model. Currently, driver-side air bags are available as options on the Ford Tempo and Mercury Topaz.

The move comes after Ford successfully petitioned NHTSA last year for a four-year delay in a rule that would have required automakers to install passenger-side passive restraints on all 1990 models.

The company had argued that the extension would give it more time to develop its preferred form of protection — air bags — instead of using automatic seat belts.

Ford had said earlier that it expected to have the dual air bags in one 1989 model and at least 500,000 driver-side bags in its vehicles by 1990.

"We have to go to passive restraints in one form or another," said one source. "It's easier to make an air bag standard on luxury vehicles."

He explained that the cost of the system will be more easily absorbed in the $26,000 Continental than in a lower-priced model.

While all supplier costs haven't come in yet, the source estimated that the the system wouldn't contribute more than $1,000 to the retail price of the car.

Ford has delivered about 21,000 Tempos and Topazes with the single-air-bag option, and a "vast majority" of those have gone to fleet buyers, a spokesman said.

Japanese upgrade warranties

Mazda, Mitsubishi, Toyota lead way

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Mazda and Toyota fired the first shots and Mitsubishi recently entered the fray in what may become the 1988 version of warranty wars, Japanese style.

Last year, the domestic manufacturers played a game of warranty one-upmanship and introduced six- and seven-year powertrain warranties.

At the start of the 1988 model year, Mazda introduced a three-year/50,000-mile bumper-to-bumper vehicle warranty, and Toyota adopted a three-year/36,000-mile comprehensive car warranty.

In the last month, Mitsubishi announced to its dealers that it will offer a three-year/36,000-mile comprehensive warranty on all Mitsubishi-built cars and trucks. The Hyundai-built Mitsubishi Precis is covered by a separate warranty.

Before 1988, Japanese manufacturers favored comprehensive one-year warranties with an additional two to three years of powertrain coverage and three to five years of corrosion protection.

The major exception was Honda's Acura line, which offered a three-year/36,000-mile comprehensive vehicle warranty along the lines of the European manufacturers with which it competes. Other Japanese manufacturers seem to be following the European model.

Japanese manufacturers are offering longer warranties because "they are trying to find a merchandising advantage or to be competitive with domestic manufacturers' warranties," said George Peterson, president of AutoPacific Group, an auto product marketing and consulting firm in Newport Beach, Calif.

Also, with the cost of Japanese cars rising as a result of the weakened dollar, a longer warranty allows Japanese manufacturers to add value to their vehicles at a low cost.

"As Japanese prices go up, the consumer who might have gone directly to a Japanese maker will cross-shop. Warranty is an advantage, and the dealers are trained to use it," Peterson said.

Japanese manufacturers favor extended complete-vehicle warranties because research indicates consumers like them more than extended powertrain coverage, according to Peterson.

But domestic manufacturers are unlikely to compete head-on with

ROGER PENSKE

Multi-talented entrepreneur just keeps on growing

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Just two weeks into the new year, Roger Penske has brought his scalpel to General Motors' faltering Detroit Diesel subsidiary, unveiled an $18 million state-of-the art retailing facility at the country's largest Toyota dealer, and replaced the familiar Potamkin Cadillac name with Penske signs in New York City.

As Roger Penske — racer, retailer, entrepreneur, super manager — works to digest it all, some wonder if he has attempted too much too fast. Penske doesn't stop long enough to think about it.

It was just two years ago that Penske, better known as a racing guru than businessman, acquired Longo Toyota in California and the heavy-duty truck leasing business of Leaseway Transportation. Last year he added the high-volume Potamkin Cadillac stores in Manhattan and his biggest property yet — 60 percent of the $900 million Detroit Diesel Corp. — a move that takes Penske from his retailing roots into basic manufacturing.

Through it all, Penske is betting that he can do what large bureaucracies couldn't with a lean and mean approach — the leading edge in management today and what Penske contends America needs to regain a competitive advantage over foreign firms.

"The common theme that he (Penske) brings to his businesses is that he runs them effectively," said Roger Vincent, managing director and head of the client group for Bankers Trust. "It is very much a part of the development of corporate America of the future — reducing central staff and the bureaucracy. We are moving into an environment where businesses are getting leaner."

In Detroit last week, Penske himself mused, "For the next 12 months the focus of the company will be to digest the businesses that we have at this point and then review our position going into 1989."

But he added a warning: "We are not going to stay stagnant from the standpoint of growth if there is an economic opportunity."

"I didn't buy this business (Detroit Diesel) to sell it," he added. "We bought the business to grow it. It's going to take a lot of long hours from a lot of people. There's a lot of selling that has to be done."

What lies behind the Penske push?

The central philosophy of the organization is to maximize performance, whether in racing or the boardroom. Penske uses joint ventures to operate in the big leagues, while relying on a handful of key players to get the job done.

Japanese, Hyundai face price probes

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Hyundai Motor Co. of Korea and several Japanese light-truck manufacturers could face heavy U.S. tariffs if General Motors and the U.S. Commerce Department pursue and prove anti-dumping cases against them.

News that both cases are being actively considered came last week as Sen. John Danforth, D-Mo., released a letter to Noboru Takeshita, prime minister of Japan, accusing Japanese automakers of dumping.

The letter was timed to coincide with Takeshita's visit to Washington, but came after several charges that foreign automakers have not raised prices to keep pace with the falling dollar.

If the anti-dumping cases are brought, and if they prove successful, the charges would result in the imposition of penalty tariffs against Japanese and Korean automakers, designed to raise the U.S. prices of their imports.

The Commerce Department case would charge Japanese light-truck manufacturers with selling their products in the United States at prices below the cost of production, according to Washington trade attorneys. The case would be supported by a cost and pricing study of Japanese light trucks now being prepared by the Motor Vehicle Manufacturers Association.

The second action, now under study by GM, would mirror a case brought against Hyundai Auto Canada by General Motors of Canada and Ford of Canada. Last fall, the Canadian government tentatively found Hyundai guilty of under-pricing its Excel model by 37 percent. The Excel currently starts at $5,395 in the United States. Last Friday, Hyundai Motor America raised prices $100 on the base model and $200 on other models.

In anti-dumping cases, an aggrieved industry must first prove that a foreign competitor is pricing its products below cost. The petitioner also must show that the pricing policy has injured domestic industry.

Although a trade adviser to the Automobile Importers of America said the threat of anti-dumping actions may simply be an attempt to scare Japanese and Korean automakers into raising prices, the threat appears to be well orchestrated.

Background for the anti-dumping case

Toyota, Nissan pickup sales fell over 20% in '87

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Minivans and small sport-utility vehicles drove the light-truck market in calendar 1987, accounting for all of the industry's sales gains.

Compact pickups, once the spark plugs of the light-truck market and still the largest single segment, stumbled for the first time. Their sales decline reflects the Japanese importers' difficulties in competing in the low-price end of this segment.

Hamstrung by the strong yen and a 25 percent import duty, the Japanese are having pricing problems. Their compact pickups once were among the lowest-priced vehicles on the car/truck market.

Automakers discover $2 billion tax bonanza

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Big 3 automakers are defending their use of a tax loophole in the 1986 Tax Reform Act that allows them to continue to defer taxes on profits derived from the sale of new vehicles. The saving is estimated at $2 billion for 1987.

Import automakers — apparently unaware of the tax change — were not so fortunate, however, since the loophole required speedy changes in franchise agreements following passage of the 1986 Tax Reform Act.

Senate Finance Committee staffers estimated the Big 3's savings at $2 billion for 1987.

"To my knowledge, only General Motors, Ford and Chrysler will be able to defer taxes on their new cars" that are sold on an installment basis, a tax consultant to the Big 3 said last week.

The "installment" angle stems from the change in the franchise agreement. At GM, for example, a dealer (or his floorplanning source) now pays 90 percent of the invoice price of the vehicle in the ususal way — after expiration of the 20-day delayed-billing period — and the remaining 10 percent when the vehicle is sold. Under the change, the manufacturer also has the option of buying back the vehicle after it has been in the dealer's inventory for nine months.

The tax loophole was created in 1986 to exempt John Deere & Co. from a change in the way installment sales are taxed. Lawmakers approved the Deere exemption after they agreed to abolish the deferral of taxes on profits from goods sold on an installment basis.

According to a report in the Washington Post, the Big 3 were able to take advantage of the tax change because the exemption was vaguely worded to conceal the identity of its intended beneficiary — Deere & Co.

GM, which tax analysts in Washington credit with first recognizing and exploiting the loophole, said in a statement, "It makes sense not to have to pay taxes on a sale until payment for that sale has been received."

A Washington spokesman for GM said "the installment sales tax issue boils down to whether the manufacturer should pay taxes on income from installment sales to dealers before or after completion of payment.

"GM believes the principle of paying taxes as payments are received is a sound one. This principle was recognized in the tax law for over 60 years. We are pleased that Congress has upheld and clarified this principle — adopted as part of the Tax Reform Act of 1986 — with respect to certain sales by manufacturers and their dealers."

Spokesman for Ford and Chrysler said their companies simply acted to take advantage of a one-time change in the tax law that was available to all companies selling through dealers.

In the past, auto manufacturers have been paid in full for the vehicles at the end of the delayed-billing period. Because of that arrangement, and because the former tax law permitted it, automakers could ship cars to dealers in the final days of one year and defer taxes on the sale until they received full payment for the vehicle in the second year.

When the law was changed, Congress sought to require manufacturers, such as Deere, to assume for tax purposes that they were fully paid in the year in which they received their first payment for the shipment. The change pertaining to installment purchases would have had little effect on the Big 3 since the franchise required dealers to pay 100 percent of the cost of a vehicle at the end of the 20-day delayed billing period.

Lawmakers agreed to an exemption, however, for the hard-pressed Deere. And, because they did not want Deere's name in the bill, the exemption was written to allow the tax deferral to continue to apply to any company if it met two criteria: If it offered an installment purchase plan and if it offered a buyback plan for an item in inventory nine months or less. This arrangement was already in force among Deere dealers.

GM, Ford and Chrysler immediately added the nine-month and installment purchase provisions to their franchise agreements in time to qualify for a Jan. 1, 1987 deadline. The change gives the Big 3 the option of buying back a dealer's inventory if the dealer has had possession for at least nine months, such as Deere offered.

The estimated $2 billion in savings for the Big 3 results as a one-time benefit in tax year 1987. The tax can be deferred each year for an indefinite period of time.

BIG BUCKS: *GM adopts new incentives; Ford, Chrysler string along*

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Saddled with heavy inventories of unsold 1987 and 1988 vehicles, General Motors announced aggressive incentives on 1988 and leftover 1987 cars and trucks for each of its six car and truck divisions.

The move sparked the usual one-upmanship at GM's domestic competitors: Ford Motor Co. extended and added rebates worth $400 to $1,000 on selected cars and $500 on selected trucks, and Chrysler began a new low-financing incentive on its popular minivans and mid-sized Dakota pickup truck.

GM's wide-ranging rebate program was the automaker's second move to spur sales. Two weeks ago, GM announced it would reduce prices on some of its trucks, and provide special introductory offers on its two new GM10 cars, the front-wheel-drive 1988 Pontiac Grand Prix and Oldsmobile Cutlass Supreme.

Auto analyst William Pochiluk of Autofacts said the Big 3 domestic automakers are generally placing incentives on their slowest and fastest selling models to gain or maintain market share in a soft market.

"It's not because of the inventory that has been accumulated so far but the generally soft market (anticipated) in the first quarter," said Pochiluk, who recently completed a study of the effectiveness of automotive incentive programs.

"Incentives are a holding action to prevent the market from cascading downward," he said.

The latest round of incentives includes:

BUICK: Rebates of $400 to $1,000 are offered on selected 1988 models, starting Jan. 12. Buick is offering $400 on Skylark, $750 on Century and LeSabre and

Audi throws weight behind 80/90 models

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

A sluggish launch for the new Audi 80 and 90 has Audi of America looking for ways to increase showroom traffic.

The company has added one television ad that pits the cars directly against BMW and Mercedes-Benz. It also is inviting potential customers on the East Coast for a two-day test drive. And it is preparing a video catalog on the car for inquiring shoppers.

In addition, Audi is exploring ways to guarantee the resale price or somehow ease concerns about the long-term value of its cars.

Company officials have admitted that they've been disappointed by the 80/90 launch. But the models have carried a heavy burden; they are Audi's hopes for reversing the sales decline brought about by the sudden-acceleration issue.

The company has projected 28,000 sales for 1988 models. But in the first two months, just over 1,300 80s and 90s were sold. In an early step to spur interest, the company began a 6.9-percent financing program and a discount leasing offer in late December.

A company spokesman noted, however, that the heaviest portion of the advertising didn't kick in until last weekend. The ad campaign had been phased in sooner than originally planned to coincide with the Nov. 1 sales debut of the new models.

In the print and television spots, memories of childhood thrills — a sleigh ride, for example — are equated to the experience of driving an Audi 90. The new television ad will show a string of Audi 80s and 90s passing a BMW and a Mercedes on a test track. Viewers will be told that Audi's entries have been outselling the BMW 3 series and the Mercedes 190 in Europe.

In the United States, though, the name Audi doesn't rank as high on the prestige ladder as do its German competitors. But the 80 and 90 mark a step into a higher price territory — nearly $28,000 for the top-of-the line 90 Quattro — and some shoppers have apparently been jolted by the price tag.

"The problem that we feel we are having with the car is that we have been bumping up against the price threshold," said one Audi insider. "We are trying to tell people that the quality is there, the performance is there. It's every bit as good as BMW and Mercedes as proven by the sales performance in Europe."

In another move, the Audi Eastern distributor is inviting thousands of potential customers to test drive an Audi for two days. Their only obligation will be to fill out an evaluation form on the car.

If the program is successful, it may be expanded to other parts of the country. A primary aim is to generate some word-of-mouth interest.

The videotaped catalog likely will be sent to people who respond to a mailing by filling out cards for more information, the spokesman said. The program should be in place before April.

WARRANTIES

FROM PAGE 1

extended complete-vehicle warranties (except on certain high-line automobiles) because that might be seen as backing off from the very long-term powertrain warranties they now offer.

Officials at Mazda, Toyota and Mitsubishi said a longer warranty will help sell cars but is not a marketing tool per se.

"We have learned to build a better product," said Phil Virga, warranty manager for Mazda Motors of America (Central).

The longer warranty, he claimed, will not cost Mazda a great deal of money because of the quality of the company's vehicles.

The call for a longer warranty originated in the service and parts department, and had been under discussion for a couple of years while data was compiled, Virga said.

"We didn't wait for a marketing battle to introduce it," he said.

However, the longer warranty will influence sales, he predicted.

"The marketing people have taken advantage of it" and are aggressively advertising it. "Dealers are letting everyone know about it. If not, they would be foolish. Anything that shows you have a better product is a light in your favor," Virga said.

Mazda introduced its three-year vehicle warranty in August, and Toyota announced its new warranty in October. Both announcements coincided with new-model introductions.

"Mazda beat us (in introducing the new warranty), but it was a coincidence. We didn't introduce our warranty in response. Warranty approval is a lengthy process in Japan," said Phil Broman, corporate service manager for Toyota Motor Sales U.S.A.

"We improved our warranty because of our need to be consistent with what the customer expects from us — quality and good service," he added.

Toyota advertising, Broman said, touts quality, not the new warranty. Toyota depends mainly on word-of-mouth communication between customers and unsolicited reports in the consumer press to reinforce its reputation as a quality manufacturer, he said.

"We (auto manufacturers) are in a quality competition. We lead in quality and want to stay there, to reinforce our image with consumers," Broman said.

"We want to stress hassle-free ownership for three years. We want to hold people in our portfolio of satisfied customers that are taken care of every step of the way," he added.

Mitsubishi Motor Sales of America's three-year warranty was put into effect mainly as a reflection of competition, said Michael Impullitti, supervisor of warranty administration.

"A warranty is one selling point, not all-encompassing but a product feature. . . . If a customer is wavering between models or considering how much a vehicle is worth, a longer warranty helps make a sale," he said.

A warranty is not inexpensive, but may be needed to meet demands of customers, Impullitti said.

"Any warranty is an expensive proposition. It is a sign of the times; as cars get more complicated and expensive, customers want to be better protected," he said.

Longer warranties are strictly marketing tools on the order of incentives or rebates, according to a Subaru of America spokesman.

Subaru, which previously offered only a one-year comprehensive warranty, has introduced a three-year powertrain and corrosion warranty.

"We went with a longer warranty for 100 percent competitive reasons," the Subaru spokesman said. "Management has always viewed warranty as a marketing tool, not as a sign of the life of the product. They are comparable to incentives to a large extent.

"Our dealers said people were competitive shopping — largely with the other Asian companies. Our (old) warranty was one of the lowest among the Japanese manufacturers," he said.

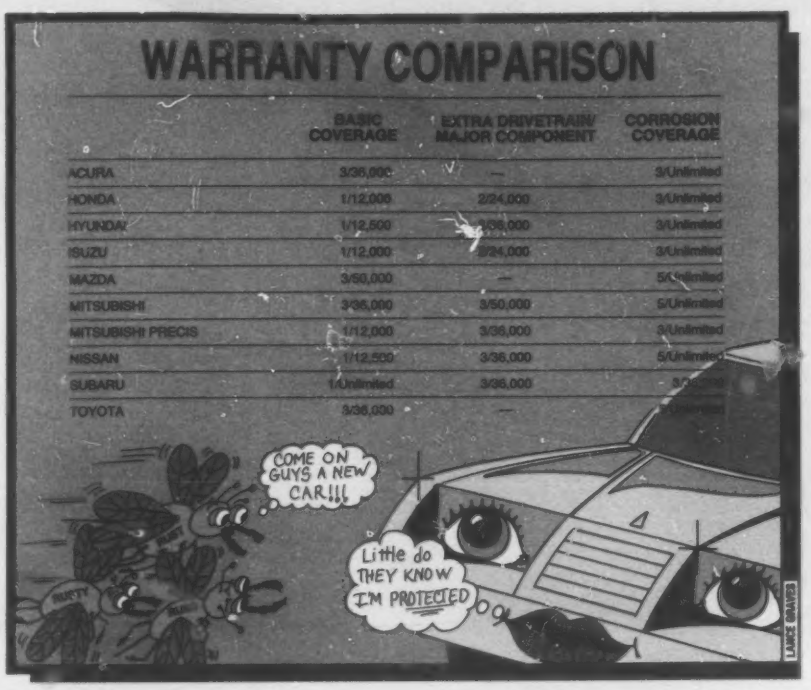
Nissan Motor Corp. in U.S.A. bumped up its corrosion coverage from three to five years. Thomas Mignanelli, senior vice president of sales and marketing, said a salesman may use a warranty to close a sale, but it is not a marketing tool or a drawing card.

Doug Lawrence, national warranty manager for Nissan Motor Corp., noted that a warranty can have a negative effect if it doesn't meet the expectations of customers. Also, some cars are seen as needing a long warranty and others have a long warranty because they can support it.

However, Nissan is not ignoring the efforts of its competitors. Asked if a full-scale "warranty war" is likely among Japanese manufacturers, Lawrence said, "Nobody wants to go to war. We are looking at the situation daily, but the situation is not tense. Just say, we are very alert to the competition and the marketplace."

An American Honda spokesman said, "Our sales (of Honda and Acura) have held up well. It is a competitive market, but our warranty has proved acceptable. No changes are planned."

Honda cars are covered by a 12-month/12,000-mile comprehensive warranty, a two-year/24,000-mile powertrain warranty and a three-year/unlimited-mileage corrosion warranty. As noted, Acura models have a 3/36 comprehensive warranty.



PICKUPS

FROM PAGE 1

To some extent, new low-priced imported cars from Korea, Brazil and Yugoslavia also have eaten into that portion of the small pickup market.

As it is, Toyota's 252,946 pickup sales in calendar 1987 were off 21.13 percent from the year-earlier total. Similarly, Nissan's 164,528 pickup sales were off 24.01 percent from 1986.

Also, Mazda, with sales of 123,699 small pickups, had a 21.27 percent decline from 1986; Isuzu, with sales of 44,297 pickups, had a 14.53 percent decline; Dodge's Mitsubishi-built Ram 50, with 65,593 sales, had a 16.66 percent decline; and Subaru dropped out of the market after selling 1,274 pickups.

Mitsubishi was the only importer to show a gain, with 37,835 pickup sales compared with the 28,307 retailed in calendar 1986.

Overall, small pickups accounted for 1,406,571 of the industry's 4,668,483 light-duty sales last year, equal to a 30.13 percent share of the market.

Volume declined 2.24 percent from the 1,438,804 small pickups sold in 1986, when they accounted for 31.25 percent of the light-truck market.

New full-sized pickups from Ford and GM helped to slow, but not stop, the ongoing decline of the full-sized pickup market.

Full-sized pickups, the second largest light-truck category, chalked up 1,204,232 sales in calendar 1987, accounting for 25.80 percent of the light-truck total.

Their sales were off 2.69 percent from 1,237,500 sold in calendar 1986, when they accounted for 26.87 percent of the market.

Large sport-utility and van sales continued to decline, largely because of the increasing inroads of compact versions of those vehicles.

Full-sized van sales of 473,396 units were off 7.69 percent from 512,823 retailed in 1986.

Their 10.14 percent market share was down from an 11.14 percent share in 1986.

Full-sized sport-utilities accounted for 208,643 sales, off 6.16 percent from the previous year's 222,338.

Their 4.47 percent market share reflected a decline from the 4.83 percent share of market they held in 1986.

The Japanese had mixed results in the growing compact van market, but fared better overall in the compact sport-utility segment.

Toyota, for example, retailed 19,414 compact vans last year, off from 33,290 in calendar 1986; Nissan, 17,673 compared with none the previous year; and Mitsubishi, 3,103 compared with 2 the previous year.

In the sport-utility segment, Toyota retailed 31,423 4Runners, up from 30,158 in 1986; Nissan, 34,313 Pathfinders, up from 6,901; and Isuzu, 42,693 Troopers, up from 36,893.

Mitsubishi retailed 10,924 Monteros, up from 6,676 in calendar 1986; Suzuki, 81,349 Samurais, up from 47,732; and Dodge, 19,539 Mitsubishi-built Raiders, up from 4,768 in 1986.

Small sport-utilities outsold minivans for the first time in calendar 1987.

Compact sport-utility sales of 688,024 were up 16.56 percent from 590,287 in 1986.

Minivan sales of 687,617 were up 14.02 percent from 603,085 in 1986.

They had a 14.73 percent market share compared with a 13.10 percent share in 1986.

Warranty firm dies; makers fill in

By Alex Law
SPECIAL CORRESPONDENT

TORONTO — Seven Canadian import-car firms have agreed to honor about 400,000 extended-warranty contracts sold by a bankrupt firm in Edmonton, Alberta.

People who bought extended warranty coverage on Mazdas, Hondas, Hyundais, Nissans, Toyotas, Subarus and Volkswagens from International Warranty Co. Ltd. will have their claims covered — for the time being, and only if they bought the cars new.

International Warranty let its 150 employees go and closed its doors in mid-December.

The uncertainty about how long this offer will stand depends upon the findings of the court-appointed receiver, Clarkson Gordon. The firm is expected to present a plan for processing warranty claims by the end of the month.

Until then, the car firms will honor the estimated 4,000 warranty claims, but they have made it plain that they are under no legal obligation to do so.

However, an Ontario official has written all the car companies, domestic and imported, telling them the government expects them to honor the contracts they endorsed or sold.

How each claim will be treated at each car company is somewhat in doubt, since the warranty records are in the possession of Lloyds Bank Canada, a secured creditor of International Warranty.

The Automobile Importers of Canada is trying to obtain access to the records. To complicate the matter further, the auto importer association has to gain access to the files of an insurance company that insured payment of claims under some International Warranty contracts.

It appears, however, that the people who bought their cars used will simply be out of luck.

Spurred by that situation, Automobile Importers of Canada has asked the 10 provincial governments in Canada to set up consumer protection legislation covering extended warranties on cars.

Peter Davies, the group's executive director, said it wants the governments to take the "appropriate steps" needed to "safeguard the interests of our customers in this matter and in the future."

JAPANESE

FROM PAGE 2

The great rise of the yen and the resulting severe losses in profits have led all companies to look for new ways to tighten their belts. The effort is particularly pronounced at Nissan and Mazda, whose sales have faltered in recent years.

Last year, when Nissan had just recorded its first-ever operating loss, Kume opened the new year by calling for a "lean company."

This year, with the anticipation of a 50 billion yen ($400 million) operating profit, Kume called for greater efforts to build a "strong and tough corporate organization."

Mazda's Furuta said previous efforts to cut back had focused on reducing waste. He said the company now needs "a drastically new approach, with an eye toward developing the best possible performance at the lowest possible cost."

Kume

Toyoda

All companies refer to 1988 as what Mazda's Furuta calls "a challenging year." The prospects of maintaining employment is an issue at a time when exchange rates and cyclical demand are deflating the export market and increasing the prospects of moving some production overseas.

But all companies insist they will maintain current levels of employment, despite continued efforts to reduce costs. Recently, Mazda announced a tie-up with Suzuki Motor Co. to produce minicars for the domestic market. Part of the intent was to expand Mazda's efforts in the Japanese market, but the company also said its point was to maintain employment levels at its Hiroshima plants.

Toyota Chairman Eiji Toyoda said that maintaining employment is a problem not just for the company or the industry, but for the country.

RVIA plans to expand consumer awareness effort

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

LOUISVILLE, Ky. — Although it is bullish about the long-range future, the Recreation Vehicle Industry Association has a number of more immediate concerns to resolve.

A major one is its continuing effort to create greater awareness of RVs among consumers.

"A lot of people still don't know what an RV is. They think it's a motor home or pickup camper," said Don Cuzzocrea, chairman of the RVIA board of directors and chairman of Starcraft Corp.

RVIA will continue — and expand — its public relations efforts through Burston-Marsteller, New York, which netted it a segment on television's "20/20" show and a lot of local TV spotlights.

RVIA also won gold honors in the Mercury Awards Competition, an international communications competition, for its promotion manual for first-time buyers, which was aimed at helping RV dealers expand their markets.

Its "Wish you were here" weekly RV travel series on cable TV received an ACE Award nomination from the National Academy of Cable Programming.

Through an agreement with the Recreation Vehicle Dealers Association, Fairfax, Va., RVIA plans to pool its finances and get additional input from RV dealers for increased promotional efforts, Cuzzocrea said.

RVIA has also been lobbying, on a state-by-state basis, against stricter driver licensing for RV operators.

Because of the federal government's crackdown on heavy-truck accidents, some states have been looking at stiffer licensing requirements for operators of large vehicles, including motor homes.

California is looking at new medical requirements, including tests, for motor home operators.

Cuzzocrea said there are no statistics indicating that motor homes, generally driven by senior citizens, are involved in an inordinate number of accidents.

The RVIA is concerned, though, that stiffer licensing requirements might scare some of those people away from the market.

The association has been successful in defeating changes in the new federal income tax law that would have eliminated the deduction of interest on loans used to buy RVs as second homes.

Cuzzocrea pointed out how unfair it would have been "if a guy who buys a $1 million condo in Maui, Hawaii, can write off the interest on his loan" but a middle-income person "who bought a park model and parked it in Texas" wouldn't have been allowed to write off the interest.

RV buyers tend to make pretty big down payments, often 50 to 60 percent of the price of the vehicle, Cuzzocrea said. Some even pay cash for units that cost up to $100,000 or more.

The law probably would have had more of a psychological effect than anything else, he said.

"If they found the interest not deductible, that would have been one more reason for them not to buy. Our job is to remove all the negatives," Cuzzocrea added.

RVIA is continuing its certification program for van converters and is continuing its educational program on federal safety standards for them.

But it doesn't plan any tougher certification standards or entry into new areas, like warranty standards for converters.

"We (RVIA) have discussed setting other standards numerous times," Cuzzocrea said. "But as an industry association, we really can't. It gets into the competitive nature of the business. Trade associations are restricted by federal antitrust laws. Our legal feeling is that the current program is as far as we can go in our standards."

Warranties, for example, are part of the price and the package that converters offer, and there is no legal way to standardize them throughout the industry, even though good warranty backing is a major dealer concern, he added.

Just as the car companies have been focusing on customer satisfaction, so has the RV industry, and "the general quality level of this industry is so much better than it was four or five years ago," Cuzzocrea said.

"All the way up and down the product lines, the improvement is really amazing. It's not really an association thing. The companies realize that if they don't take care of customers, they won't come back," he said.

From a demographic standpoint, RVIA manufacturers are excited about the long-term outlook.

All the surveys conducted either by the RVIA or independent companies point out that the major RV buying segment is the fastest-growing in the country.

The industry is looking for good times between now and the year 2000. That is probably more true of larger motor homes and fifth-wheel trailers than some other segments.

Fold-down camping trailers, for example, are not expected to show much growth during the next 10 years. That is one reason why Starcraft has been diversifying into big travel trailers.

The company has four van conversion plants and could probably use another in Florida, a strong van conversion market where Starcraft isn't very heavily represented, Cuzzocrea concluded.

RV shipments rise for third straight month

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RV wholesale shipments rose for the third straight month in October, continuing a late-season selling surge for the industry.

October shipments of 33,900 units were up 16.10 percent from a year earlier. The industry shipped 347,400 units during the first 10 months of the year, an increase of 5.88 percent over the same period in 1986, the Recreation Vehicle Industry Association said.

The results were considered very encouraging, particularly in light of the October stock market tumble and the resulting slide in consumer confidence.

The Index of Consumer Confidence, as measured by the University of Michigan's Survey Research Center, showed October's level was down 4.30 points, to 89.30, largely due to responses received in the final 10 days of the month.

Although consumers were not as optimistic about the economy in general, their evaluation of their personal finances has remained quite favorable, RVIA said.

All categories of RVs except park trailers participated in the October upturn, with van campers leading the way with a 100 percent sales increase.

Van camper sales totaled 600 units in October. With 5,800 for the 10-month period, they exceeded the full-year total for 1986.

Van conversion shipments, totaling 14,800 in October, were up 18.40 percent from a year earlier. Their 10-month total of 157,200 units was 0.88 percent below 1986's level. The industry shipped 181,900 units in 1986.

Shipments of van chassis with the seat-delete option from Detroit manufacturers to converters totaled 16,900 in October, off 22.83 percent from 21,900 a year earlier.

For the 10-month period, however, Detroit manufacturers shipped 181,000 stripped chassis, up 25.00 percent from 144,800 in the year-earlier period.

Recreational Vehicle Wholesale Deliveries

	October 1987	October 1986	% change	10 months 1987	10 months 1986	% change
Travel trailers	4,900	4,600	+ 6.5	53,400	49,300	+ 8.3
Park Trailers	800	900	- 11.1	5,600	6,500	- 13.9
Travel trailers—fifth wheel	2,800	2,300	+ 21.7	23,200	19,900	+ 16.6
Folding camping trailers	3,100	2,500	+ 24.0	35,200	30,100	+ 16.9
Truck campers	800	600	+ 33.3	9,000	6,400	+ 40.6
Towable RV total	12,400	10,900	+ 13.8	126,400	112,200	+ 12.7
Conventional (type A)	4,100	3,200	+ 28.1	34,700	28,000	+ 23.9

1988 PLANS: *Bush will address RVIA; group schedules busy year*

RESTON, Va. — The Recreation Vehicle Industry Association, which closed out 1987 with strong attendance at its two major Western and Southern shows, has mapped out some of its 1988 agenda.

Vice President George Bush will deliver the keynote address at RVIA's annual meeting in Marco Island, Fla., March 2-5. Bush is scheduled to speak the morning of March 5.

Other key events planned as part of the annual membership meeting include an open forum featuring spokespersons from the auto industry and a meeting of van converters to discuss promotional ideas and association programming.

Converters will have a chance to talk to manufacturers about their specific industry problems and opportunities.

There also will be regional caucuses. An RVIA board of directors meeting is scheduled for March 6. The board will meet again in Washington on June 30.

Seminars on federal motor-vehicle safety standards for van converters working toward qualifications for association membership are scheduled for Feb. 18 and June 23 at RVIA's headquarters in Reston, Va.

The 36th annual Recreation Vehicle Show in Los Angeles is scheduled for Nov. 1-14. The industry trade portion of the show will be held Nov. 1-2, and the public portion is set for Nov. 4-13.

Both this Western show and the subsequent one in Louisville generated heavy traffic and upbeat responses from attendees in 1987.

Last year's show in Dodger Stadium, Los Angeles, drew 1,651 representatives from 683 dealerships, representing a 38-dealership increase over the previous year.

Public attendance at the Western Show was up 7 percent in 1987 over the previous year, with a total of 49,191 people attending.

Dealer attendance at the Louisville show was up 17 percent in 1987 over the previous year. Last year's show drew 4,472 dealers from an estimated 1,500 dealerships. Overall attendance was also up.

Vixen names new officers; gas engine due in March

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC, Mich. — Vixen Motor Co. has named new top officers and is preparing to introduce its new gasoline-engined motor home in March.

Robert Gillow, president of Action Oldsmobile, Livonia, Mich., became chairman of the board and chief executive officer of Vixen Motor, effective Jan. 4.

He replaced William T. Collins Jr., co-founder, who retired.

Allen J. Dryer was named president and chief operating officer. He joined Vixen in 1985 after positions with Chrysler and Volkswagen of America.

Dryer replaced Gerald Bryce, who left Vixen in December.

Collins will continue as a member of Vixen's board of directors and will do some consulting work for the company. He also will retain his minority investment in the firm.

"My mission was to get the Vixen 21 into production and to help launch the gasoline engine, and that's been done," Collins told Automotive News.

Gillow, one of Vixen's strongest dealers, has been a director of the company since it was founded.

He said the changeover to a new V-6 gasoline engine/automatic transmission model was on schedule.

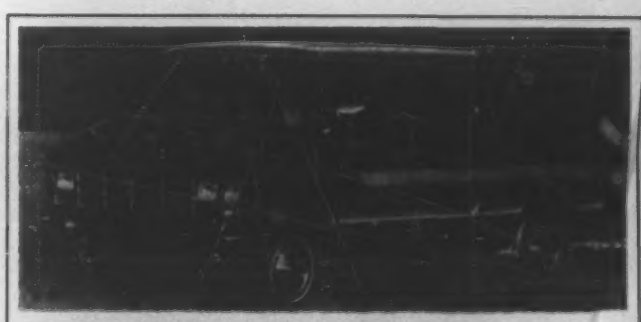
"The pilot-line vehicles are being built and system fill will take place in March," Gillow said.

The Vixen 21 SE features a new floorplan, raised roof and more conventional motor home amenities, as well as General Motors' sequentially fuel-injected 3800 V-6 engine, which is used in Buick, Oldsmobile and Pontiac cars, Gillow said.

The engine, revamped for 1988 from GM's 3.8-liter V-6, delivers a maximum 165 horsepower at 4,800 rpm and has 210 pounds-feet of torque at 2,000 rpm.

"We have been spending a lot of time restructuring, reorganizing and preparing for the new-model introduction," Gillow added. He said he was not prepared to provide all the details of the company's new-model program at this time.

A major focal point, though, will be a heavy marketing effort in California, a huge motor home market from which Vixen's previous diesel-engined model was excluded because of emissions regulations.



Winnebago highlights 1988-model conversions
Winnebago's 1988-model van conversions, such as this full-size Dodge, feature tinted vista bay windows. The company offers conversions of all domestic full-size vans and a variety of minivans. Its two distinct full-size models — the flagship St. Regis and the economical SL Value conversion — come with a variety of standard and optional features.

Canadian car sales decline 6% for '87; trucks rise 12%

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Canadian sales of North American-built cars dropped 6.16 percent in 1987, despite a healthy 5.14 percent gain in December.

Dealers sold 693,560 new domestic cars last year, compared with 739,124 in 1986.

In December, dealers sold 42,782 domestic cars, compared with 40,690 a year earlier.

Truck sales showed gains for both the month (18.30 percent) and for the year (12.71 percent).

General Motors sold 21,791 domestic cars in December, up 14.62 percent from 19,012 in December 1986. However, sales declined 10.47 percent for the 1987 calendar year. GM's Canadian dealers sold 355,341 North American-built cars in 1987, compared with 396,893 in 1986.

"We were down a little bit in the 1987 calendar year overall, but we're quite happy with our performance in the Canadian market," said a GM of Canada spokesman.

"The Chevrolet Corsica and Beretta and the Pontiac Tempest (Pontiac version of the Corsica) have been quite well accepted here in their first year," he added.

During December, GM offered Canadian buyers free air conditioning, free automatic transmission or $500 on Pontiac 6000, Sunbird and Tempest; Chevrolet Cavalier, Corsica, G-van, ST pickup and ST sport-utility vehicles; Buick Century; and Oldsmobile Cutlass Ciera.

CANADA MARKET SHARES December 1987

Cars	
General Motors	50.93%
Ford Motor Co.	28.21%
Chrysler/AMC	19.32%
Honda	1.38%
Volvo	.16%
Trucks	
General Motors	35.77%
Ford Motor Co.	39.70%
Chrysler/Jeep	24.53%

The Pontiac 6000 was the best-selling GM car in 1987 with 32,916 units sold. The Chevrolet C/K pickup truck was the best-selling GM truck with 29,341.

Ford sold 12,069 North American-built cars in December, up 3.07 percent from 11,710 a year earlier.

For the year, Ford's domestic sales totaled 182,912, down 1.97 percent from 186,585 in 1986.

The Ford Tempo, with 42,320, and the Ford F-series full-sized pickup truck, with 59,676, were the best selling car and truck for Ford of Canada in 1987.

Chrysler sold 8,267 North American-built cars in December, down 8.69 percent from 9,054 in December 1986. The 1987 figure includes 297 American Motors Eagles and Renault Alliances.

Chrysler's domestic-car sales were up slightly for the 1987 calendar year because of the inclusion of AMC Eagle and Renault models. The company sold 141,189 North American-built cars in 1987, up 0.93 percent from 139,894 in 1986. The 1987 total includes 4,764 domestic Renault and Eagle cars, thus sales of Chrysler, Plymouth and Dodge cars were down.

AMC figures for 1986, which are not included in the Chrysler totals for that year, were 785 for December and 13,161 for the year.

"The four- to five-month absence of the Omni and Horizon Expo (called America in the United States) and the M-body cars (Fifth Avenue, Diplomat and Gran Fury) was a factor in the decline; it definitely hurt us," said a Chrysler Canada spokesman.

The Plymouth Reliant was the best-selling car for Chrysler in 1987 with 26,847. The Plymouth Voyager minivan was the best-selling truck with 19,116.

Honda Canada sold 589 Canadian-built Hondas in December vs. 66 a year earlier. Honda began producing cars in its Alliston, Ontario, plant in November 1986. Honda sold 11,985 domestic Hondas in the 1987 calendar year, compared with 126 in 1986.

CANADIAN SALES OF NORTH AMERICAN-BUILT VEHICLES

TOTAL TRUCK	29,994	25,355	+25.67	395,301	350,728	+12.71

The Accord four-door model was the top-selling model for Honda in 1987.

Volvo sold 66 Canadian-built cars in December vs. 63 a year earlier. Sales of domestic Volvos totaled 2,133 in 1987, down 13.47 percent from 2,465 in 1986.

The Swedish-built 740 series was Volvo's best seller in Canada in 1987.

Truck sales continued to be strong in Canada. Dealers delivered 29,994 domestic trucks in December, up 18.30 percent from 25,355 in December 1986. They sold 395,301 domestic trucks for all of 1987, a gain of 12.71 percent over 350,728 in 1986.

Ford outsold GM in trucks in December and posted the best total in its history.

Ford sold 11,907 domestic trucks in December, up 18.93 percent from 10,012 in 1986, the previous record. It sold 142,423 domestic trucks in the 1987 calendar year, an increase of 14.29 percent over 124,626 in 1986.

GM sold 10,729 North American-built trucks in December, a 15.11 percent increase over 9,321 in December 1986. GM sold 158,096 domestic trucks in 1987, a 4.11 percent increase over 151,854 in 1986.

Chrysler dealers sold 7,358 domestic trucks in December, up 62.28 percent from 4,534 a year earlier. The December 1987 figure includes 1,993 Jeeps. AMC sold 1,488 Jeeps in December 1986.

Last month's truck total was an all-time December record for Chrysler's Canadian operations; the previous record was set in December 1986.

Jeep sales also boosted Chrysler's full-year total. Chrysler dealers sold 94,767 domestic trucks in 1987, up 60.50 percent from 59,046. The 1987 total includes 22,263 Jeeps. AMC sold 15,202 Jeeps in 1986.

In addition to North American-built cars sold in December, GM sold 523 Chevrolet Sprints, 461 Pontiac Fireflys, 25 Chevrolet Spectrums, 13 Pontiac Sunbursts, 16 Isuzu I-Marks and 13 Daewoo-built Optima models.

Ford sold 39 Merkur XR4Ti models, eight Merkur Scorpios and 412 Taiwanese-built Tracers. Chrysler sold 782 Japanese-built Mitsubishi cars, 11 Peugeots and 174 Renaults.

Honda sold 3,879 Japanese-built Honda cars and 657 Japanese-built Acura cars in December. Volvo sold 252 Swedish-built Volvos.

In the imported truck category, GM sold 50 Isuzu Troopers and Chrysler sold 271 Mitsubishi trucks in December.

Full-year totals for imports were: Sprint, 11,805; Firefly, 9,936; Spectrum, 1,150; Sunburst, 844; I-Mark, 63; Optima, 20; XR4Ti, 594; Tracer, 9,254; Scorpio, 240; Mitsubushi cars, 11,158; Peugeot, 379; Renault, 3,352; Honda, 54,964; Acura, 6,027; Volvo, 5,283; Trooper, 108; and Mitsubishi trucks, 3,757.

4X4 VANS

4-WHEEL DRIVE CONVERSIONS FOR FORD, DODGE, CHEVY, GMC and MINI-VANS

For tough, off-road use and severe weather, nothing beats Pathfinder four-wheel drive vans. Our Ohio plant produces more 4 x 4 conversions than any other. Pathfinder is known for better engineering, quality installations, and longer life. Ship-Thru available for authorized dealers.

S. California OK's clean-fuel plan

5-year program designed to attack air pollution at the source

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — The South Coast Air Quality Management District has approved a far-reaching air-pollution-control program that could replace up to 400,0000 gasoline- and diesel-powered vehicles with those that are powered by clean-burning fuels or electricity.

Approval of the program came unexpectedly shortly after it was officially unveiled at the first meeting of the the new 11-member air-quality governing board.

The program marks a turning point in the way in which the Air Qality Management District has attempted to reduce air pollution in the South Coast Air Basin.

Most of its past efforts to curb pollution have involved the imposition of technological controls on smokestacks and tailpipe emissions. Now, for the first time, the Air Quality Management District said it will mount a concerted attack on the source of emissions — the fuels themselves.

Under the five-year program, there will be 16 demonstration projects for vehicular sources to test, under realistic conditions, the advantages and limitations of vehicles that are powered by electricity, methanol, compressed natural gas and other alternative fuels. Another 13 projects are earmarked to test the viability of cleaner-burning fuels at industrial sites.

The Air Quality Management District said it hopes the projects will hasten the day when clean-burning fuels and electricity will be used to run 40 percent of all passenger vehicles and 70 percent of trucks that now are diesel-powered. It believes that goal can reached by the year 2007.

Rules enforcing the clean-fuels decree are expected to be announced in September and are expected to cover all public and private fleets with 15 or more vehicles, including transit buses and rental cars.

They will cover between 200,000 and 400,000 vehicles in the South Coast Air Basin — Los Angeles, Orange, Riverside and San Bernardino counties — said to be the nation's smoggiest area.

Other provisions of the program awaiting formal rules will require service stations to sell cleaner-burning methanol by the early 1990s.

The air quality board will coordinate such a requirement with the California Air Resources Board, which is tightening vehicle emission standards. According to an air resources board official, that will speed the day when auto manufacturers are forced to build methanol-powered vehicles in order to comply.

Beginning immediately, all new electrical turbines, internal combustion engines and co-generation units must use methanol as the emergency backup fuel in place of diesel.

The Air Quality Management District said it is the first in the United States to impose such a requirement. It also plans to present a schedule by May to phase out the use of diesel fuel in all stationary turbines, boilers and other equipment.

U-Haul chooses Anglo American to auction 50,000 trucks, trailers

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Tons and tons of trucks, trailers and mobile homes will roll across the auction blocks beginning this month in a deal ballyhooed by Anglo American Auto Auctions and U-Haul International as an industry first.

More than 50,000 U-Haul trucks and travel trailers will be sold through Anglo auctions during the next five years as the national rental company for do-it-yourself movers begins an expansive rotation of its aging fleet.

"This marks the first time that U-Haul will use an auction firm to remarket its fleet," said Al Ladensack, public information director for U-Haul. He said 10,000 vehicles will be shipped to Anglo's 20 locations in 1988 for sale. He predicted that trucks will sell for $2,500 to $4,500 each.

Vehicles crossing the auction block will include: Ford F-350 trucks with one-ton chassis and aluminum van boxes measuring 14 feet; several varieties of Ford F-600 trucks with two-ton chassis and aluminum boxes measuring 12 feet, 16 feet, 20 feet and 24 feet; 1984 and 1985 Southwind motor homes; and 1985 27-foot Alumalite motor homes.

The package also includes hundreds of stake trucks, tractors and trailers through Class 8, vans and miscellaneous pickup trucks.

About 60 percent of the vehicles destined for the auctions are F-600s and most of the others are F-350s. Ages of the trucks ages are mixed, dating from 1974 to 1984, Ladensack said.

He said the company will unload approximately 4,000 motor homes and 650 tractor-trailer rigs in a broad range of classes.

Anglo auctions will sell the trucks in dealer-only sales and in special public sales at auctions held in Atlanta; Fort Wayne, Ind.; Dallas and San Francisco.

Dealers will be alerted to the U-Haul sales through direct mail, telemarketing, display advertising and point-of-purchase programs.

Nearly all the vehicles are equipped with four-speed manual transmissions, although there will be some automatics. All have ramps and low decks for loading.

"In many cases, the mileage is unknown because the speedometers have gone beyond their range," said Bob Lalain, national sales director for Anglo.

In the past, U-haul rotated its vehicles by selling them through its rental outlets. "This is a new stance for us," said Ladensack. "We felt it would be a quicker method of disposing of the vehicles."

Alfa Romeo seeks America's eye

164 sedan's launch will culminate its 20-month publicity plan

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

ENGLEWOOD CLIFFS, N.J. — Executives at Alfa Romeo Inc. have a major goal for the next 20 months: Get Americans to sit up and take notice of their company and its cars.

The time span is significant because at the end of it, the new 164 sedan will be introduced in the United States.

Robert Owens, Alfa Romeo marketing director, said the company has no intention of merely dropping the new model into a highly competitive marketplace without preparation.

Many former Alfa Romeo executives have expressed similar goals over the years. However, this time, according to Owens, Alfa Romeo has a product to build upon: the Milano.

The Milano sedan, introduced in early 1986, received generally good reviews from the enthusiast press.

Owens, who has been with Alfa Romeo for slightly over a year, termed the Milano a legitimate contender in the sports sedan market. He views the car as the cornerstone on which to build Alfa Romeo's sedan business after years of being considered in the United States as a sports-car company.

Owens did not minimize the importance of the sports-car market to the company. The Spyder, in three versions, has represented the bulk of Alfa sales in the United States for years even though the design is old. Owens referred to it as "classic."

Owens: Milano is the cornerstone on which to build Alfa Romeo's sedan business

Unlike the Spyder, the Milano has a lot of competitors in the marketplace, including the BMW 3 series.

Alfa Romeo sold 6,300 cars in 1987, down from 8,201 in 1986. Owens attributed the decline to the lack of an automatic transmission for the Milano. Milano sales last year were 2,839. The company sold 70 GTV-6 coupes, a model that has been discontinued. The rest of the sales were Spyders.

Alfa Romeo expected to have Milano automatics last March. Instead, the cars arrived in December, which prevented the company from taking advantage of prime selling periods.

There is now a good model mix, Owens said, with two automatic-transmission and two manual-transmission Milano models available.

A glimpse of the support Alfa Romeo has in mind to promote the company and the Milano was seen late last year. It went into television advertising on a broader scope than at any time in the past.

From Sept. 10 to Dec. 13, the company spent $6 million on a campaign to make the name more widely known. Owens said the company had planned to return to television advertising this month, but decided to postpone the return for several months because of the unsettled conditions resulting from the stock market crash.

A new television commercial is in production and should be completed by the end of this month, Owens said.

Owens said he does not want to become involved in what he terms "extra-curricular programs," such as roadside assistance. However, Alfa Romeo soon will introduce a leasing program. The leasing program will be promoted in print advertising.

He also said that Alfa Romeo will concentrate its future advertising efforts on television, magazines and newspapers.

Chrysler slates $187 million for Indiana

INDIANAPOLIS — Chrysler Motors will spend $187 million to modernize three Indiana plants.

Richard E. Dauch, Chrysler Motors executive vice president — manufacturing, said the company will invest $130 million to expand its transaxle and transmission program at Kokomo, $30 million to modernize the Indianapolis foundry and $27 million to update the New Castle machining and forge operation.

Chrysler officials said the company could spend up to $38.5 million retraining 3,380 workers at the three plants. Indiana will contribute $1,015,000 to help with retraining costs.

Dauch said the reinvestment in the Indiana plants will help the company compete against foreign and domestic manufacturers.

"It's no longer the Big 3. It's the Big 36," he said. "If we are to compete effectively with them, we must constantly update our technology to equal or surpass our foreign competitors."

At the Indianapolis foundry, which manufactures *engine blocks, all 719 employees* will be retrained at an estimated cost to Chrysler of $21.8 million.

At New Castle, where components such as wheel hubs, idler arms and tie rods are produced, all 1,061 employees will be retrained at a potential cost of $13.7 million, officials said.

Retraining costs are expected to reach $3 million for 1,600 of the 4,492 workers at Kokomo, where three- and four-speed transmissions for both rear-wheel-drive and front-wheel-drive vehicles are manufactured.

Chrysler is phasing out its Indianapolis electrical plant, which had 975 workers when the two-year phaseout was announced last March.

Oklahoma sale promises 300 collector cars

OKLAHOMA CITY — Sports cars will be the main attraction at the fourth annual Oklahoma City Classic Car auction, scheduled for Feb. 29-21 at the International Trade Center.

More than 300 collector cars will fall under the gavel, including a 1962 Ferrari Lusso, a 1967 Ferrari 330 GT, a 1972 Jaguar V-12 roadster, a 1964 Austin-Healey 3000 and a 1973 Porsche RS Carrera coupe.

The auction will be conducted by Indiana-based Kruse International.

Imports report record inventories

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

At the dawn of the new year, the weak dollar continued to throw cold water over sales of imported cars. One dramatic result: Inventories of imported cars in the United States on Jan. 1 soared to record highs.

Stocks of domestic cars also were well above those of a year before and close to those of a month earlier.

The supply of unsold imported cars on Jan. 1 totaled 677,306 units, which represented a 61-day supply at current selling rates. That compares with 473,165 units and a 38-day supply a year before. On Dec. 1, the supply of unsold imports totaled 583,128 units, a 57-day supply, according to Automotive News estimates.

The import stockpile was down to 48 days as recently as Oct. 1 when there were 547,966 cars on hand.

The earlier record of 650,508 units, a 60-day stock, came on July 1, 1987. Truck inventories then, of 241,038 units, also were a record and represented a 71-day stock. That truck record still stands.

The stockpile of imported trucks as of Jan. 1, 1988, was 185,183 units, a 70-day supply, down from 202,207, a 53-day supply, a year ago. A month earlier, the supply of new unsold imported trucks totaled 201,613 units, equal to a 78-day supply.

As of the first of this year, the combined imported car and truck inventory totaled 862,489 units, a 63-day stock, compared with 675,372, or just 42 days, a year before and 784,741, or 61 days, a month before.

Executives of importing companies and others have been saying the dollar's declining value in relation to the Japanese yen — and most other currencies — has led to declining sales of imports in this country. A weak dollar means prices of imports must increase as sellers try to recapture profits.

The stockpile of domestic cars stood at 1,682,600 units on Jan. 1, the equivalent of a 79-day supply. That compares with 1,506,557 units, a 58-day supply, a year before and 1,686,501 units, an 83-day supply, on Dec. 1, 1987.

Inventory figures include cars in dealers' hands, in transit in the United States and at ports of entry. Days' supplies are based on selling days, excluding Sundays and holidays.

General Motors cars made up the largest share of domestic stocks as the year began. They totaled 921,495 units, or 54.76 percent of the domestic total. Ford Motor Co. had 416,221 cars, or 24.74 percent. Chrysler Motors had 295,069 cars, accounting for 17.54 percent.

Among the transplants — foreign-owned companies with assembly operations in this country — Volkswagen cars made up 1.16 percent of the domestic total. Nissan accounted for 0.78 percent; Honda, 0.61 percent; Toyota, 0.29 percent; and Mazda 0.12 percent.

By size class, the Jan. 1 domestic inventory showed: intermediate, 44.21 percent; compact, 23.87 percent; subcompact, 11.33 percent; standard, 19.18 percent and luxury, 1.41 percent.

Among imports with large days-supply figures as of the first of this year were Audi with 182 days, Merkur sold by Lincoln-Mercury dealers with 172 days and the Mitsubishi lines sold as Colts by Chrysler Motors dealers with 174 days.

Among imported trucks, large days-supply tallies were noted for Isuzu with 145 days, Nissan with 96 and Mazda and Mitsubishi each with 67 days.

INCENTIVES

FROM PAGE 3

$1,000 on Electra.

There is no dealer participation cost. Customers must select the car from stock and take delivery before Feb. 29.

Buick also is offering consumers $1,000 rebates on selected 1987 Buick models that are still in dealer inventory. Eligible vehicles include 1987 Skyhawk, Skylark, Somerset, Century, Regal, LeSabre, Electra Park Avenue and Electra Estate Wagon. The 1987 Regal equipped with the 3.8-liter intercooled engine is not eligible.

The 1987 model incentives began Jan. 12 and expire March 2. There is no dealer participation cost.

CADILLAC: Cadillac is mailing coupons worth $1,500 toward the purchase of a 1988 Seville to 95,000 Seville and Lincoln Continental owners who purchased their cars between the 1979 and 1987 model years. Customers must order the cars by March 31 or purchase them from stock. The program began Dec. 20. There is no dealer financial participation required.

CHEVROLET: Chevrolet announced its "Winter Cash" program offering $400 to $1,000 to customers on selected cars and trucks. Buyers of the following 1987 and 1988 vehicles are eligible: Cavalier, $400; Spectrum, $500; Celebrity, $750; Spectrum Turbo, $1,000; S/T pickup cab and chassis model, $500; S/T Blazer, $500; C/K 1500 to 3500 series pickups and cab chassis, $500; R/V 10 to 30 series pickups and cab chassis, $500; and G10 to 30 series vans, $500. Buyers of 1988 Corsica or Beretta models will receive a $600 rebate.

The program began Jan. 12 and expires Feb. 29. Vehicles must be purchased from dealer stock. There is no dealer participation cost.

CHRYSLER MOTORS: Chrysler announced last week that buyers of its 1987 and 1988 Dodge Dakota "S" pickups can receive 7.7 percent loans for up to 48 months or 9.9 percent loans for 49 to 60 months. Customers who lease a Dakota "S" pickup through Chrysler's Gold Key Lease Program are eligible for special-rate financing or a $500 rebate. The Chrysler retail program has no expiration date.

In a program that began Jan. 12, buyers of 1987 and 1988 Dodge Caravan and Plymouth Voyager minivans can receive 9.9 percent, 72-month loans until Jan. 31.

FORD MOTOR: Ford extended and sweetened incentives on selected 1987 and 1988 cars and trucks until March 8. That program was scheduled to expire on Feb. 3. Eligible vehicles and rebates are as follows: 1987 and 1988 Escort and Lynx, $400; Mustangs equipped with 2.3-liter engines and manual transmissions, $400; Tracer, $500; Thunderbird and Cougar, $600; Thunderbird Turbo Coupe, $1,000; Taurus and Sable, $750, and 1987 Sable, $1,000.

Also included are 1987-1988 F-series full-size trucks equipped with manual transmissions, Bronco II, Ranger and Aerostar, $500. All vehicles must be purchased from dealer stock and delivered by March 8. There is no dealer participation cost.

GMC TRUCK: Rebates of $500 are offered on 1988 Sierra full-sized pickups; 1987 and 1988 R/V full-sized pickups, cab and chassis models; 1987 and 1988 S-15 compact pickup trucks and cab and chassis models; 1987 and 1988 S-15 Jimmy; and 1987 and 1988 Rally and Vandura full-sized vans.

There is no dealer participation cost. Customers must purchase eligible vehicles from stock between Jan. 12 and Feb. 29.

OLDSMOBILE: Customer rebates are $400 on 1987 Calais and 1988 Cutlass Calais, $750 on Cutlass Ciera and $750 on Cutlass Cruiser.

Dealers will receive a cash bonus on 1987 and 1988 Firenza, rear-drive Cutlass Supreme, Delta 88, Custom Cruiser and 98 Touring Sedan models based on each dealer's total sales.

Oldsmobile dealers receive $250 per unit for meeting up to 33.9 percent of their goals, $500 per unit for meeting 34 percent to 66.9 percent and $750 per unit for selling more than 67 percent of their goals.

Dealers can receive an additional $600 on any 1987 model sold between Jan. 12 and March 2 and another $400 per car if they sell their entire inventory of 1987 models by March 2.

Oldsmobile is giving each dealer an advance check worth 50 percent of his or her potential earnings from both the 1988 dealer cash bonus program and the $600 bonus program on 1987 cars.

There is no dealer financial participation charge. Consumers must purchase vehicles from stock and take delivery before the program ends.

PONTIAC: Pontiac announced its "88 Excitement Savings" last week. It offers customers rebates of $400 to $750 on selected 1988 models. The rebates can be combined with a direct-mail coupon and an option-package discount incentive on eligible vehicles.

Pontiac is offering $750 rebates on 1988 Pontiac 6000 and Bonneville models, $600 rebates on Fiero, $400 rebates on Sunbird and $400 on Grand Am. The program began Jan. 12. Vehicles must be purchased from dealer stock before Feb. 29.

No dealer financial participation is required. Pontiac also is offering dealers $1,000 on any 1987 model sold between Jan. 12 and Feb. 29. There are no sales targets in the dealer incentive program. Dealers had complained that putting incentives on the 1988 models made 1987s less attractive because of the small price differential.

Early-January auto sales 2% above slow '87 period

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DOMESTIC SALES

	Jan. 1-10, 1988	Jan. 1-10, 1987
Eagle	330	810
Chrysler	3,766	3,064
Plymouth	3,844	4,903

Honda	2,333	2,116
Nissan	878	1,087
Toyota	251	411
Mazda	83	—
U.S. Industry Total	110,363	107,735

Sales of domestic cars in the United States climbed a bit in early January with Ford Motor Co. responsible for much of the gain.

Deliveries of new cars rose 2.43 percent to 110,353 units compared with 107,735 a year earlier, when sales were unusually slow because income tax changes had just gone into effect. The changes knocked out the deduction for sales tax and reduced the deduction for interest paid on installment loans. The result was a new-car buying spree in December.

The Jan. 1-10 daily selling rate moved up 17.06 percent. The rate was 15,765 cars a day this year compared with 13,467 in 1986. There were seven selling days in this year's period and eight in last year's.

Ford Motor dealers delivered 33,115 cars in the Jan. 1-10 period, up 36.08 percent from 24,335 a year ago.

Honda, the only other company reporting a sales increase, retailed 2,333 units, up 10.26 percent from 2,116.

General Motors dealers delivered 9.10 percent fewer cars with sales at 59,368 units against 65,309 last year.

Chrysler Motors sales were off just 0.07 percent and totaled 13,985 cars vs. 13,995.

Toyota's sales fell 38.93 percent to 251 units from 411, and Volkswagen's fell 29.46 percent to 340 units from 482. Nissan deliveries were down 19.23 percent in the 10 days to 878 units from 1,087.

Ford Division sales were up 35.34 percent; Mercury's were up 47.13 percent; and Lincoln's rose 15.13 percent.

For GM, the major drop was at Cadillac with a sales decline of 50.44 percent.

PROBES

FROM PAGE 1

against Japanese light-truck manufacturers is being prepared by the MVMA. According to Steve Collins, MVMA director of international affairs, MVMA "is in the middle of a study on Japanese light-truck pricing."

Collins said MVMA undertook the study at the request of the U.S. Commerce Department. The Commerce Department, in turn, has been under pressure from members of Congress and the Big 3 to initiate an anti-dumping case against Japanese light-truck manufacturers.

Collins said MVMA expects to complete its study in late winter or early spring.

S. Bruce Smart, undersecretary of commerce for international trade, told a House committee last year he is convinced that foreign automakers have been dumping their products on the U.S. market, but bemoaned the fact that no domestic companies have filed formal complaints.

Under U.S. trade law, the Commerce Department may bring its own case against foreign companies. An action of that kind is unusual, although a successful Commerce Department case was brought on behalf of the U.S. semiconductor industry. For reasons of cost and diplomacy, the Commerce Department has historically preferred that U.S. industries prosecute their own cases.

A staff member of the International Trade Commission said GM has submitted a draft petition of an anti-dumping case against Hyundai to commission attorneys. Investigative attorneys have been reviewing the petition, although GM told the ITC it may not decide whether to file a case until late March.

Spokesmen for GM say they are not preparing a case against Hyundai and that reports to the contrary are "absolutely untrue".

According to trade commission sources, however, GM told the commission it will make a decision on whether to file a case based on several factors. These include the final resolution of the Canadian trade case.

The initial verdict in that case is under protest by Hyundai and will not be resolved until March or April of this year.

An ITC commissioner, who asked not to be identified, said attorneys for one of the domestic manufacturers have had discussions with commission attorneys about a possible case.

When told that GM is allegedly preparing an anti-dumping case, a Hyundai spokesman said, "Hyundai is not dumping automobiles or automobile parts in America. We feel strongly that our company offers the highest-value car in the subcompact segment. We are aware of the rumour that GM may be preparing an anti-dumping case against Hyundai, but we are treating the report as no more than a rumor."

The spokesman added that Hyundai's recent decision to raise prices resulted from meetings held months ago and is entirely unrelated to charges of dumping.

GM is in a unique position to file an anti-dumping case against the Korean auto manufacturer because of its first-hand knowledge of the country's production costs. GM has a 50 percent interest in Daewoo Motor Co., which last year began supplying LeMans models to Pontiac.

GM also may be capable of demonstrating injury by reason of Hyundai's pricing if domestic manufacturers continue to have difficulty selling cars to entry-level buyers.

Danforth's letter to Takeshita said, "If Japanese auto companies were to pass through the full effects of the shifts in the yen-dollar exchange rate — that is, if they were to adjust prices well beyond the 25 percent on autos and 20 percent on trucks that we have seen since September 1985 — I believe that the current economics of the marketplace must dictate that Japan's auto exports to, and market share in, the U.S. would drop dramatically below the existing restraint level.

"This cessation of dumping on the part of Japanese automakers, coupled with price restraint on the part of their American counterparts (the Big 3), would surely have a significant impact on our overall balance of trade.

"In the absence of this type of responsible behavior on the part of Japanese automakers, it is inevitable that Japan will continue to face both intense pressure for a sharp reduction in the restraint level and the very real threat of anti-dumping cases," Danforth said.

Sign of upturn for steel: Lakes boats race ice lock

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Some economists say filled order books in basic industries such as steel are an indication of a strong and growing economy.

DETROIT — Late last week, several iron-ore boats steamed down the Great Lakes in a race against winter's fast-approaching ice.

As Great Lakes Steel near Detroit had guests in to show off a $245 million piece of new machinery, two other steel companies were announcing price hikes.

Such vigorous signs of life may have surprised some who have been calling the steel industry moribund and maybe in some stage of rusty rigor mortis. News of such activity for the automotive industry is of the good and bad variety.

The shipping movements this late in the year — the latest since the mid-1970s — are a good indication the basic steel industry expects its production rates to continue strong in the months ahead.

In turn, some economists say filled order books in basic industries such as steel are an indication of a strong and growing economy — good news for car and truckmakers.

The steel company's visitors saw a new continuous caster and ladle metallurgy station that will sharply increase the company's casting capacity. Continuously cast steel is of higher quality than steel made by the older batch method, experts say.

The caster's completion caps a $500 million Great Lakes Steel capital spending program by its parent, National Steel Corp. Much of the outlay was aimed at satisfying automotive customers' demands for steel that is better in terms of such qualities as formability and chemical content and that is delivered just-in-time. The just-in-time feature is enhanced by reductions in the amount of scrap steel produced.

Kokichi Hagiwara, National Steel president, said the new machinery "will enable us to produce quality that will compare favorably with any steel company in the world."

The computerized facility has annual capacity of 2.2 million tons.

The price increases came from USX Corp., the country's biggest steelmaker, and from Bethlehem Steel Corp., the second largest. Prices were raised by amounts ranging from 4 percent to 8 percent, effective April 3.

Usually, other companies follow the leaders in the steel pricing game, and this time several said they were studying the price moves by the big producers. Prices of galvanized steel sheet, used increasingly in auto body panels, were not increased.

PRODUCTION

Auto output up for week, trails 1987

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Targeted domestic auto production of 111,300 cars last week was 5.66 percent more than the prior week's 105,338 but 31.84 percent below the year-ago week's 163,295.

Last week's scheduled production was divided as follows: General Motors, 41.37 percent; Ford Motor Co., 35.94 percent; Chrysler Motors, 11.32 percent; Honda of America Manufacturing Inc., 6.64 percent; New United Motor Manufacturing Inc., 2.92 percent; Nissan Motor Manufacturing Co. U.S.A., 1.20 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.61 percent.

Volkswagen of America's Westmoreland, Pa., plant resumes output today. The plant has been idle for inventory adjustment.

GM announced that production of the new all-wheel-drive Pontiac 6000 STE will begin in February at its Oklahoma City plant. However, a spokesman said overall output at the plant will not increase. The plant also builds the Buick Century and Chevrolet Celebrity.

The Oklahoma facility closed today for two weeks for inventory adjustment.

GM's Fiero plant in Pontiac, Mich., remains idle for inventory adjustment until Jan. 25.

Three GM plants resumed output today after being closed due to sluggish sales. They are: Lakewood, Ga.; Van Nuys, Calif.; and Linden, N.J.

Domestic truck output was estimated at 83,523 units last week, 7.70 percent more than the prior week's 77,551 and 6.41 percent more than the year-ago week's 78,502.

Year-to-date, 161,074 trucks have been assembled, 5.97 percent more than the 151,999 built last year at this time.

Ford announced it built its three-millionth light truck at its Wayne, Mich., assembly plant last Monday.

GM's Pontiac West plant in Pontiac, Mich., resumed output today. The plant had been idle for inventory adjustment.

Car-truck build rises in Canada

Canadian automakers scheduled production of 23,634 cars last week, 5.11 percent more than the previous week's 22,486 and 39.83 percent more than the year-ago week's 16,902.

So far this year, 46,120 cars have been built, 35.55 percent more than the 34,025 built last year at this time.

Truck output was targeted at 18,772 last week, 16.62 percent more than the previous week's 16,097 and 16.81 percent more than the year-ago week's 16,071.

Year-to-date, 34,869 trucks have been built, 8.73 percent more than the 32,069 completed last year at this point.

Chrysler Motors' Pillette Road plant in Windsor, Ontario, resumed output last week. The plant had been closed for inventory adjustment.

Nissan, Ford sign Europe tie

Patrol sport-utility may be 1st product

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Ford Motor Co. and Nissan Motor Co. last week signed a letter of intent providing for joint manufacturing of vehicles in Europe.

Sources at Ford's European subsidiary said the two companies have discussed several possible arrangements, including a production deal in Spain or Portugal. The United Kingdom was discussed as a site, but is believed to have been rejected.

The feasibility study is expected to take about a year to complete.

Such a move in Europe would mirror similar discussions between the two companies about joint manufacturing in North America and Australia. They also come at a time when the future of Ford's 24 percent shareholding in Mazda Motor Corp. is in question following recent top management changes at Mazda.

It is believed in Japan that Norimasa Furuta was installed as Mazda president with the backing of the company's principal shareholder, Sumitomo Bank. Sumitomo was apparently concerned that under former President Kenichi Yamamoto, Mazda was becoming too much like a division of Ford (Automotive News, Dec. 28, 1987) and the Ford-Mazda linkup could become less smooth in the future.

Combined European production was on the agenda last fall when Ford Vice Chairman Harold A. Poling and Nissan Chief Executive Yutaka Kume met in Tokyo.

A Ford of Europe official last week confirmed that the letter of

PROMO: *Oldsmobile, McDonald's team up in $110 million campaign*

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER
Copyright, 1988, Automotive News

Oldsmobile and the McDonald's Corp. hamburger chain will launch an estimated $110 million joint promotion on April 1 in connection with the introduction of Oldsmobile's new GM10 car, Cutlass Supreme.

Oldsmobile sources said last week that the division is planning to give away 500 Cutlass Supremes to winners of a new McDonald's Monopoly game and another 100 to instant winners of a matching card game played at Oldsmobile dealerships.

In addition, the division will offer coupons worth $400 to $2,000 off the price of a new Cutlass Supreme and cash prizes of $1,000 as part of the McDonald's Monopoly game.

There is no dealer financial participation required in the program except that Oldsmobile dealers must contribute half of the cost of the $5 McDonald's coupon books that will be given to consumers who test drive 1988 Cutlass Supremes at their stores.

Oldsmobile sources said both the division and McDonald's will promote the tie-in in an advertising campaign. Both employ Leo Burnett USA as their agency.

Oldsmobile dealers will merchandise the program in their stores and coordinate displays of Cutlass Supreme models at local McDonald's locations.

The launch of the 1988 Cutlass Supreme will represent the single biggest product launch in terms of advertising and marketing dollars in Oldsmobile's history, according to division officials. In addition to the McDonald's tie-in, Oldsmobile has planned a multi-media advertising campaign for the car's introduction.

Acustar sale a tough task for Chrysler

By Mary Connelly and Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Highly placed sources say Chrysler Motors decided to sell its Acustar parts-making subsidiary after the UAW negotiated job guarantees in new General Motors and Ford Motor Co. labor agreements.

However, the profit picture for the component-making operation and its diversity of products apparently has dissuaded potential buyers.

Although Chrysler labels as "pure speculation" Acustar's possible sale, a parade of major automotive suppliers have evaluated the $3 billion component manufacturer in recent months by invitation from the automaker.

Although some suppliers are said to be interested in acquiring parts of Acustar's operation, the company is currently insisting on selling the whole subsidiary. It has an estimated $1.1 billion in assets, 28,000 employees and 29 plants producing a wide range of components.

A spokesman from Sheller-Globe confirmed that the company looked at Acustar and expressed an interest in certain parts of its assets. "We continue to be interested in them," he said.

And a spokesman for Rockwell International said, "We've looked at it and, to the best of my knowledge, no decisions have been made at this point. It was fairly recently."

But the two companies that reportedly have expressed the most interest in Acustar are United Technologies Corp. of Hartford, Conn., and Harvard Industries of St. Louis. Harvard Industries officials were not available for comment.

Serious offers for the company or pieces of it began last fall, said sources, after the UAW settled labor agreements with GM and Ford.

Chrysler, which must negotiate a new contract with the UAW later this year, fears that an agreement patterned after the 1987 Ford and GM contracts would severely impact the company's profitability and, therefore, the long-range value and viability of Acustar.

Among other features, the GM and Ford contracts guarantee the jobs of their workforces — except those workers at plants already slated for closure — for the three-year span of the

FORD'S FUTURE

Fourth generation steps up to board

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — If the entry of the fourth generation of Fords to the Ford Motor Co. board of directors was inevitable, last week's election of Edsel B. Ford II and William Clay Ford Jr. to board seats should have surprised no one.

Among the Fords of their generation, the two cousins have shown the most promise within the company founded by their great grandfather.

For Edsel Ford, the 39-year-old general sales manager of Lincoln-Mercury Division, the appointment came four months after the death of his father, former company chairman Henry Ford II. William Clay Ford Jr., who at 30 is managing director of Ford of Switzerland, joins his father, Vice Chairman William Clay Ford, on the board.

But experts on board affairs pointed out that despite the logic behind it, the decision could not have come without careful consid-

Lutz, Bidwell inherit Sperlich's duties

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Corp. officers will gather today in a special meeting at which Chrysler Motors Executive Vice President Robert A. Lutz is expected to inherit many of the duties, if not the title, of retiring Chrysler Motors President Harold K. Sperlich.

Chrysler Motors Vice Chairman Bennett E. Bidwell is also expected to assume some of the responsibilities handled by Sperlich, who announced his retirement Thursday.

Sperlich said his decision to retire at age 58 after more than 30 years in the automotive industry was a personal one designed to give him greater freedom and was not part of a wider

LANCE GRAVES

Entry-level cars dropped

Olds, Cadillac develop replacements

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Cadillac is developing a vehicle that may be an alternative to the soon-to-be extinct Cimarron, while Oldsmobile likely will offer an entry-level Calais to replace the Firenza.

General Motors announced last week that it will stop selling the Cadillac Cimarron and Oldsmobile Firenza, both J-body compact-size cars, at the end of the 1988 model year. Production ends this spring.

The announcement came in conjunction with GM's decision to idle its Leeds assembly plant in Kansas City, Mo., on April 15. The plant produces the J-body Buick Skyhawk and Oldsmobile Firenza.

In recent years, Cadillac has been trying to decide what it should do with Cimarron and the "near-luxury," or lower end of the luxury market.

Cadillac General Manager John Grettenberger said the division has "in the development phase" an all-new vehicle exclusive to Cadillac. It would not specifically replace Cimarron or be a near-luxury model. Rather, it would fit into an entry-level luxury slot and probably would compete head-to-head with upscale models from Japan being sold through second distribution networks as well as with some European autos.

The new vehicle has not received corporate approval, nor has a timetable for its introduction been set, Grettenberger said. He also indicated that there may be more than one proposal for the all-new vehicle.

The vehicle, if and when it arrives, would be more expressive than the Cimarron and Cadillac's soon-to-be entry-level model, the Deville, Grettenberger said.

It will not, however, be an import from Opel, he added. Rather, he said he sees the new vehicle as an "opportunity to make a statement for American luxury cars."

Grettenberger has acknowledged that Cadillac looked at replacing Cimarron with the Senator, built by Adam Opel AG, GM's West German subsidiary.

It ultimately ruled that out, in part because of GM's plan to import Opel models through a separate dealer network as early as next year.

However, that plan may be in jeopardy or at least on hold as the dollar continues to weaken against the West German mark, making it less attractive to import the cars.

The decision to drop the Cimarron was a difficult one, Grettenberger said, and was made with the advice of the division's national dealer council.

"It became difficult to justify the Cimarron being in the middle of the pack of the near-luxury entries when our vision and image says we are to be at the top end of any segment we are in," Grettenberger said.

He said it also became difficult to justify the resources the division and its dealers had to put behind Cimarron when the sales returns were diminishing.

Sales of the Cimarron, which was introduced in 1981 as a 1982 model, climbed to a high of 24,209 in the 1986 model year but plummeted the following year to 14,651. Cadillac had projected sales to drop to 11,000 in the 1988 model year, but the car apparently isn't even going to live up to those expectations. Cadillac has sold only 1,893 Cimarrons so far in the model year (as of Jan. 10), which means the daily selling rate is off 57 percent from the 1987 model year.

Until a new model is brought into the Cadillac fold to fill the void left by Cimarron, Grettenberger said that the division will devote its resources to promoting Cadillac's exclusive 4.5-liter engine and other models in the line with more potential, including the new, stretched Eldorado, as well as De-

GM signs pact to build 2-liter engines in China

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

General Motors, as expected, has announced a major venture in the People's Republic of China, which initially involves production of 2-liter engines but could ultimately result in car building.

GM officials signed the agreement last Thursday with officials of China National Automotive Industry Corp. in Beijing.

GM described the agreement as a "multiphase umbrella agreement" under which the automaker will cooperate with various Chinese enterprises in a number of areas of automotive production designed to assist China in developing its automotive industry.

China's goal is to establish an automotive industry — vehicle production as well as component operations — within its own borders rather than import vehicles and parts.

GM declined to reveal the dollar amount of the deal with China.

The first step in the agreement covers the sale of equipment and licensing of related technology for the manufacture of a GM four-cylinder 2-liter gasoline engine, now used in a number of GM products including its J-body cars. The equipment will be shipped from a plant in Flint, Mich., to the Bei Nei engine factory in Beijing.

The engines will be used in non-GM cars and trucks now produced in China as well as for replacements. The plant eventually will produce 300,000 engines a year. Assembly is to begin in 1989.

The first phase of the agreement also is expected to include a foundry joint venture, an axle program and a project involving the manufacture of starter motors, distributors and alternators.

GM said details of some of the projects are likely to be announced in the next few months.

Some of those projects may be undertaken through joint ventures with other companies, and some may be undertaken by Chinese enterprises, Barton Brown, GM vice president in charge of Asian, African and international export operations, has said.

Brown said component operations, though initially focused on commercial light vehicles, likely will be adaptable to cars. He also said the component operations will be tied into existing Chinese vehicle programs to supplement or replace present component operations. Some components would be tied to future vehicle programs and some could be exported.

So far, nothing has been specifically negotiated on car production, but eventually the GM-China agreement could cover production of cars, GM President Robert Stempel has said (Automotive News, Jan. 11).

Fuji Heavy Industries, the Japanese maker of Subaru cars, has said it is conducting a "pre-feasibility study" with GM and a Chinese company, Second Automobile Works in Sian, on possible production of small cars.

Japanese press reports have said that the overall project would cost about in the billions of dollars with an annual production goal of 300,000 1.5-liter, front-wheel-drive models.

The Chinese government, in planning its future vehicle production, has shifted some of its emphasis, which had been purely on commercial vehicles. Cars will not be used by the masses but will be for people who manage companies and work in government as well as for taxis and for tourist lease.

The philosophy behind the GM-China deal was to establish a components base, which could be generating cash, before the Chinese begin an expensive car-production project.

Brown said the GM-China deal is designed to scale the program to Chinese resources, spread out hard currency expenditures and give the Chinese an opportunity to raise hard currency.

Lexus to debut at expanded 1989 Detroit show

DETROIT — The Detroit Auto Show will become the North American International Auto Show in 1989 and will be the site of the U.S. debut of Toyota's upscale Lexus Division models.

Ken Maeda, chairman of this year's Detroit Auto Show, said that an expansion of Cobo Hall, where the show is held every January, will allow the show to become "the Frankfurt show of North America."

"This is the motor city," Maeda said. "We had the first show here in 1899, and we're going to have the best auto show in the world."

The facility expansion will allow 200,000 square feet of additional floor space for cars. Maeda noted that some manufacturers, including Mercedes-Benz, have not displayed their products at the show because of a lack of space.

Others have wanted more space. He said Toyota already has written requesting 25,000 square feet for the 1989 show instead of its usual 14,000 square feet.

Maeda said Toyota plans to use the Detroit show for the U.S. debut of its Lexus line, its second distribution network.

He said the show committee is seeking commitments from other automakers to use the show to introduce new models.

The committee also will solicit commitments from domestic makers to make their top executives available on press day.

Calif. discounter spawned auto-dealer links

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Price Club, the California wholesale chain that apparently was the inspiration for discounters across the country to get into the car business, has met with mixed results since launching its auto program more than a year ago.

Price Club members buy imported and domestic vehicles at less than sticker price from dealers who pay the wholesaler a monthly advertising fee.

Similar systems are being adopted around the country by discounters with membership networks, including Sam's Wholesale Club and Amway (Automotive News, Nov. 9 and 16).

Other wholesale clubs, however, charge dealers a fee for each vehicle sold. In most instances, the fee is the amount over invoice price that customers are charged for the vehicle by the dealer.

Price Club membership is limited to business people and employees of financial institutions and state, federal and local governments. The company sells a broad range of products, from automobile tires to appliances and bulk food, at wholesale prices.

Robert Price, owner and founder of Price Club, declined to comment on the practice, saying, "I don't talk to trade papers."

Although Price Club has about 30 outlets in California, only those in the San Diego area currently offer members the option to buy Toyotas, Hondas, Nissans and Fords through dealers.

According to one dealer, however, Price Club is expanding the promotion into Orange County, Calif.

Chevrolets and Cadillacs were offered to members but agreements with the participating dealers were canceled by the company earlier in the year.

Automotive News discussed the system with the four dealers now associated with the Price Club. They offered mixed reactions to the program. One of the dealers said he is unhappy with it.

And the fleet manager of a Chevrolet dealership in Chula Vista said Price Club canceled the agreement with his dealership in July, saying its monthly sales were too low.

"Price Club told us other nameplates were outselling us," said John Merriman, fleet manager for South Bay Chevrolet. "They said the Chevy nameplate was no longer important to them."

Merriman said at its peak, the dealership sold about 40 vehicles per month through the system. At its lowest, the dealership moved half that many each month.

"It was very successful for us," said Merriman. "Customers were thrilled to know the numbers and totally shocked to know they could order a car from the factory the way they wanted it."

He said it accelerated the dealership's sales rate on ho selling vehicles like Corvettes and Astro vans, earning more vehicles for the dealership from the manufacturer.

"These were very sophisticated customers

Service Index climbs

November rises 12% after October dip

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The Automotive News Service Index sprang back strongly in November, following a slight dip in October.

The service and parts business at new-car dealerships rose 12.8 percent above the November 1986 figure.

In October, the Service Index fell 0.7 percent below the year-ago month.

Shop business during the first 11 months of 1987 was up 4.2 percent over the same period in 1986.

Service volume during 1987 had been relatively consistent, month-to-month, but November 1986 was a particularly weak month, hence the exceptional showing of the service index last November, a service representative at a domestic manufacturer noted.

Likewise, dealers and service managers did not report dramatic increases in business during November, but said business had been consistent or improving moderately throughout the year.

A service manager at a Ford dealership in a Midwestern farm state said business increased as a result of improvements in the local economy. He said local manufacturers have started to hire new employees and the farm economy is also looking up. As a result, customers are bringing cars in for repairs that they have been putting off.

A service manager for an Eastern Chevrolet dealership said his slight increase in shop business during November followed a trend for the year.

A Northwestern Dodge-BMW dealer attributed his outlet's service increase to the addition of a new Dodge mechanic.

The addition of one mechanic in a small shop gave the shop significantly more capacity. The dealer said he would have preferred to have hired a technician during the busy summer months.

"Good mechanics are hard to find," he said. "We wanted to find one to satisfy our needs and decided to wait until we found a good one. It's not worth our while to hire a poor mechanic because they don't last long and they make repairs that come back to the shop."

Sales of all parts and accessories led the business indicators in November with an increase of 15.3 percent over November 1986.

Gross profit on all labor, parts and accessory sales rose 15.2 percent over the year-earlier month; shop parts sales (customer paid and warranty) climbed 14.9 percent; repair orders written increased 9.6 percent; and total labor sales (customer paid and warranty) were up 8.9 percent.

Parts and accessories sales to off-premises customers rose 15.6 percent.

Sales of all parts and accessories led the indicators for the first 11 months of 1987 with an increase of 10.1 percent. Gross profit on all labor, parts and accessories sales rose 6.1 percent; shop parts sales climbed 4.5 percent; and total labor sales were up 2.2 percent.

Repair orders written fell 1.7 percent.

Parts and accessories sales to off-premises customers were up 6.3 percent for the first 11 months of 1987 compared with the same period in 1986.

Weekly bonuses hike quality in Chevy shop

By Roy Wirtzfeld
SPECIAL CORRESPONDENT

DULUTH, Minn. — Rathert Chevrolet here has initiated a technician bonus program that is paying off in increased productivity and fewer repair jobs returning to the shop.

Every Friday evening at quitting time, Larry Olson, service manager for Rathert Chevrolet, steps onto the shop floor with 12 envelopes — weekly bonuses for top technicians.

From his weekly productivity report, Olson calls out the top men. Technicians who complete repairs within 115 percent of the time allotted in the shop manual qualify for the bonus. Often among the winners are technicians who beat the time in the shop manual.

The envelopes are drawn in lottery fashion. Inside one envelope is a $100 bill, another contains $75 and another $50. The remaining envelopes contain $5 each. But 12 men may not qualify each week, so there is a chance that the top bonuses will not be won.

The incentive program is about six months old and was the idea of owner Jim Eggebrecht. In addition to productivity, the program encourages technicians to do quality work.

"The emphasis is not just on speed but also on customer satisfaction, for any returning work, of course, will tend to lower that worker's average," Eggebrecht said.

Rathert Chevrolet follows up on every service order by calling the customer to see if the job was done right, he added.

The dealership has recorded an 88 Customer Satisfaction Index rating during the past three months, up three points from its rating for the past 12 months, said Ted Dorenkamp, staff assistant, customer assistance in Chevrolet's Minneapolis branch office.

"An 88 is a high rating. . . . In the upper ranges of CSI, a three-point gain is a lot. It means 88 percent of customers think the dealer is doing a great job," Dorenkamp said.

All dealers in the Minneapolis region have recorded an 87 CSI rating during the past 12 months.

Rathert Chevrolet also keeps monthly productivity records and honors its top worker as "Service Technician of the Month."

The Technician of the Month earns a reserved parking space beside the main entrance to the service shop.

Service customers notice the sign on the parking space. It reminds them that the shop recognizes the achievements of its staff.

A different technician has won the top slot each month, indicating the overall quality of the service department, Olson said.

Warranties continue to change — some up, some down

SHOP TALK

ARTHUR FLAX

How far can car companies go with warranties? This year and last, domestic auto manufacturers and a number of Japanese automakers introduced extended warranties.

Yugo last week upgraded its warranty to include maintenance for the first year or 12,000 miles and added four-year/40,000-mile powertrain protection.

But on 1988 models, Volvo, which had one of the most complete three-year warranties in the industry, rolled back its coverage a bit. Volvo had covered virtually the entire car for three years or unlimited mileage.

The new Volvo warranty is still very good compared to those of other makes, but high-wear items that the company previously replaced under warranty are no longer covered.

For 1988, Volvo will continue to offer bumper-to-bumper coverage for one year/unlimited mileage. However, the three-year/unlimited-mileage warranty will cover only mechanical components. That coverage still includes such items as engine, brakes, steering, suspension, climate control and computerized control units.

Items that are no longer covered include shock absorbers and soft trim (seats, interior and exterior moldings, etc.).

"We provide coverage to protect the owner's investment, but owners must also do their part to protect the investment," said a Volvo spokesman.

Wear items like seats and shocks will last into high mileage if the owner takes care, but that is now the responsibility of the owner, he said.

The Volvo spokesman noted that dealers have seen cars with more than 100,000 miles on the clock that are still under warranty.

Steve Gerkens, service director at Delaware Oldsmobile-Volvo-Saab in Wilmington, Del., said the dealership has performed warranty repairs on three-year-old Volvos with 70,000 and 80,000 miles.

"The Volvo is a good car," he said. "But if you cover it for that long, it runs into money."

Other changes in the Volvo warranty for 1988 include the addition of five-year/unlimited-mileage coverage on seat belts and air bags and a six-month/unlimited-mileage break-in period that includes adjustments and alignments overlooked at time of delivery.

Last year, Porsche also cut back on its warranty. The company eliminated its five-year/50,000-mile powertrain warranty but kept its two-year/unlimited-mileage comprehensive coverage. That warranty is still in effect in 1988.

"One reason we offered a five-year/50,000-mile powertrain warranty was to battle the gray market (cars imported independently). The battle with the gray market was successful," said a spokesperson for Porsche Cars North America.

Goodyear warranty

Car companies aren't the only firms making warranty news. Goodyear has introduced a new radial tire for luxury cars with one of the strongest tire warranties in the industry.

The new Goodyear Double Eagle is a replacement tire aimed at owners of domestic luxury cars. The tire carries a 60,000-mile tread-wear warranty, free tire replacement for the life of the tread for defects in workmanship or material; road hazard and emergency road service coverage; lifetime balancing and alignment checks and tire inspection and rotation.

The new tire will be available in nine sizes, three more than the Double Eagle model it replaces.

Maserati assistance

Maserati Automobiles has introduced a roadside assistance plan that provides up to $75 in emergency towing or roadside assistance in the event of a warranty-related mechanical problem. Such non-warranty problems as flat tires, dead batteries or running out of gas are also covered. The program offers owners a round-the-clock toll-free number to call for help.

All 1987 and 1988 models sold after April 23, 1987, are covered by the Maserati Assistance Program for the first two years or 24,000 miles of Maserati's three-year/36,000-mile limited warranty.

In addition to roadside assistance, the plan provides trip-interruption benefits that include up to $500 in lodging, meals and alternate transportation if a breakdown occurs 150 miles or more from the owner's home.

The program is transferable to a new owner, should the car be sold during the coverage period.

New Goodyear Double Eagle luxury car tire carries one of the longest warranties

Counterfeit seals

CR Industries is distributing a free poster to help mechanics and fleet owners detect counterfeit oil seals. The poster describes identifying features of the company's "Scotseals" and simple tests to determine if seals are counterfeit.

The company will also exchange at no charge seals suspected of being counterfeit.

A first for a Saab deal

Spreens Saab in Hackensack, N.J., became the first U.S. Saab dealership to employ three master technicians.

Technicians Donald Scheibener, Nicholas Muti and John Arnot became master technicians by advancing through three intermediate levels of the Saab training program.

They also qualified by having five years' experience at a Saab dealership, by passing each of Saab's required technical courses and by becoming certified in the eight categories for which the National Institute of Automotive Service Excellence administers tests.

Technician awards

Ford Motor Co. and General Motors master technicians were honored at the National Institute for Automotive Service Excellence (ASE) board meeting in San Diego.

Steve Driza of Joe Rizza Ford in North Riverside, Ill., was honored by as the highest-scoring Ford dealership master automotive technician in the 1987 ASE test series.

Ray Schlecht of Contor's Motors in Neligh, Neb., was honored as the highest-scoring Ford dealership master truck technician.

Robert E. Petrosky, a GM and ASE master technician at Baytown Motors (Pontiac), Baytown, Texas, was honored as the highest-scoring GM technician in the ASE test series.

Alignment aids

Perfect Circle Chassis Parts has introduced six new color-coded shim assortments to align the rear wheels of most front-wheel-drive models from GM, Chrysler, Honda, Volkswagen and Audi.

Trucks flirt with 5 million to set sales record for '87

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Total U.S. truck sales were a shade below 5 million in calendar 1987, with most light, medium and heavy-duty segments scoring solid gains.

Manufacturers retailed a record 4,962,928 trucks last year, up 1.82 percent from the 4,874,070 sold in calendar 1986.

Light-duty truck manufacturers retailed 4,674,593 units, up 1.40 percent from 4,609,785 in 1986.

The 1987 light-duty total includes a revision for Ford, which earlier reported Class 4 Super Duty sales as part of its light-truck total. The 1986 number also includes some figures for Class 1-3 commercial truck retailers like Isuzu Truck.

Medium-duty sales, including Classes 4 to 7, totaled 157,179, up 3.81 percent from 151,414 in 1986, according to the Motor Vehicle Manufacturers Association.

Heavy-duty Class 8 sales of 131,156 were up 16.31 percent from 112,871 in 1986, according to MVMA.

Among the eight major companies in the heavy-duty truck market, seven had sales gains, with Kenworth showing the biggest increase.

Navistar, the Class 8 leader, had sales of 28,914 trucks in that segment, up 9.93 percent from 26,303 the previous year.

Freightliner, the No. 2 Class 8 retailer, also had the second-largest gain, with 23,350 sales, up 33.63 percent from 17,473 in 1986.

Third-place Mack had sales of 18,278, up 5.92 percent from 17,247 a year earlier.

Fourth-place Kenworth, with 14,018 sales, had a 34.05 percent increase over 10,457 retailed in 1986.

Ford just barely edged out Peterbilt for fifth place.

Ford's 12,796 sales were up 13.38 percent over 11,286 the previous year.

Peterbilt's 12,578 sales were up 25.88 percent over 9,992 in calendar 1986.

Seventh-place Volvo, with 10,840 sales, was off 4.59 percent from 11,361 retailed in 1986.

And GMC, which is now officially under Volvo's domain, retailed 7,308 Class 8s in 1987 for a modest 1.09 percent increase over 7,229 in 1986.

Auction advertising builds strong auction traffic.
You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.
Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

Manheim adds California auction

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Manheim Auctions hopes to capture more factory and daily rental program vehicles with the opening Tuesday of its $10 million Riverside Auto Auction in Riverside, Calif.

The company has two other auctions in the state, including California Auto Dealers Exchange in Anaheim only 30 miles from Riverside.

Manheim views Southern California as an important and lucrative center for used cars. Despite their proximity, the company said it can support two Manheim auctions serving different market segments.

Even though there are 10 auctions in California, Darryll M. Ceccoli, Manheim vice president of operations, said there are only three major auctions in Southern California — Southern California Auto Auction in Fontana and Los Angeles Dealer Auto Auction in Rosemead, both owned by competitor GE Credit Auto Auctions, and California Auto Dealers Exchange.

Ceccoli said the California Auto Dealers Exchange and the Los Angeles Dealer Auto Auction have limited acreage available for storage, which is necessary if an auction wants to attract daily rental and lease vehicles.

Riverside's 40,000-square-foot facility sits on 70 acres and will enable Manheim to go after national accounts. Manheim has improved 25 acres, leaving plenty of room for expansion.

Chrysler Motors has picked Riverside to conduct its factory sales.

He said about 1,500 cars will cross the auction block at the grand opening tomorrow, including 800 daily rental vehicles, 250 Nissans and 400 to 600 dealer consignments.

AUCTION DATES

Chrysler Motors

Jan. 26 — Florida Auto Auction of Orlando, Ocoee, Fla.; Arena Auto Auction, Chicago; Hatfield Auto Auction, Hatfield, Pa.; Dallas Auto Auction, Grand Prairie, Texas; and Aptco Auto Auction, Taylor, Mich.

DISCOUNTER

FROM PAGE 3

who were comparing prices," he said. "Sixty percent of them were ordering cars from the factory, so there was no investment by the dealership."

An official from the state's Department of Motor Vehicles said Price Club presented the program to the agency six months ago. But the wholesaler wanted to charge dealers a fee for each vehicle sold to its members. The department's advice: Apply for a dealer's license.

Per-vehicle fees for referrals in California violate state brokering laws, the agency spokeswoman said. Price Club instead decided to charge dealerships a monthly advertising fee for placing their circulars in its wholesale outlets.

Bill White of Lee White Toyota in Lemon Grove sells about 15 cars per month using the system, down from 30 when the dealership signed on more than a year ago. The dealership pays Price Club about $1,000 per month.

White said sales fell when other dealers in the San Diego area matched prices his dealership offered through the Price Club system.

The dealership charges Price Club members $750 over invoice for Toyota Corollas, Camrys, 4Runners, Land Cruisers, Cressidas and Supras; $400 over invoice for Celicas, Tercels, MR2s, FXs and LE passenger vans; and $100 over invoice for trucks, other vans and panel vans.

Amway, by comparison, markets cars for $150 over invoice, and Sam's offers them to members at $100 over dealer invoice.

White said the manufacturer's suggested retail price for a car like the Camry LE includes a profit of about $2,000 for the dealer, so customers are realizing a saving of $1,200 to $1,400 off the sticker price under the system. Circulars are distributed from four Price Club outlets in the San Diego area.

Chris Gordon, general sales manager for Team Nissan in Encinitas, sells cars and trucks through Price Club for a flat $300 over invoice. He said Team Nissan is the wholesaler's "preferred Nissan dealer."

Team Nissan has used the system for more than a year, selling 12 to 20 cars per month.

He said there is a display in each of the four (soon to be five) Price Club outlets in the San Diego area advertising "special fleet discounts" from the preferred dealers. The display carries flyers from each of the four dealers.

Gordon praised the system, saying Price Club members are qualified, have good credit and "are usually ready to drive a car away."

Most of his sales are vehicles in stock. The dealership adds 3.9 percent to the $300-over-invoice price for vehicles ordered by members.

Is it worth it for a dealer to sell a vehicle for $300 over invoice? Gordon said that is just part of the final deal.

Half of the customers finance the cars through a Team Nissan lender, seven of 10 members buy a warranty from the dealership and three of 10 have a trade-in. Some of them buy paint sealant and credit life.

"It's no longer a $300-over deal when you put the front end and back end of the deal together," he said.

Gordon said he pays Price Club $300 per month to distribute the flyers and another $1,100 per month for the back page of Price Club's monthly customer journal, which reaches 200,000 members.

"I believe they are expanding their advertising into Orange County because they have asked the dealership to advertise in that journal," he said.

LLoyd Boshaw, general manager for Pacific Honda in San Diego, said the dealership signed up with Price Club six months ago and is selling a dozen units per month under the system.

"I don't like the program because I don't like any reference to invoice," he said. "The industry should get away from that."

Boshaw said the dealership has an exclusive agreement with Price Club to market Hondas through outlets in the San Diego area. He is still involved with the program — even though he said it represents a miniscule portion of his business — because "I won't give it up to another dealer."

Jim Hilton, sales manager for Pacific Beach Ford in San Diego, confirmed the dealership is involved in the Price Club program but declined comment on it, citing company policy.

Production climbs for cars, trucks

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled domestic production of 126,735 cars was 9.62 percent more than the prior week's 115,618 but 19.26 percent below the year-ago week's 156,961.

Companies split last week's targeted output as follows: General Motors, 41.54 percent; Ford Motor Co., 32.94 percent; Chrysler Motors, 13.73 percent; Honda of America Manufacturing, 5.90 percent; New United Motor Manufacturing Inc., 2.56 percent; Volkswagen of America, 1.58 percent; Nissan Motor Manufacturing Co. U.S.A., 1.06 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.69 percent.

GM announced it will close its Leeds plant in Kansas City, Mo., in mid-April. The Buick Skyhawk will be transferred to the Janesville, Wis., plant and the Oldsmobile Firenza will be discontinued. As a result, about 3,500 workers will be indefinitely laid off. At the end of May, GM will discontinue production of the Cadillac Cimarron, which is built at Janesville.

GM's Fiero plant in Pontiac, Mich., and its Linden, N.J., plant resumed output today. The Fiero plant had been closed for two weeks because of slow sales, and the Linden facility had been idle for equipment installation.

Production resumed today at GM's Detroit-Hamtramck plant. It had been closed to retool for the 1989 Riviera. However, production of the 1989 model is not slated to begin until next fall.

GM's Oklahoma City plant remains closed for inventory adjustment. It is due to reopen Feb. 1.

Domestic truckmakers estimated production of 84,494 units last week, 2.59 percent more than the prior week's 82,359 and 9.92 percent more than the year-ago week's 76,872.

General Motors slated overtime last Saturday at its Baltimore plant.

Ford slated overtime last Saturday at its Wixom, Mich.; Kansas City, Mo., (car); and St. Louis plants.

All Ford car and truck plants are scheduled for daily overtime this week except the Edison, N.J., car plant.

Canada trucks: 19-month high

Canadian makers scheduled production of 19,337 trucks last week, the highest since the 19,807 built the week-ended June 21, 1986.

Last week's truck estimate was 6.36 percent more than the prior week's 18,181 and 31.80 percent above the year-ago week's 14,671.

Year-to-date, 53,615 trucks have been built, 10.10 percent more than the 48,697 completed last year at this time.

Auto production was scheduled at 20,526 units last week, 9.70 percent below the previous week's 22,732 but 2.91 percent above the year-ago week's 19,945.

So far this year, 65,744 cars have been assembled, 19.66 percent more than the 54,941 assembled last year at this point.

Chrysler outlines plans for products into 1990s

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Motors executives met with officers of the Chrysler-Plymouth and Dodge dealer councils last week and outlined tentative product plans through the 1990 model year.

In an unusual showing of cooperation between a manufacturer and dealers, Chrysler Motors Chairman Gerald Greenwald and Chrysler Motors President for Product and Marketing Bennett E. Bidwell reviewed the tentative future product lineup that dealers will now evaluate.

Representatives of Chrysler's Jeep-Eagle network did not attend the meeting. However, they will get a new product to sell this summer: A four-door sedan version of the all-new Mitsubishi Mirage will be unveiled at the Chicago auto show Feb. 12.

Chrysler's product plans are being formulated against a background of internal flux and personnel changes. The acquisition of American Motors and the executive reshuffling resulting from the retirement of President Harold K. Sperlich have added to the turmoil.

Sperlich's retirement is blamed in part by company insiders on the controversy over future products.

The shifting product plans are being formulated during a period of financial belt tightening at Chrysler and increasing pressure by dealers for a strong product commitment.

The tentative product plans through the 1990 model year include several changes in the Chrysler-Plymouth and Dodge lineups. The schedule indicates that models will benefit from increased engine power when Chrysler begins building a new V-6 in late 1989 at its Trenton, Mich., engine plant. Specifically:

● The LeBaron J-coupe, which some dealers have said is faltering in the market because of its four-cylinder engine, will receive a V-6 in the 1990 model year. It is not yet clear if Chrysler will use its own engine or a Mitsubishi-built powerplant.

The LeBaron coupe is also tentatively scheduled in the 1990 model year to get a new suspension and interior.

see CHRYSLER, page 7

Tentative Product Plans for Chrysler Motors

CHRYSLER PLYMOUTH

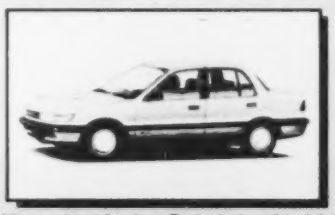
1988 — Launch of Chrysler TC by Maserati.
1988 — Town and Country wagon ends production.
1989 — Caravelle, Reliant, LeBaron K end production.
Spring 1989 — Launch of Diamond-Star Plymouth Laser.
1990 — Launch of Imperial and New Yorker Fifth Avenue; New Yorkers get four-speed electronic transmissions; Plymouth Sundance updated; LeBaron adds V-6, new dash, interior and suspension.

Jeep Eagle

Winter 1988 — Continue push on Eagle Premier, new for this model year.
May 1988 — Relaunch Renault Medallion with Eagle badge.
July 1988 — Launch four-door version of Mitsubishi Mirage as 1989 model.
1989-1990 — Add a version of two-door sporty coupe built by Diamond-Star joint venture of Chrysler and Mitsubishi in Illinois.

CHRYSLER DODGE

1989 — Long-established Aries, 600, Diplomat products will no longer be produced after this model year.
1989 — New A-body is slated to be introduced in this model year.
1990 — Shadow updated this model year.
1990 — Although uncertain, Daytona may be updated and Dynasty ES may be launched during this model year.



Mirage slated for Jeep-Eagle dealers this July

1990 Imperial in current Chrysler commercial

Audi picks another new boss

Mugg takes post as Marcy steps out

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

The head of Audi of America quit last week after four months on the job, while a group of leading dealers raised questions about the leadership at Audi's parent company, Volkswagen of America.

Other troubles echoed throughout the organization. Audi, which has seen its U.S. sales nearly sliced in half in just two years, said it gave layoff notices Friday to about 10 employees at its Troy, Mich., headquarters. And more could follow.

Richard C. Marcy, who took over as VWoA vice president in charge of Audi of America in September, resigned unexpectedly Monday. He called the move a "career growth opportunity." On Tuesday, he began his new job as executive vice president in charge of sales and marketing at C&C (Cars and Concepts), the Brighton, Mich., car conversion and engineering firm.

VWoA promptly named Richard L. Mugg, 57, to fill Marcy's spot. Mugg has worked for VW for three decades, most recently as vice president of VWoA's central marketing staff.

One of his first challenges will be to address the concerns of Audi dealers. Two weeks ago, about a dozen influential Audi dealers gathered in Dallas for what was described as a meeting about the future of the franchise. Although it involved some members of the dealer council, the session was held outside standard company channels.

In the short term, the dealers want the company to adopt programs that will revive sales and ignite some interest in the new Audi 80/90 series, dealers said. They are also pushing for measures that will address the long-term stability of the nameplate. Overall, they hope to help establish a clear sense of direction.

As part of that process, they are seeking a meeting with Volkswagen AG Chairman Carl Hahn. And while dealers portrayed themselves as non-militant "friends of Audi," they pointed to concerns with Audi's senior management. Some conceded that one subject of their frustration is Noel Phillips, president of VWoA.

"We just have to look at where we've been, look at the crises that we've been through, and sooner or later the buck has to stop somewhere," said one dealer. "You can't have musical managers without questioning who is ultimately re-

Record 25,000 due to attend NADA parley

SAN FRANCISCO — A record 25,000 delegates are expected to gather starting Saturday for the 71st Annual Convention and Exposition of the National Automobile Dealers Association.

General Motors Chairman Roger B. Smith and former President Gerald R. Ford will address the dealers during the convention, which runs through midday Tuesday, Feb. 9.

Nearly 300 firms will exhibit equipment, products and services for auto and truck dealerships. For the first time, the show will occupy two sites, Brooks Hall and the Moscone Center, for an exhibit area of more than 170,000 square feet. It opens at 8:30 a.m. on Saturday, Feb. 6.

The opening general session begins at 3 p.m. Saturday in the main arena of Civic Auditorium, adjoining Brooks Hall. Keynoter Smith is expected to address the importance of dealer-manufacturer communications, integration of

Subaru fights back

1987 routed complacency, Lamm says

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

CHERRY HILL, N.J. — Subaru of America has gone back to the street-fighter ways that made it the hit of Wall Street.

The company that was derailed in 1987 after 12 years of consistent growth in sales and profits has set an annual sales goal of 250,000 to 300,000 units within three years, compared with just over 177,000 last year.

Harvey Lamm, chairman of the board and a founder of the company, now admits that the years of soaring stock prices, profits and sales may have made the company soft. "Perhaps a tendency toward some complacency did creep into the organization," he said. Last year "jarred everyone back to reality," he added.

Shock it was. The stock tumbled

Isuzu cancels plan to import Bitter models

By Francis J. Gawronski and Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTERS

LOS ANGELES — American Isuzu's plan to import and market 10,000 Austrian-built Bitter cars a year was abruptly canceled last week.

Erich Bitter, president of Bitter Automobile Co., and executives of American Isuzu, including John E. Reilly, senior vice president and general manager, negotiated a settlement that will reimburse Bitter for development and tooling costs. The final meeting last Thursday at Isuzu headquarters, ended two weeks of dickering.

The end of the deal wipes out the sole accomplishment of American Isuzu's ambitious global search for an offshore vehicle supplier. The Bitter deal was announced in June.

American Isuzu has been unable to find another non-U.S. manufacturer at either the upper or lower end of the market to supplement the importer's modest annual quota of passenger cars under the Japanese government's current restraints on car exports to the

Outspoken Perot claws GM, tells how he'd run it

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

Never one to mince words, H. Ross Perot is at it again.

The Texas billionaire who was paid $700 million last year to relinquish his seat on the General Motors board and the helm of Electronic Data Systems, has authored an article in the Feb. 15 issue of Fortune magazine entitled, "How I Would Turn Around GM." His article is part of a scathing cover section on GM's problems.

Perot's basic premise is that GM must build the finest cars in the world and must make its employees understand that their jobs depend upon achieving that goal.

Among the 13 moves Perot says GM must make:

- Replace outside board members, who, Perot notes, own virtually no GM stock. The replacements should be substantial stockholders and should be selected for their demonstrated abilities to design and build excellent products as well as to lead and motivate people.
- Close the 14th floor of the General Motors Building in Detroit where top executives have their offices and move the executives to the plants, forcing GM's leaders to brush up against "real" people building real cars.
- Establish one set of rules for bonuses and financial incentives instead of having two systems whereby management receives million-dollar bonuses and the workers receive nothing in profit sharing. "First feed the troops, then the officers," Perot advises.
- Eliminate waste, including chauffeured limousines, heated garages, executive dining rooms and other "relics from the past." He also recommends closing the 25th floor of GM's building in New York, used once a month by the board. "An entire teak forest must have been decimated" for the 25th floor, Perot says.
- Focus the $4 billion GM spends annually for research and development on projects to build the finest cars in the world. The first priority, Perot writes, should be fixing substandard items on today's cars.
- Eliminate historic power struggles between the financial staff and car builders: "Let people who know how to build the cars make product decisions."
- Focus the battle on outsiders in the marketplace, not on divisional internal struggles "for power and turf."
- Listen to customers, dealers, workers and engineers. Look at customer problems as service problems that need solving immediately, not as legal problems.
- Use the full resources of GM employees as substitutes for money. "If spending money were the answer," Perot writes, "GM would already be first and best at everything it does."

In the same issue, GM Chairman Roger B. Smith is interviewed in an article entitled, "Roger Smith Replies to Ross Perot." However, GM claims it did not know the interview was to be in response to the comments of EDS founder Perot.

In the interview, Smith praises GM's 1984 reorganization into two large car groups as a way to use people more effectively, delegate more decision-making to lower levels and encourage a participative structure. Smith says GM does not ignore customer complaints; on the contrary, he and others often call customers.

Smith also defends GM's bonus structure for managers. GM's philosophy, he says, is to pay a low salary and high performance bonus to executives.

He says that GM has the "best cooperation between management and the union in the corporation's history right today," citing last fall's contract talks as proof.

Tanuma: U.S.-designed, built Nissan will appear by 1992 model year

New thrust at Nissan

Design unit to play major role in U.S.

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Nissan Research & Development said its reorganization, effective today, means it will have complete design and engineering capabilities to develop cars and trucks for the U.S. market.

It also will determine what products will be developed and when they will be introduced.

A similar reorganization aimed at localization of products and long- and mid-range product planning will be announced for Nissan's operations in Europe in six to 10 months.

Nissan Research & Development is a jointly owned subsidiary of Nissan Motor Co. Ltd., Japan, and Nissan Motor Corp. in U.S.A. Takeshi Tanuma is president.

"The reorganization will permit us to respond quickly to changing attitudes and needs of local customers," Tanuma said. A U.S.-designed and built Nissan car will reach showrooms in the 1992 model year at the latest, he said.

The reorganized Nissan Research & Development facility will be responsible for strategy, technical planning, vehicle development and testing, Tanuma said at a press conference here.

He also said the new structure will allow the company to boost customer satisfaction and, largely through increased local content, reduce its costs.

After the reorganization, Tanuma will remain based in Ann Arbor, Mich. The number of Nissan Research & Development employees will climb to 250 from 55 now. New employees will be Americans, chiefly working in Ann Arbor, and most will be engineers.

"The reorganization will permit us to respond quickly to changing attitudes and needs of local customers."
— Tanuma

A vehicle engineering department, directed by Tohru Kanbe, executive vice president, will be located in Ann Arbor and have operations in Arizona and Los Angeles. Kanbe has been vice president for engineering — Nissan U.S.A.

A new-product strategy department will be located in Los Angeles and a computer-aided design center will open in the Detroit area in the fall of 1989.

The European reorganization will not be directly related to a Nissan-Ford plan to jointly produce a minivan for the United States or a sport-utility vehicle in Europe. An announcement of what product will be designed is expected to come in the second quarter, Tanuma said.

Local content of cars and pickups built by Nissan in Smyrna, Tenn., ranges around 50 percent to 55 percent. Tanuma said he expects it to rise to at least 75 percent "as soon as possible" and 90 percent to 95 percent may be a realistic target.

Kenosha dies, so may M-body

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors' decision to close its Kenosha, Wis., assembly plant at the end of the 1988 model year may be a signal that the company is preparing to shed some of its older products.

The company announced last week that the Kenosha assembly and stamping operations will be closed because of excess capacity that resulted from the acquisition of American Motors.

Kenosha is producing the subcompact L-body Dodge Omni America and Plymouth Horizon America and the large, rear-wheel-drive M-body Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury. The America models will go out of production in July at Kenosha and move to the Jefferson Avenue assembly plant in Detroit. It will be the second move for the America models. The company spent $200 million last summer to move them to Kenosha from Belvidere, Ill.

That six-month interruption cost Chrysler 162,000 units in 1987, the company said, and it contributed heavily to a 22 percent drop in Chrysler's 1987 domestic-car sales. Chrysler said the move to Jefferson Avenue will be accomplished more quickly.

"There will be minimal interruption of production," a spokesperson said. The company said no timetable has been established. However, Aaron Taylor, president of UAW Local 7, which represents workers at the Jefferson Avenue plant, said a tentative schedule calls for a production launch in September.

Chrysler said the M-bodies will continue to be produced in Kenosha until September. The company said the future of the models beyond the 1988 model year will be determined by the market.

Dealers have said Chrysler's new large front-wheel-drive sedans — Chrysler New Yorker, New Yorker Landau and Dodge Dynasty — are being sold to customers who would have purchased the older rwd models. They expect the M-bodies to be retired at the end of the 1988 model year, barring a spectacular performance by the Fifth Avenue.

The closing affects two additional older products — the compact K-cars (Plymouth Reliant, Dodge Aries) and the E-bodies (Dodge 600, Plymouth Caravelle). Both series are built in the Jefferson plant, which will produce the America subcompacts. Chrysler said the future of the K- and E-bodies after the 1988 model year will also be dictated by sales.

The K-cars are also produced in Newark, Del. That plant will be retooled this summer to produce the A-bodies, which are designed to replace the K-cars.

Kenosha's closing means Chrysler will operate 12 plants in North America. Asked about other closings, a Chrysler spokesman said, "We don't have any additional plant closings in mind at this time."

The closing of the Kenosha plant, which was built in 1902, will affect an estimated 5,500 hourly and salaried workers. About 1,000 employees will remain to operate the Kenosha Jeep engine plant.

Wisconsin Gov. Tommy G. Thompson asked the state attorney general to investigate initiating a lawsuit against Chrysler on the grounds that the company had broken a verbal and written agreement with the state assuring production at Kenosha for five years.

"Chrysler never made such a commitment," a Chrysler spokesman said.

Rudy Kuzel, chairman of UAW Local 72 at the Kenosha plant, said, "I guess they (Chrysler) feel they owe the people at Jefferson more than they owe us."

AMC was headed for big profit

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

American Motors would have earned about $200 million in 1987 if it had not been acquired by Chrysler Corp.

A recent informal study by Chrysler staffers revealed a pro forma AMC profit of $200 million, according to a former AMC senior executive, although Chrysler write-offs against the profit lowered the number to $125 million.

But don't expect to see either number included in the Chrysler year-end financial statements that are scheduled to be reported later this week.

Officially, Chrysler says it is not possible to conduct that kind of study or separate the AMC results.

"AMC made about $50 million in the first six months," said the former AMC executive, who asked not to be identified. "Even with the write-offs, it made $75 million in the last six months, and that was without any cars."

Chrysler's financial staff wrote off some $75 million against the $200 million profit, according to the former AMC executive, including the launch of the Premier, which debuted the final week of the year; a $20 million settlement with Emerson Electric; and development costs for the D59 coupe, which was killed by Chrysler after the acquisition.

It is unlikely that the accomplishment — going from a $125.6 million loss in 1985 and a $91.3 million loss in 1986 to a $200 million profit in 1987 — will ever be officially recorded, even as a footnote in the Chrysler Corp. annual report.

"It's a tender subject with Chrysler," the executive said.

Automotive News Staff Reporter Mary Connelly contributed to this report.

AutoWeek names new publisher

DETROIT — Leon Mandel has been appointed publisher of AutoWeek, the only consumer automotive newsweekly in the United States and the largest-circulation publication in the 24-magazine Crain group, which includes Automotive News.

Mandel

Mandel was editor-in-chief of AutoWeek from 1983 until 1986 and has been editor-at-large for the last year, in New York on a special writing assignment. Mandel is a veteran automotive writer, broadcaster and the author of six books including a biography of the late William Fisk Harrah and a history of the American auto industry, "American Cars." He was chief editor of Car and Driver and senior editor of Motor Trend.

Keith E. Crain, Crain Communications vice chairman, becomes AutoWeek editorial director. "The appointment of Mandel as publisher completes a long-term plan to give the American auto enthusiast a weekly publication of the same kind and stature that exists in virtually every other country in the world," Crain said.

SALES

Tempo picks up in mid-January

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of United States-made new cars in mid-January soared almost 50 percent above those of 1987.

Retail sales in the Jan. 11-20 period climbed to 186,385 units, up 48.19 percent from 125,774 a year earlier.

Some of the gain reflects action taken in Washington that produced a temporary run-up in sales more than a year ago.

Sales in the closing periods of 1986 were very strong as buyers bought cars to beat a federal personal income tax change that ended a special auto sales tax deduction. As a result, sales in January last year were depressed, industry observers agreed.

Also last year, low-interest financing was being offered on only a few lines of cars. This year, incentives in the form of cash rebates or reduced interest rates were prevalent in the period.

Too, there were 10 selling days in mid-January this year and nine a year ago.

L.R. Windecker, research and analysis manager at Ford Motor Co., cited the sales tax and incentives background and said he was not surprised by the mid-January sales increase.

"There is nothing particularly unusual about it. It fits in the normal, long-term sales pattern. Remember, we are comparing a very good period this year with a very poor period last year," he said.

At General Motors, Claude N. Moore, vice president in charge of the customer sales and service staff, reported a hefty gain for his company and referred to "last year's relatively slow pace."

Even with those factors dominating the statistical picture, however, deliveries of some car lines were exceptionally strong.

The new Lincoln Continental and Ford Taurus and Escort and Mercury Sable were among the hot sellers at Ford Motor Co.

At Chrysler Motors, sales of the Chrysler LeBaron and Fifth Avenue and Dodge Daytona were outstanding.

At GM, the standard Cadillac was a a strong seller, as were the Oldsmobile 88 and the new Buick Regal.

Pontiac General Manager J. Michael Losh called the mid-month period the best since August.

Nissan, with a sales dip of 15.59 percent, was the sole domestic car builder reporting a decline.

A sales gain of 79.87 percent was reported by Ford Motor and a gain of 76.56 percent was reported by Toyota. Honda noted an increase of 60.43 percent.

Chrysler reported a rise of 43.89 percent; GM, a gain of 34.11 percent; and Volkswagen, an increase of 31.35 percent.

Mazda, which began making cars in this country last fall, sold 362 U.S.-built autos in mid-January.

The daily selling rate in the period averaged 20,709 units this year vs. 15,722 a year ago.

ALABAMA

AUTO DEALERS EXCHANGE
of BIRMINGHAM
Proudly Presents
GENERAL MOTORS FACTORY SALE
TUESDAY, FEBRUARY 9th - 10:00 A.M.

Below Is a List of the Day's Events:

I. 500-600 G.M. UNITS—Cleaned the Birmingham way. You will not find G.M. Factory units more front-line ready than you will at A.D.E. We take "pride" in having the best reconditioned vehicles in the country.—Come judge for yourself.

II. Free Southern Country Breakfast—Country Ham, Eggs, Grits, Home Fries and Home Made Biscuits & Gravy.

III. Free Steak Dinner — Immediately following the sale. All GM dealers are invited to a Free Charcoal Broiled Steak Dinner with all the Trimmings. This will be served in our on-the-premises restaurant.

IV. Free Airport Pickup—Convenient lodging at the exclusive Rime Garden Inn where A.D.E. special rates for suites are $56 per nite (The motel on the auction premises could possibly be ready for occupancy for this first sale). Call Gayle today for Auction Registration and Motel Reservations (205) 699-1010.

V. The most relaxing atmosphere you will ever experience at any auction with genuine Southern hospitality and service at its best where your courteous treatment is our first concern.

(Eastbound on I-20 exit 144,
Westbound on I-20 exit 144.)

PRODUCTION

Auto output 27% below 1987 week

By Karen Detkowski
SPECIAL CORRESPONDENT

U.S. auto production last week totaled 126,388, 1.08 percent less than the 127,768 built in the prior week. The total was 27.33 percent below the 173,911 cars assembled in the same week last year.

Companies shared last week's estimated output as follows: General Motors, 42.91 percent; Ford Motor Co., 31.47 percent; Chrysler Motors, 14.16 percent; Honda of America Manufacturing Inc., 5.41 percent; New United Motor Manufacturing Inc., 2.57 percent; Volkswagen of America, 1.58 percent; Nissan Motor Manufacturing Inc., U.S.A., 1.06 percent; and Mazda Motor Manufacturing U.S.A. Corp., 0.84 percent.

Chrysler will close its Kenosha, Wis., assembly plant at the end of the 1988 model year. The plant builds Horizon America, Omni America, Gran Fury, Fifth Avenue and Diplomat. Horizon and Omni production will be transferred to the Jefferson Avenue plant in Detroit.

Volkswagen of America announced it will end operations at its Westmoreland, Pa., assembly plant on July 21.

Jetta production will cease March 31. The plant then will go down for five weeks and will return to build Golfs until July 21. About 2,500 workers will lose their jobs when the plant closes.

Domestic truck production was steady last week at 84,750 units, 0.32 percent above the previous week's 84,478 and 9.90 percent above the year-ago week's 77,117.

Chrysler's Dodge City truck assembly plant in Warren, Mich., will close today for inventory adjustment. Production will resume Feb. 15.

Chrysler scheduled overtime at its St. Louis (No. 2) truck plant and its Toledo Jeep plant last Saturday.

Ford slated overtime last Saturday at its Twin Cities truck plant. Daily overtime is scheduled this week for all Ford car and truck plants except the Edison, N.J., car plant.

GM scheduled overtime at its Baltimore; Flint, Mich.; and Moraine, Ohio, plants last Saturday.

Cars, trucks rise in Canada

Canadian makers continue to increase output with 19,525 trucks produced last week, 1.29 percent above the prior week's 19,277 and 24.78 percent above the year-ago week's 15,647.

So far this year, 73,080 trucks have been built, 16.10 percent above the 62,948 units completed last year at this time.

Last week's scheduled auto production of 24,096 was 23.92 percent above the previous week's 19,445 and 15.07 percent above the year-ago week's 20,941.

Year-to-date, 88,759 cars have been produced, 18.25 percent above the 75,062 assembled last year at this point.

Honda of Canada Manufacturing Inc. is expanding its Alliston, Ontario, assembly plant and will add the Civic hatchback in April.

NISSAN WOES

Execs admit mistakes, start long road back

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

CARSON, Calif. — The set of crystal glasses was a holiday present a touch too generous. Its value was just above the official, but usually unenforced, corporate limit on gifts from vendors to Nissan Motor Corp. in U.S.A.

"I wasn't quite sure what to do with it," said a mid-level manager. "Then we all got a carbon of the letter (Senior Vice President Thomas) Mignanelli sent to Chiat/Day (Nissan's new advertising agency) explaining why he was returning his gift."

The manager followed suit and returned his the next day.

Mignanelli's message was clear: It is not business as usual at Nissan.

Mignanelli, the latest in a long line of former Ford Motor Co. executives to leave Dearborn for Nissan's Southern California offices, has been a take-charge top American official since he unexpectedly inherited the reins from C.P. "Chuck" King, who retired abruptly last summer, only weeks after recruiting Mignanelli.

Nissan's U.S. operations have undergone a massive reorganization in the past year, reflecting similar changes in the Japanese parent company.

The goal of Nissan U.S.A. is expressed by President Kazutoshi Hagiwara: "We want to gain the No. 1 import position."

That is no easy task. Nissan fell 150,000 units short of projected sales in 1987 and is in danger of not making its share of Japan's 2.3 million export quota for the year ending in eight weeks. "They may make it if they rent enough dock space and barges," said one competitor.

At the same time, Nissan has only carryover products for 1988 and is just beginning to address structural problems masked for years by the easy-sales ways of Japanese car export restraints.

But Nissan U.S.A.'s efforts to reach Ha-

No slowdown in shipments of Japanese cars to the United States despite sales difficulties for some makes

Japanese to import full quota

Incentives expected as stocks pile up

By Jesse Snyder
and Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTERS

LOS ANGELES — Fighting to retain their shares of Japan's 2.3 million car exports to the United States, auto importers say they will take delivery of their entire 1987-88 allocation of passenger cars by the March 31 deadline — regardless of sales.

Analysts say the resulting heavy inventories will prompt sales incentives for many Japanese importers for much of this year.

Some, like Nissan Motor Corp. in U.S.A., are having trouble finding port storage facilities. Dealer and in-port inventories are swollen above normal for Nissan, Mitsubishi Motor Sales, Subaru of America, American Isuzu, Chevrolet (supplied by Isuzu and Suzuki) and Chrysler (Mitsubishi).

Political concerns are overriding ordinary prudent business practices as companies scramble to import 2.3 million Japanese-built cars between April 1, 1987, and March 31, 1988. Importers fear that not accepting their full share of the total would invite Japan's Ministry of International Trade and Industry to reduce their allocation for the year beginning April 1, company executives say privately.

Smith, Caplinger spell out 2 views on dealer relations

SAN FRANCISCO — Speakers at the opening session of the 71st annual National Automobile Dealers Association convention called for stronger relationships between dealers and manufacturers. However, they offered different suggestions for achieving improved relations.

General Motors Chairman Roger B. Smith, in remarks prepared to be delivered at NADA's opening session, said he is disturbed to see surveys, including the latest one from NADA, that show dealers believe manufacturers have too much control over them and do not understand and respond to dealer concerns.

"That doesn't sound like the attitude of one party united with another party 'til death do us part,' " Smith said. "In fact, it sounds like someone who ought to see a marriage counselor."

His solution: Each should gain a better understanding of each other's culture.

"We represent two different cultures, two different sets of operating principles," he said. "They should be able to complement each other to strengthen the franchise system. But all too often, they put

TIME: *Pack, Texas Ford retailer, named Quality Dealer of Year*

SAN FRANCISCO — Sam Pack has been named the 1988 Time Magazine Quality Dealer of the Year. He is president and general manager of Lee Jarmon Ford Inc., Carrollton, Texas.

Pack will serve as the 1988 official spokesman for all 67 recipients of the Time Magazine Quality Dealer Award.

He was selected as Dealer of the Year by a panel of judges from the University of Michigan Graduate School of Business Administration. He was among 17 finalists.

The Time Magazine Quality Dealer Award is sponsored by Time in cooperation with the National Automobile Dealers Association. The award honors outstanding new-car dealers in the United States for "exceptional performance in their dealership combined with distinguished community service."

Air bags slated for 5 Chrysler models in May

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

This spring, Chrysler Motors will become the first domestic automaker to provide air bags as standard equipment in its cars.

Beginning in May, driver-side air bags will be installed in five models: Chrysler Fifth Avenue, Dodge Diplomat, Plymouth Gran Fury, Chrysler LeBaron coupe and Dodge Daytona.

Fifth Avenue, Diplomat and Gran Fury — designated as M-bodies — are full-sized, six-passenger, rear-wheel-drive sedans currently built in Kenosha, Wis.

The J-body LeBaron coupe is a five-passenger, front-wheel-drive luxury sport coupe built at Chrysler's St. Louis Assembly Plant No. 1 in Fenton, Mo.

The G-body Daytona, a four-passenger, fwd sport coupe, is also made at the Missouri facility.

Introduction of air bags on the M-body implies that the large cars will continue to be built in 1989

Chrysler Corp. Chairman Lee Iacocca said last Thursday that M-body production would end in September unless demand for the cars justified a brief extension. He said

Big 3 chop output 12% for 1st half

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

In a push to cut inventories and reduce the need for incentives, domestic automakers have slashed production plans for the first six months of 1988 by 12 percent.

According to the automakers' schedules, 3,510,846 cars will be built in the first and second quarters, off 12.42 percent from the 4,008,748 in last year's first half, with the bulk of the loss coming from General Motors.

GM will cut its car output by about 20 percent. Ford Motor Co.'s first-half production is slated to drop about 7 percent, and Chrysler Motors will end up almost 11 percent below the first half of 1987.

Updated first-quarter auto output — revised for the third time at GM and Chrysler — is scheduled at 1,703,909 cars, down 18.02 percent from last year's 2,078,359.

Second-quarter production is projected at 1,806,937 cars, down 6.40 percent from last year's 1,930,389, according to manufacturer's production schedules.

Tom O'Grady, analyst at Integrated Automotive Resources, said he believes the second-quarter car forecast is one of the more realistic projections issued by manufacturers in several quarters.

Keeping inventory levels down is the key, O'Grady said. That means automakers can reduce the high cost of incentives needed to spur buying in an overcrowded market.

Joseph Philippi, analyst at Shearson Lehman Brothers, said that the second-quarter forecast is more in line with current sales.

Philippi said that despite new incentive programs, automakers are trying to move away from incentives by cutting production and temporarily closing plants.

In each of the last two years, domestic makers had an inventory of nearly 1.7 million cars in August, requiring expensive incentive programs to clear the decks for the new model year. This year, Philippi said, makers hope to go into August with smaller inventories.

GM expects to build 831,347 cars during the second quarter, 13.93 percent fewer than the year-ago quarter's 965,890. The second-quarter plan is 330,000 fewer units than GM built in the second quarter of 1986.

Ford Motor Co. plans to assemble about 474,000 cars in the April-June span, 3.03 percent below the 488,803 built last year.

Chrysler Motors projects second-quarter output of 286,000 cars, down slightly (0.66 percent) from the 287,903 built during the same period last year.

Honda of America Manufacturing Inc. is the only automaker planning substantial production increases in both quarters. Honda plans to build 95,740 units during the second quarter, 14.49 percent more than last year's 83,623.

Nissan Motor Manufacturing Co. U.S.A. estimated second-quarter production at 32,890, 1.11 percent short of last year.

AUTOMOTIVE NEWS STAFF REPORTER

KANSAS CITY, Kan. — Two former General Motors supervisors are suing the automaker for $23 million, claiming they were forced to resign when they refused to ignore faulty brakes on cars built at the Fairfax, Kan., assembly plant.

The plant, which has since been closed and replaced by a new facility, had built Chevrolet Caprice, Buick LeSabre and Pontiac Parisienne.

GM Chairman Roger B. Smith, who visited the new Fairfax plant last Thursday, refused to comment on the details of the suit, saying it would be settled in court.

"But let me say this," Smith said. "We don't believe any cars were shipped with faulty brakes. One of the reasons I feel very confident in saying that is that, had that been the case, they would have shown up in the field as having brake problems, and we'd need to fix them.

"From everything we've been able to determine, and searching our files on the cars in the field produced by the plant, it does not indicate any cars came out of here with faulty brakes," Smith said.

Nevertheless, Fred White Jr. of Olathe, Kan., and Benjamin L. Staponski Jr. of Greenwood, Kan., claim that in May and June of 1986, they separately noticed serious brake defects on an unspecified number of cars, which caused fluid to leak out of the brake systems. It was further discovered by production management that brake-testing equipment failed to detect the problems, the suit says.

In both cases, management was notified but nothing was done, even though the Motor Vehicle Safety Specifications and GM specifications prohibit any brake fluid leakage. If there is any leakage, the car is supposed to be written up for repairs, the suit says.

Despite repeated repair write-ups for brake-fluid leaks, the plant's management refused to solve the problem, the suit alleges. The men were ordered not to discuss the problem with anyone outside the plant or with hourly employees, "as it would cause a plant shutdown and a recall," the suit says.

Eventually, GM brake experts were brought in from Detroit. One engineer said similar brake problems had been discovered at other GM plants building the same models, the court documents say.

The brake experts laid out a procedure for inspectors to visually check for brake-fluid leaks. However, the manpower was not provided to allow the procedure to be followed, the suit claims.

The suit further claims that when White and Staponski were able to force Fairfax production management to provide the inspectors, the "heavy repair (department) was saturated with brake repairs for visible brake leaks."

The suit says the two men turned over to production management more than 100 bolts, 40 brake hoses and 80 washers that were "exhibiting obvious stress, some even cracking." Shortly after, the men were told that the definition of a brake leak was being changed, so that cars could be shipped to the public despite leaks, the suit says.

However, the men refused to deviate from motor vehicle standards and GM specifications without written verification. At that point, they claim, they were verbally harassed and threatened with the loss of their jobs if they continued to write up brake leaks.

Ultimately, both men were told in May 1987 that because of their activities, they would not be given jobs at the new assembly plant in Fairfax, Kan. Both men said they reluctantly agreed to buyouts.

Since they left GM in May 1987, the men said they have searched for jobs but believe they are being blackballed by GM. They claim GM is giving them bad references, despite favorable evaluations throughout their GM careers.

White is 40 and had been with GM for 11 years. Staponski is 39 and had been with GM for 21 years.

"Both Ben and I were loyal to GM," said White. "Both our fathers were supervisors at GM. We always assumed that GM would take care of problems if we did our jobs."

White said, "They preached every day on both shifts about quality. We were told to preach quality to the hourly workers. And then, we were told to tell them that they check the brakes by how wet their finger was."

JOB CUTS: *VW sales slide means reduction in U.S. white-collar workforce*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Volkswagen of America will make "moderate" cuts in its salaried workforce during the next 11 months as the company adjusts to sales declines for its Audi and Volkswagen lines.

The company would not reveal the size of the reductions. But they will come in addition to layoffs stemming from this summer's closing of VWoA's Westmoreland, Pa., assembly plant.

That shutdown will eliminate about 400 white-collar positions at the plant and about 300 in Michigan, a spokesman said. At the beginning of the year, the company employed about 3,100 salaried workers in the United States.

Positions will be eliminated through a combination of layoffs, attrition and early retirements, the spokesman said. It's expected that about 60 percent will come from layoffs.

The Volkswagen United States regional office in Valley Forge, Pa., will be closed as part of the streamlining process. The company also expects to close a second regional office.

"We will be making adjustments to reflect the condition that we are in and what we expect it to be in the future," the spokesman said. "Over the course of the year, there will be a series of consolidations."

Sales of the company's VW-badged vehicles fell nearly 12 percent in 1987, to 191,705 units. On the Audi side, sales have plunged from a record 74,061 in 1985 to 41,322 last year. The decline has continued during the last six months, when Audis have been selling at an annual rate of 26,000 units.

The spokesman said the changes won't weaken any of the company's contacts with dealers.

Yugo acts to correct mistakes, move ahead

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Yugo America is undertaking "an important mid-course correction."

It is confronted with slumping monthly sales and a need to re-group before new models are introduced, said William Prior, president. The changes are to define the image of the subcompact and to reinforce the dealer network.

The first action was the recent announcement of an expanded four-year/40,000-mile warranty as well as free maintenance for one year. Other programs going into effect include:

- A new advertising campaign that will play down price and concentrate more on the features of the car.
- A series of customer satisfaction programs to be grouped under the title of SECURE — an acronym for Servicing Customers Responsibly. Those actions include a customer aid program, a mechanics' recognition program and port inspection services.
- Changes in dealer operating standards.
- More formal training programs.
- Establishment of a national fleet program.

Various indicators during the past year prompted those actions, Prior said. While monthly sales have been slipping since September, he said that was not his primary concern. Dealers were saying that the company was not as responsive as it could be, he said.

The Yugo image has not changed. The car's image is based on price, not features, although value will be given greater emphasis in a new advertising program. Yugo executives spent several months last year analyzing every element of the business, including dealer development, advertising, marketing and service. Prior called it "soul-searching."

Yugo-mania swept the country two years ago with a simple concept — basic transportation at a low ($3,990) price tag. Despite criticism from various quarters, including the enthusiast press, Yugo America sold 35,959 cars the first year and 48,812 last year.

Both figures were below projections, but the monthly sales reports showed increases — until September of last year, when sales began slipping.

The company has expanded rapidly during its short existence. The dealer network has grown from 86 in August 1985 to 324 today. To service the larger dealer network, the company divided the country into four regions and hired sales and service managers to staff those regions.

At the same time, Prior became increasingly involved in the expanding activities of the parent company, Global Motors, of which he is also president, and its drive to find and import other vehicles from various parts of the world. The largest of those projects is the Malaysian-built Proton Saga.

Yugo appeared to be rolling along nicely during that period of increased activity. But as Prior told Automotive News, the company was "falsely saying this was going OK."

Several signs indicated that there might be problems in the future if there were no corrections.

Last year was a time of "benign press" — without the criticism that the product received in 1986, Prior said. Yet Yugo was doing nothing to improve its image. The paradox, he said, was that Yugo made 225 product improvements during that period.

Prior added, "Even as we were improving the car, the image of the car wasn't getting any bet-

Honda model rated highest in repair cost

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Honda Civic CRX was the most costly to repair of 31 small cars included in low-speed crash tests conducted by the Insurance Institute for Highway Safety. A Ford Escort EXP had the lowest damage estimate of the models tested.

The test results, released last week, ranked small two-door models according to the cost of repairs needed after each car was crashed into fixed barriers at 5 mph.

Each of the four tests — front-into-barrier, rear-into-barrier, front-into-angle-barrier and rear-into-pole — was followed by damage appraisals. The four appraisals were then added together so the total cost of the damage could be used to rank the vehicles.

The insurance institute calculated that the repair cost for a Honda Civic CRX was $3,140, after damage estimates from all four tests were totaled. That was the highest total damage of all cars in the test. The CRX, however, did score lower than some other models in the front-end tests.

A spokesperson for American Honda Motor Co. said, "We don't believe the tests are realistic. Giving equal weight to the pole test greatly magnifies the significance of an accident that will happen only very rarely."

The Civic CRX scored the highest damage estimate of all models tested in the rear-into-pole test, sustaining $1,366 in damage. It also had the highest repair cost following the rear-end-into-barrier test: $922.

At the other end of the scale, the Ford Escort EXP sustained only $382 worth of damage from all four tests, making it the least costly vehicle to repair in this test.

The Ford Escort Pony was the second least costly vehicle to repair, with $407 in total damage.

The import with the lowest damage estimate was the Chevrolet Spectrum, at $412, which was the third-lowest repair bill.

The most-expensive-to-repair domestic vehicle was the Pontiac Fiero. According to the insurance institute, the four crash tests caused $1,935 in damage.

Vehicles that had total damage estimates higher than the Fiero's were the Honda Civic, $1,960; Volkswagen Jetta, $1,966; Pontiac LeMans, $2,121; Yugo GV, $2,756; and Honda Civic CRX.

Commenting on the test results, Institute President Brian O'Neill said, "Damage like this is unnecessary. The bumpers on any car ought to prevent all damage in impacts as slow as 5 mph.

"All the cars tested this year could have, and should have, been designed to perform as well as the best," he said.

O'Neill said the tests were conducted in part because "automakers don't disclose how their cars perform in low-speed impacts, so it is hard for consumers to try to avoid the cost and aggravation that can result from fender-benders by choosing cars that won't crumple up in 5-mph impacts."

WHAT SMALL-CAR CRASH REPAIRS COST

Chrysler's profits decline; sales rise

By Edward Lapham and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

NEW YORK — Chrysler Corp. last week reported 1987 net earnings of $1.29 billion, or $5.90 per share, on sales of $26.63 billion. That compares with net earnings of $1.39 billion, or $6.25 per share, on sales of $22.98 billion in 1986.

Chairman Lee Iacocca said the company has had a "number of discussions, even a number of offers" from worldwide suppliers for all or parts of its Acustar parts-making subsidiary. He said suitors have been interested in buying Acustar's "plums" such as its transmission maker, New Process Gear.

The 1986 financial results included a one-time net profit of $131.9 million from the sale of Chrysler's interest in Peugeot.

Chrysler's 1987 figures include those of American Motors, which it acquired last year, commencing with the Aug. 5 acquisition date. The 1986 corporate results were restated due to a change in required financial reporting standards.

In the fourth quarter, Chrysler said it posted net earnings of $350.2 million, or $1.57 per share, on sales of $7.75 billion compared with net income of $324.2 million, or $1.48 per share, on sales of $6.05 billion in the same period of 1986.

The company disclosed that its board had adopted a Share Purchase Rights Plan designed to thwart hostile takeover attempts.

"We believe Chrysler is an unlikely candidate for a hostile takeover," the company said. "But in today's volatile market, you have to plan for the unlikely as well as the likely."

The board declared a dividend of one Preferred Share Purchase Right on each share of the company's 220 million outstanding shares. The distribution will be made Feb. 22.

Essentially, the rights become effective in different situations involving takeover attempts. Each right allows the purchase at that time of one one-hundredth of a share of Junior Participating Non-Cumulative Preferred Stock at $120.

The plan, a fairly common corporate takeover defense strategy, is designed to make any hostile takeover attempt too expensive to pursue, thereby forcing a would-be raider to negotiate with Chrysler's board and protecting the equity investment of shareholders, according to Holly Leese, Chrysler staff counsel.

Chrysler's year-end financial statement showed the impact of its 1987 acquisition of AMC and Electrospace Systems Inc. Chrysler's current ratio, that is the ratio of current assets to current liabilities, slipped below break-even at Dec. 31, 1987, when the ratio was 0.93-to-1, compared with a current ratio of 1.05-to-1 12 months earlier.

Chrysler's debt-to-equity ratio also reflected the assumption of long-term AMC debt and other long-term commitments that increased leverage.

The year-end debt-to-equity ratio was 2.07-to-1 compared with 1.73-to-1 the previous year.

However, Chrysler did acquire a $480 million net operating loss and $40 million in tax credit carryforwards that can be used in varying amounts until the year 2001.

Chrysler also reported that year-end inventories rose to $2.55 billion from $1.70 billion 12 months earlier.

Iacocca told the press conference that Chrysler took a "huge bite" when it bought AMC, acquiring $1.4 billion in fixed costs it is now trying to eliminate without raising prices.

"If we increased our prices in line with what General Motors did, we could have increased our revenues and finished the year even better than we did — at least financially," Iacocca said. "That's not what we chose to do. We ate some of our profits to increase market share."

Iacocca said delayed launches for the C-body cars and the Eagle Premier were costly, as was the 7/70 powertrain warranty.

Chrysler's Jefferson Avenue Plant in Detroit will open in late 1991 or early 1992 as a new plant, Iacocca said. Chrysler will spend $75 million to transfer the Omni-Horizon tooling from its Kenosha, Wis., plant to Jefferson.

He also said he would like to stop making television commercials for Chrysler next year.

Worldwide factory sales of cars and trucks in 1987, including Jeep/Eagle vehicles sold after Aug. 5, totaled 2,260,290, compared with total 1986 worldwide factory sales of 2,198,415 cars and trucks.

Chrysler Financial Corp. reported record 1987 earnings of $225.8 million, up 22 percent from the previous record of $185.6 million in 1986.

Fourth-quarter net earnings for CFC were $59.8 million, second only to the $66.7 million earned in the fourth quarter of 1986.

FTC hits Calif. move to curb broker ads

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

The Federal Trade Commission has said that the California proposal to prevent auto brokers from advertising vehicles they do not have in stock should not be used as a means of driving those operations out of business (Automotive News, Dec. 7).

"We recognize that controversy exists about the competitive effects of automobile brokerage," said Marcy Tiffany, the FTC's Los Angeles regional director, in a letter to a state Assembly committee considering the rule.

"We take no position on what those effects might be. However, it is our view that restrictions on advertising should not be utilized as an indirect method of eliminating automobile brokers from the market."

The Assembly's Transportation Committee, headed by Democrat Richard Katz, is considering an amendment that would prohibit dealers from advertising a specific vehicle or a class of vehicles unless they are in the dealer's possession or available to the dealer "pursuant to a franchise agreement with the manufacturer or distributor of the vehicles."

Meanwhile, the state's Administrative Law Office is continuing its review of a 1971 law that prohibits dealers or brokers from advertising cars that are not on their premises and a subsequent regulation at odds with the code that allows such advertising if the dealer can contractually obtain advertised vehicles from another dealer.

Big 3 boost exports in 1987, plan further gains this year

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Aided by the falling dollar and a renewed commitment to exporting, the Big 3 automakers made strides in boosting shipments of North American-built products overseas last year.

General Motors increased exports by a third to a total of 51,122, compared with 38,417 in 1986. The company more than doubled its shipments to Europe and the Far East.

Chrysler Motors, meanwhile, exported 33,000 vehicles. About half of them were Chrysler products and the others were Jeeps.

Included in those numbers were the first 3,000 Chrysler-badged units headed for Europe, the focus of the company's export ambitions. It expects that number to jump to 10,000 units in 1988. Chrysler also expects to boost its Jeep shipments well beyond the 9,000 recorded in Europe last year.

Ford Motor Co. doubled its export volume to 22,000 units in 1987. Highlights of its effort included an expansion into Europe and stepped-up shipments to Japan and the Middle East.

While the exports represent a tiny portion of each company's overall business, they have taken on symbolic importance. The automakers view the increase as evidence that U.S. products can compete on a global scale, especially as they make their way into the back yards of the European and Japanese competitors.

The spirit generated by that development was evident at GM's Linden, N.J., assembly plant last week. The company took time out to mark the production of the first Chevrolet Corsica/Beretta models headed for Japan.

"I say beginning right now, let the battle cry ring out," Chairman Roger Smith told workers. "Look out, world: Here comes General Motors."

Smith called the exports a small but significant step in showing that the United States is on equal footing when it comes to building world-class cars. The first shipment will contain 41 Corsicas and Berettas and is part of an initial order of 1,125 cars. Last November, GM announced an agreement to sell Corsica/Beretta and the Pontiac Grand Am at Suzuki dealerships in Japan.

Each Corsica/Beretta will include a note, written in Japanese, that says, "We hope you will share your new GM Chevy experience with your family, friends and neighbors."

Ford also made export news last week as it began selling U.S.-built cars in Switzerland, the second European country on the automaker's list of new export markets.

Last year, Ford began shipping cars to Sweden, where it expects to sell 500 imported cars in 1988. The company anticipates similar volume in Switzerland.

The Taurus wagon and the Bronco II will be marketed through Ford of Switzerland and sold in the country's 70 Ford dealerships. About 200 vehicles have already reached showrooms. The company is also looking at exports to other European countries. Ford has exported North American products to the Netherlands since the 1950s.

Ford's 22,000 export shipments last year included 6,800 to the Middle East and 6,600 to Puerto Rico. In 1988, Ford expects to deliver 30,000 vehicles exported from North America.

The Associated Press contributed to this story.

Vixen gets financing; dealers upbeat about sales

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC, Mich. — Vixen Motor Co. has received the additional working capital necessary to resume production in the spring, but it still needs the backing of its 50 dealers and consumers to become successful.

The Michigan Retirement System and the Detroit Policemen and Firemen's Fund have approved the additional $2.4 million Vixen needed to resume production in March of its motor home, according to Vixen President Allen J. Dryer.

The first gasoline-engine/automatic-transmission pilot model was begun on the company's chassis line the day after new funding was approved. (Automotive News, Jan. 25). Vixen is now using General Motors' 3.8-liter V-6 engine.

Vixen anticipates it will get suppliers to go along with the debt conversion portion of its refinancing package and expects to begin calling employees back to work by the end of this month.

It needs strong dealer support thereafter.

Generally, past and present Vixen dealers contacted by Automotive News still have a fairly optimistic view of the company's potential to succeed despite its past problems.

At S&K Chevrolet, Peoria, Ill., dealership co-owner Tom Smith said he would probably order some of the new models but would like to "get a good look at it and see it's a real product" before doing so.

"We have the (Vixen) franchise, but haven't done a whole lot with it," Smith said. "I think the Vixen is a good line, if they get all the wrinkles out of it and get it right.

"There's a lot of people who would buy it for retirement, and they would want good fuel economy and to be able to park it where code restrictions" prevent larger motor homes from being parked.

With regard to the company's planned price cut — from $49,895 for its discontinued model to $42,645 for its new base model and $46,995 for the new unit, fully equipped with all options — Smith said, "The lower they can keep it (price), the better."

He said his dealership "probably sold seven or eight" Vixens in the past. He said, "It's been a little bit of a headache because of product quality, but I think they are upgrading that just a whole bunch."

Jim Lupient, owner of Lupient Oldsmobile, Minneapolis, gave Vixen a surprising endorsement, in view of the fact that he was contemplating litigation against the company on a matter he declined to discuss.

"We'd still be interested in selling it, if the quality was there," said Lupient, He has two other Vixen franchises — at his Rochester, Minn., and Eau Claire, Wis., dealerships — in addition to the Vixen franchise held by his Minneapolis dealership.

"The concept is really right," he said. "A lot of people don't like to park a Winnebago outside all winter, and these things fit in the garage. They had a little niche to themselves. The concept is good, and the niche is still there. All they have to do is make a quality product."

Lupient did note that Vixen had backed its products, buying back from him some units whose quality wasn't right.

Kempthorn Motors, Canton, Ohio, dropped Vixen. Dealer Richard Kempthorn said he would not pick up the franchise, on principle.

"You don't buy in and bow out and buy back in again," Kempthorn said.

He recited a now-familiar litany of past problems that began when he was unable to convince customers they had to shift the gears of the $30,000-$40,000 manual-transmission motor home. He said the problems escalated as the price of the unit kept climbing.

Initially, Vixen planned to sell its motor home for less than $30,000. Within a year and a half of its debut, the price climbed to just under $50,000, which Kempthorn called a "tough sell" for its diesel engine-manual transmission configuration.

He said, "I wish them the best. It's a tough road after what's happened."

Stan Grueninger, who sold his Grueninger Oldsmobile dealership in Cincinnati last August, was the earliest and strongest Vixen booster and his enthusiasm about the company's potential continues. Grueninger just bought a Vixen "for my own personal use, and I'm enjoying it very much."

"I think they've got the correct chemistry there now, managementwise," he added, crediting Vixen Sales Manager Richard Wills with being "very market-oriented" and a "person of high integrity."

Wholesale shipments rise for month, year

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RV manufacturers wholesaled 25,800 units in November, up 4.03 percent from a year earlier.

Aided largely by strong shipments in the previous three months, the 11-month shipment total of 373,200 was up 5.57 percent from the corresponding 1986 period, according to the Recreation Vehicle Industry Association.

Recent developments in the stock market made consumers more cautious in their spending plans, even though few expect those events to reduce their own income or employment prospects, RVIA reported.

The Index of Consumer sentiment, as measured by the University of Michigan, was down 6 points to 83.1 in the November survey, largely reflecting consumer concerns for the overall economy as opposed to any perceived personal changes.

Consumer intentions to purchase an RV rose slightly over October. Some 10.50 percent of families surveyed in November said "chances are better than even" that they would buy an RV in the next 12 months, RVIA reported. That was up from 9.10 percent in October and more than double the rate reported five years earlier, RVIA said.

Some 20.2 percent of consumers surveyed also said they would consider renting an RV in the next 12 months. That percentage was unchanged from October.

Van conversion wholesale shipments continued to improve in November. Manufacturers shipped 11,900 converted vans to dealers, up 6.25 percent from the year-earlier's 11,200 shipments.

It was the fourth consecutive month of higher conversion shipments, pulling the 11-month total to within 700 units of a year earlier: 169,100 versus 169,800.

In November, shipments of unfinished vans by Detroit manufacturers to converters also increased. General Motors, Ford and Dodge shipped 19,500 van chassis without seats to converters in November, up 8.33 percent from 18,000 in November 1986.

For the 11-month period, Detroit manufacturers shipped 200,500 vans to converters, up 23.16 percent over the 162,800 shipped last year in the same period.

Compact vans accounted for all of November's gain.

In November, Detroit manufacturers shipped 4,600 compact vans without seats to converters, more than double the 1,700 shipped in like 1986. For 11 months of 1987, manufacturers shipped 38,800 compact vans to converters, up 28.48 percent over 30,200 in the 1986 period.

By comparison, Detroit manufacturers shipped 14,900 full-sized vans to converters in November, 8.59 percent fewer than in 1986, and 161,700 for the 11-month period, up 29.95 percent from 132,600 a year earlier.

Sales booming for van converters

Major players report strong upturn; Ford supply strained

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Major van converters, such as Starcraft, Glaval, Kentron, Aviator and Sherrod, are seeing a strong upturn in sales as a result of the pickup in auto showroom traffic, buying by dealers who had earlier deferred purchases and aggressive marketing.

Ford, in fact, has been turning down some converters' requests for additional chassis for the spring.

Because of the strength of its chopped van business, Ford is funneling more Econolines into the high cube/parcel delivery van market and also is continuing chopped van shipments to the RV side of the market.

The fact that commercial van manufacturers like Utilimaster and Supreme are stepping up orders for chopped vans is a further indication of a strengthening market.

Among van converters, Starcraft Corp., Goshen, Ind., wholesaled 696 units in January, its second highest January on record, said Ron Chevalier, vice president — sales and marketing for the automotive division.

Starcraft had been discounting vans at the end of last year to help clear out carryover 1987s, but its January shipments — 12 units shy of the record 708 it delivered in January 1984 — did not include any discounting, Chevalier said.

Starcraft, like other GM van converters, has been helped by GM's $500 consumer rebate on full-sized 1987 and 1988 vans from Jan. 12 to Feb. 29.

Separately, at the National Automobile Dealers Association convention, Starcraft is kicking off its new GM-approved ship-through program on full-sized Chevrolet C/K and GMC Sierra trucks, which it is equipping with caps and special interior and exterior dress-up packages.

Meanwhile, Glaval, Elkhart, Ind., whose Gladiator Division displaced Tray Tech as Chevrolet's No. 1 bailment company in December, had record shipments of nearly 1,200 units in December and again in January, according to William Becker, vice president of sales, marketing and advertising.

That includes combined sales for Gladiator, which converts Chevrolet vans; Universal, which handles Ford; and Auto Form, which converts GMC vans.

Becker attributed the performance to a "combination of a lot of things. We feel good. We're not arrogant, but some of the blood, sweat, tears and planning is paying off."

He added that retail sales of the company's products have been inching up 3 to 4 percent on a weekly basis over the last seven to eight weeks.

Glaval recently leased an extra 8,000 square feet to house its growing sales department as well as marketing, advertising, consumer relations, transportation and administrative services people.

Kentron's U.S. Conversions division, Elkhart, Ind., which converts GM vans, shipped 62 percent more units in the first four months of the 1988 model year than it did a year ago.

That represented a 300-plus unit increase, according to Gary R. Soos, Kentron vice president and general manager.

The company's Premier Editions division, which converts Ford vans, shipped 18 percent more units during the same time frame, equal to a 100-plus unit increase, Soos added.

He said January shipments were also ran substantially ahead of last year's, but he did not have final figures at press time.

Soos attributed most of Kentron's gains to an increased market share rather than to a general improvement in the market.

Aviator's retail registrations have also been picking up, according to Larry LaGuardia, vice president and general manager. They showed a 25 percent increase in December and an 18 percent increase in January.

Aviator, Wakarusa, Ind., uses retail registrations sent by its dealers as soon as they sell a unit to fix the timing for its warranties.

LaGuardia said that the pickup in auto showroom traffic, as exemplified by a record crowd at the recent Detroit Auto Show and the record number of dealerships that participated in it, is a good sign for the market.

Aviator has a number of Detroit dealerships whose traffic is improving.

As a supplement to its van business, the company also branched out into pickup truck conversions which have made a "big difference" in its sales, LaGuardia added.

Aviator was approved for ship-through by GMC for a special pickup truck it is doing with the Winchester gun and ammunition company.

"It has proven extremely successful and has helped move a lot of trucks for GMC. We're also putting together nice, sizable programs" for upcoming promotions by different GMC ad groups such as one in Atlanta and another in Wyoming, LaGuardia said.

Separately, the company recently filled a record 400-unit van order for the Ford Michigan Truck Club and Ford Motor.

The specially designed "Team USA" vans feature a red, white and blue color scheme to coincide with the year of the Olympics and the presidential election.

Jack Sherrod, president of Sherrod Vans, Jacksonville, Fla., is also looking for "great things" in 1988.

The company recently delivered its 10,000th van to Gary Fronrath, president of Fronrath Chevrolet, Fort Lauderdale, Fla. Fronrath also bought the very first Sherrod conversion in 1979.

After ignoring the increasing competition and seeing his sales fall off the past few years, "We finally got our attitude right. We're butting heads with these guys (competitors)," Sherrod said.

Sherrod now introduces new or modified van interiors every six months to stay ahead of smaller companies who copy them.

His company also is spending "four to five times as much time with dealerships than we used to," providing such things as presentations on how to sell customized vans.

Sherrod's goal is to return the company to the 1,800- to 1,900-unit sales level it had in the mid-1980s.

AROUND THE WORLD

Japanese dealers laden with debt; problems may grow

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Approximately 60 percent of Japanese dealerships are carrying enormous accumulated debt burdens. Their financial situation could worsen this year, with all makers focusing attention on the domestic market in lieu of expanded exports.

Analysts forecast a 2-3 percent increase in the Japanese auto market this year, on the heels of 6 percent growth last year. But individual companies are setting sales targets calling for increases of 2 percent to 13.3 percent.

The pressure to meet those targets falls on dealers already bowed down by efforts to raise sales in the fiercely competitive Japanese market.

The dealers are in debt, in part because of large debts incurred during the 1960s, when the Japanese market expanded rapidly in what was described as the "motorization of Japan." Dealers had to borrow at high interest rates to meet the need for expansion.

But heavy debt is also attributed to the ever-constant need to use incentives in one form or another. Analyst Koji Endo of Nomura Securities said, "Dealers have resorted to increasingly deep discounts to meet their quotas and to help makers expand market share."

Since most makers — Toyota excepted — have heavy investments in their dealerships, the final costs eventually fall on the makers themselves. With exports to the United States going flat and the domestic market appearing to show the only promise, companies have little choice but to pay the price in the effort to at least hold on to market share.

The goal for every company this year is to strengthen dealerships. In the recent past, as analysts note, the companies could use excess profits from exports to carry their dealers. With profits declining, that effort is becoming more costly.

Now, Toyota may well be upping the ante for everyone. According to press reports, Toyota is about to pour 300 billion yen ($2.4 billion) either directly or indirectly into its dealership network. Toyota says that is not so and that the report in the Nihon Keizai Shimbum was a case of "misunderstanding."

Toyota does acknowledge a general interest in encouraging its dealers to expand, but puts no figure on its support. However, any move by Toyota increases the pressure on every other maker.

James Abegglen, consultant at Asia Advisory Service Inc., pointed out that with its dominance in the market (43.2 percent share) and vast financial reserves, Toyota can raise the ante at any time in the domestic sweepstakes. It can put a financial squeeze on everyone else, forcing them to match it.

Toyota is in the enviable position of having the most independent, most profitable dealer network — indeed, the only independent, profitable network. Toyota has 76 of the top 100 dealerships in Japan. The Toyota group, including Daihatsu and Hino, contribute another six.

Toyota relies on five distribution channels — Toyota, Toyopet, Corolla, Auto and Vista. The network includes 314 dealership companies, operating a total of 4,200 outlets that are manned by a sales force of 45,000. Of the total, Toyota owns all or part of 27 companies. The rest are independent.

Fewer than 10 percent of Nissan's 250 dealerships (operating 3,000 outlets) are free of big debts, according to analysts' estimates. Nissan owns, or owns a share in, half of them. The profit figures for the dealers of other makers are not a great deal better.

The solid structure of the Toyota sales network is attributed to Shotaro Kamiya, the legendary president of Toyota Motor Sales. He set the independent course for sales policy in the early 1950s when Toyota was established as two separate entities, Toyota Motor Co. and Toyota Motor Sales.

According to Hiromichi Ohsuga, general manager of Toyota's research department, Kamiya insisted from the beginning that the company had to be responsible for stable production and that excess inventory in slack times should not be foisted on the dealers.

Ohsuga said the company does not use incentives to increase sales. But, he said, Toyota does at times have "sales campaigns" or "contests" for salespeople, offering prizes such as vacation trips.

Toyota's current sales goal is to reach 2 million units in the domestic market "as soon as possible." The company sold 1.87 million in 1987. Ohsuga said the dealers are aware of that goal and are also working for it.

Despite Toyota's reticence on the subject of incentives, its competitors, as well as analysts and industry observers, say Toyota is no different than other makers. In other words, money can buy sales.

The most common method used by most dealers, reportedly, is to increase the trade-in allowance. Strictly speaking, this is not a discount, but nevertheless it is an extra expense.

Toyota's apparent goal last year was to attain a market share of 50 percent in honor of the company's 50th anniversary year. Toyota did reach 50 percent for several months and upped its overall share for the year by a few points.

Nissan President Yutaka Kume noted at the time, "I presume they are spending a lot of money to keep that market share ideal."

Nissan, under Kume's leadership, may have taken the first step toward easing the constant pressure that all the makers exert to hold on to market share, according to some analysts. Last year, the profitability of Nissan's hard-pressed dealers started to improve.

When Kume assumed the presidency in 1985, one of his first moves was to visit the dealers, to emphasize his intention to make a strong dealership network his top priority.

Last year, Nissan launched a major effort to reorganize its five channels — Nissan, Motor, Prince, Sunny and Cherry — on a regional basis to eliminate what had been a self-destructive competition between Nissan dealers whose regions overlapped. The company is now working to complete that process.

Masayuki Saito, Nissan director for domestic sales, said the reorganization has already led to greater cooperation among dealers. There have been mergers in some cases between dealers of three or all five channels to set up one showroom. There are now 56 joint stores.

The subject of direct financial assistance to dealers apparently comes under corporate secrets. But Saito said Nissan does offer help. It may be preferable in the United States to drop a dealer, he said, but in Japan, "We take care of dealers, even when their performance is not good and they are suffering losses. We help them."

Nissan's investment in half of its dealer network stems, reportedly, from low growth periods when dealers deeply in debt turned to Nissan for support.

Nissan acknowledges indirect assistance. Saito said the company guarantees bank loans or offers dealers low-interest mortgages on land and housing sold by a construction firm that is a Nissan subsidiary. The company also helps with promotional material, and one department at Nissan headquarters is in charge of helping dealerships computerize their information services.

Of the 25,000 salespeople working in Nissan dealerships, 4,500 — including engineers and mechanics — are on loan temporarily from headquarters.

Having made large increases in its sales force last year, Nissan plans no additions this year. But just about every other maker does.

The number of outlets and the size of the sales force in Japan is directly related to the number of sales. As much as 80 percent of the average dealer's sales costs are listed as labor. Some analysts suggest that perhaps 50 percent of sales can be attributed to the size of the sales force, with the quality of the product accounting for the rest.

Honda needed only 1,000 outlets to sell 738,300 units in the United States last year. It took 2,400 outlets in Japan to sell 546,979 units. This year, in order to raise domestic sales by a projected 13.3 percent, Honda will add another 200 domestic outlets and will increase the sales force by 1,400 to a total of 10,000.

The reason for the labor-intensive sales effort is the tradition of selling cars door-to-door. All makers seem to agree that that the door-to-door method will soon be a thing of the past, but Takashi Matsuda, Honda's director in charge of domestic sales, said, "It is impossible to do business without it."

Matsuda, however, said it is important to try to make the system more efficient so that people are not knocking on doors without reason. He said the process is often costly in terms of time for the sales staff, but he said it is necessary, and it is important for Honda to encourage them to do more.

Matsuda said it is also important for Honda to develop an administrative system to make sure customers are visited regularly.

Honda, like Nissan, is also engaged in a major reorganization of its dealership network. Unlike Nissan, Honda is saddled with hundreds of mom'n'pop shops, originally set up as motorcycle dealerships. Many of them are clustered in the same districts.

Honda has spent the last three years trying to organize on a regional basis and eliminate shops that could not upgrade to meet car dealership standards. The smallest shops were given two years to show they could handle only Honda models and could sell a minimum of five units a month. Two hundred were dropped by the end of 1986 when they could not meet those standards.

Last year, Honda was able to launch its three channels (Clio, Verno and Primo) on a full-scale exclusive basis. The Clio dealers, most of them owned wholly or partly by Honda, handle the Legend exclusively. Verno dealers sell the Integra and Prelude, and Primo dealers handle the Civic. For now, both Clio and Primo handle the Accord.

Besides adding outlets and increasing the sales force this year, Matsuda said Honda will concentrate on after-sale service. "Compared with Toyota," he said, "we are not at an ideal level."

Toyota can count on brand loyalty by more than 65 percent of its customers; some estimates put it at more than 70 percent.

Honda, meanwhile, has a customer loyalty figure in Japan of 40 percent, according to

5 Japanese deals are public; makers own part of 4

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Unlike the United States, public ownership of auto dealerships is a well-established aspect of the automotive scene in Japan. Indeed, Japan's automakers are investors in some of those public dealerships.

The country has five publicly owned dealerships, all listed in the late 1950s or early 1960s as the market was expanding rapidly and dealers urgently needed capital.

Tokyo Nissan was the first, listed in 1957, and four others — Aichi Toyota, Tokyo Toyota, Chuo Subaru and Tokyo Isuzu — followed in the fall of 1961. But since then, there has been little interest in going public.

Aichi Toyota listed operating income for the fiscal year ended last March at 5.4 billion yen ($43.2 million). Operating income for the same period was 857 million yen ($6.9 million) for Tokyo Toyota, 464 million yen ($3.7 million) for Tokyo Isuzu, 321 million yen ($2.6 million) for Chuo Subaru and 295 million yen ($2.4 million) for Toyota Nissan.

But none is the top dealership in Japan. That honor goes to a Toyota outlet, Tokyo Toyopet, which listed on reports for tax purposes an annual income of about 8 billion yen ($64 million).

Some securities houses would like to see it go public, but apparently the company declines to do so. Most dealerships in Japan remain family operations.

Of the public dealerships, Toyota has a 61.9 percent share of Tokyo Toyota. At Aichi Toyota, on the other hand, there is no listing for a Toyota share. At Chuo Subaru, Fuji holds 48.7 percent. Nissan has a 25 percent share in Tokyo Nissan, and Isuzu has a 19.3 percent share in Tokyo Isuzu.

The makers profess no concern or opposition to any dealership going public. That is best expressed by Toyota General Manager Hiromichi Ohsuga, who said the company has no fear of dealerships being listed but sees little benefit either.

The only benefit most makers could suggest was one of image. The conclusion was that there are enough low-interest bank loans to go around in cash-rich Japan these days to satisfy any need.

AROUND THE WORLD

Japan alters door-to-door sales system

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Kiyoshi Abe, 32, has been a Nissan salesman since he was 19. He is considered one of the best at the Nissan Prince dealership in the Kiyosumi district of Tokyo.

The facility has a service area and enough space for a one-car display and a few chairs and tables. It is not intended to attract customers and looks it. Ninety percent of the firm's sales are made door to door.

Abe hits the streets every day, armed with a briefcase packed with brochures. He knocks on 20 doors a day. Even after making a sale, he stops by once a month to see if the customer is satisfied. When it is time for a customer to buy a new car, he may visit every day.

One of his best customers is Toshitake Honda, who manages a neighborhood Buddhist temple. Honda has bought six cars from Abe in 12 years. He bought the last one six months ago. Abe paid a visit in December and stopped by in January to offer New Year's greetings.

Honda said that such a close person-to-person relationship is an important factor in his decision to buy a car. That kind of constant rapport with customers is expected in Japan, at least by older generations. But times are changing rapidly — more rapidly than most dealerships are able to handle.

Masato Suzuki is president of Nissan Autopia Plaza, which manages the Aprite showroom, one of the newer ideas in marketing. Suzuki said a poll taken in 1984 indicated that the attitudes of customers were changing drastically. Far from the passive qualities that might have led some customers to feel they ought to buy when a salesman came calling, the poll indicated the new Japanese customers were becoming far more aggressive.

Suzuki said that in recent years, as many as 90 percent of the buyers have been initiating sales. Nissan decided door-to-door sales would not work any more, Suzuki said, but the problem was what to do next, since land prices made a move to an American-style showroom prohibitively expensive.

There has been no showroom as such in Japan. The average dealer had space to show three models at most. Autorama, the Mazda channel that sells Mazda-made Ford models, was the first to introduce the showroom idea to Japan — five years ago.

Suzuki said Nissan did not imitate Autorama, but was influenced by it. Three years ago, when he was working at Nissan's headquarters, he helped initiate the new dealership concept.

The result was a series of tieups with educational and information networks and with restaurant chains such as McDonald's, Royal Host and Victoria Station.

People came in to browse at a communications center that featured computers and other high-tech equipment, and then presumably stopped to look at the cars on display.

Or they stopped to have a meal and had their car checked at the same time. Suzuki said customers can have any car checked, Nissan or not, at his Aprite shop. The result, as he put it, is good will for Nissan.

The Aprite shop features three restaurants in a complex resembling a shopping center. The idea, apparently, is to attract young customers, who may not be brand-oriented.

Toyota may well be entrenched with its well-established dealership system, fattened on door-to-door sales building high brand loyalty. Other makers can either try to imitate that system, decades too late, or break away with their own adaptations.

Suzuki's Aprite store is in the forefront of a breakaway. The showroom opened last December in the Ogikubo district of Tokyo on 10,000 square feet of land owned by Nissan's aerospace subsidiary.

Dealerships from Nissan's five channels rent space in the showroom. A salesperson from one channel can sell a model from another channel at the customer's request, and the difference is worked out at headquarters. Meanwhile, the salesman gets points for selling within his own company.

In the first month of operation, Suzuki said, the group sold 160 units and attracted 41,000 visitors. That compares, he said, with 70 units a month sold previously by a Nissan dealer in the same area.

The Aprite showroom idea is in part a reaction to the early success of Mazda's Autorama outlets. But it is also a reaction to Nissan's own marketing breakthrough with the Be-1, introduced last year.

The ultimate yuppie car, the Be-1 was a 1950s nostalgia compact car with production limited to 11,000 units.

Simultaneously, Nissan opened Be-1 boutiques to create an entire production sideline. It involved 17 different companies offering Be-1-related products, including beverages, watches, glass frames, audio speakers, sporting goods, stationery and clothing.

It created great snob appeal for many consumers, particularly the young who had not formed an attachment to any brand name.

At the end of November 1987, sales of boutique products were reported at 1.3 billion yen ($10.4 million). The car itself was sold at prices starting at 1.2 million yen ($9,600). Six months later, the asking price of the car on the used-car market was twice that.

The whole concept was a breakthrough in marketing, promotion and showroom techniques.

As Suzuki noted, the Aprite store, connected as it is to restaurants and with the intention of adding a video shop, bookstore and gymnasium, is linked to people's daily lives.

The need to find outlets for the new style showrooms is affecting every maker. Fuji Heavy Industries recently signed an agreement with Jusco, a major supermarket chain in Japan. The first outlet opened in November in Osaka, a market that Fuji says attracts 8,000 visitors daily and 15,000 every Sunday. Fifteen units were sold in the first three days, 32 in the first month.

Fuji President Toshihiro Tajima said the project uncovered new potential customers, notably housewives attracted to the display of minicars (under 550 cc).

Some Fuji dealerships have also made ties with gas stations in rural areas to entice customers.

Fuji set up a promotional display at the end of last year, allowing customers to choose products from American catalogues, mostly hunting and outdoor catalogues, with a sprinkling of household goods from Marshall Field.

Tajima said the project is intended to encourage customers to buy imports and help reverse the trade imbalance.

It is also intended to attract customers, particularly young customers, who regard hunting gear as fashionable. The guns pictured in the catalogues are not available in Japan.

Since sales began in November, Fuji has sold 9 million yen ($72,000) worth of products and 6 million yen worth of catalogues. There is no report yet on any affect on car sales.

But the trend, definitely, is to showrooms that attract customers, as every maker seems to agree. The problem is getting land for such projects, since land prices have ballooned beyond reach.

However, some of the makers themselves are sitting on valuable land assets. The question is whether they are ready to hand them over, or to lease or loan them to dealers in an effort to raise domestic sales.

PROBLEMS

FROM PAGE 208

Matsuda. The aim is to raise that to 60 percent by improving after-sale service.

One of the primary reasons for relying on multiple channels, according to the makers, is that is an administrative device to bolster service capacity so mechanics can specialize in fewer models. For the same reason, fewer models enable door-to-door salesmen to develop greater expertise.

Mazda, like Honda, relies on three channels: Mazda, which sells primarily commercial vehicles; Auto, which handles passenger cars; and Autorama, established five years ago to sell Ford-badged cars made by Mazda.

In order to increase domestic sales this year by a projected 2.8 percent, Mazda plans to increase its sales force by 1,000 and either build or refurbish 280 outlets for a total of 1,900.

Autorama may get a new look. Previously only for Mazda-built Fords, it will now handle imports, in particular the Taurus that will be introduced this year. Mazda planned to sell 500 Taurus cars in 1988, but Michimasa Ohara, director in charge of domestic sales, said the company has already received orders for 490, and the first shipment will be gone by the end of April.

Autorama introduced the American-style showroom to Japan five years ago, setting the standard that others are now following. The trend now is to attract customers to the showroom and reduce the emphasis on door-to-door sales.

Most dealerships now are not big enough to show more than three models at a time. Some show only one. Traditionally, the dealerships have been used for a service area and as a base for salespersons making the neighborhood rounds. Little effort was put into making them attractive.

The pressure to change comes at a time when land prices have skyrocketed and dealerships simultaneously face heavy accumulated debt and the need to increase sales regardless. That is necessary just to stay afloat in what will undoubtedly become an even more fiercely competitive environment this year.

Korean dealers turn to Western showrooms, sales ideas

By Irwin Schrader
SPECIAL CORRESPONDENT

SEOUL, South Korea — Auto manufacturers in South Korea don't just make the product. They also sell it.

Practically all 6,400 car salesmen in the country are employed directly by one of the local automakers: Hyundai Motor, Daewoo Motor or Kia Motors. There are only a handful of independent dealers, and company-set prices prevail.

Car salesmen at the three companies earn a fixed salary. A commission on sales, however, usually makes up the bulk of their pay, according to Hong Tu-Pyo, Hyundai's managing director for domestic sales.

Selling cars in South Korea typically involves a lot of legwork. To get at the prime customers — the white-collar employees — salesmen visit company offices in Seoul and other major cities to distribute business cards and brochures.

However, the past year has seen a proliferation of Western-style showrooms in Seoul — with cars on display, desks and chairs. They are beginning to draw potential customers off the street.

The emergence of bona-fide showrooms, said one auto dealer, stems in part from the internationalization of Korean automakers because of their recent success in exporting. Another possible prod has been the arrival in Korea of foreign automakers and their showrooms.

The local market was opened to larger models (2 liters or more) in mid-1987. Across-the-board access is due this July.

The fundamental reason for the higher sales profile, however, lies in the market's explosive growth. In 1987, Koreans bought 245,416 passenger cars, which was 59 percent more than they bought the previous year and roughly three times the 1982 figure.

A steady rise in family incomes, together with the wider selection of domestic and imported models available, have fueled the boom.

Last year, in particular, saw the re-entry of Kia into passenger-car manufacturing, with its Pride subcompact (sold overseas as the Ford Festiva). Since 1981, the company had been confined to van and truck manufacturing under a government industry plan.

In addition, 1987 was the first full year for sales of Daewoo's LeMans model. According to Daewoo statistics, the Opel-designed car captured more than a third of the local subcompact market in 1987 on sales of 47,441 units.

The more crowded and lucrative market generally has made local manufacturers more attentive to consumers' needs, said Hyundai's Hong. "Before, when customers asked for quick delivery, our salesmen could pick and choose who would get delivery first," he said. "But now, that method of selling can't happen."

Improved financing and after-sales service are evidence of changing attitudes on the part of manufacturers and a more sophisticated clientele. Down payments are a fairly liberal 20-25 percent of the sales price, with Kia allowing as long as 60 months for full payment.

Under government policy, however, bank loans are not available for private car purchases. Neither are trade-ins allowed.

One-year/20,000-kilometer warranties offered by local carmakers are backed by fast-growing service networks, including company-run and designated repair centers. In addition, company mechanics circulate in apartment complexes in Seoul to perform minor repairs. Hyundai also has a fleet of repair trucks on 24-hour call in the Seoul area.

To boost sales and market share, the three automakers are beefing up their sales forces and advertising budgets. Daewoo, for example, plans to have 117 sales office and 2,400 salesmen by the end of 1988. In 1986, it had 72 offices and 1,100 salespersons.

Hyundai this year plans to increase its spending on advertising and sales promotion to an industry-high 13 billion won ($16.35 million). Last year, Hyundai spent 10 billion won ($12.58 million) on those activities out of total domestic sales of 1.28 trillion won ($1.61 billion).

Part of that money, Hong said, will go for outdoor billboards to draw the attention of foreign visitors to the 1988 Olympic Games in Seoul, of which Hyundai is an official sponsor.

To help sales overall, local car manufacturers are petitioning the government to reduce the special excise tax on auto purchases. That levy, plus a variety of other charges, can raise the price of a car 25 percent more. A tax reduction may come this summer.

Also reportedly in the works is a lower tariff on car imports — down from 40 percent to 30 percent. The customs duty, plus a heavy acquisition tax, results in a customer price more than double the value of a car entering the Korean market.

Four foreign automakers have entered the local market, Mercedes-Benz, Volvo, BMW and General Motors. None has invested in distributorships. All have local sales agents who undertake the importing.

"Companies were lining up. We didn't have to go searching for a partner," said Peter Lindback, Volvo's representative in Seoul.

He and the local BMW representative said they each hope to sell 200 units this year. But Lindback said it is much too early to gauge the response of local consumers, as the four companies have begun to sell in earnest only this year.

Important variables, said one foreign-car dealer, include nationalistic sentiment and labor unrest, both much in evidence in South Korea last year.

"Foreign cars are considered conspicuous consumption," he said. "People are sensitive to this and may feel that in a certain climate it's not appropriate to travel around in a foreign car."

Brazilian dealer law a boon and a curb

By Rik Turner
STAFF CORRESPONDENT

SAO PAULO — Brazil could almost be said to have outlawed the competition inherent in the free enterprise system in passing what became known as the Renato Ferrari Law in 1979. The law regulates the relationship between car manufacturers and dealers.

Its nickname derives from the then president of ABRAVE, the Brazilian dealer association, who lobbied hard for the change.

The Ferrari law undoubtedly affords a degree of protection to dealers that is unthinkable to their colleagues in other countries. It stipulates, for example, that dealers can sell cars of only one manufacturer, though they may sell other companies' products, such as trucks or motorcycles.

Each of Brazil's automakers — Volkswagen, General Motors, Ford and Fiat — was obliged by the law to negotiate an agreement with its dealers on major issues such as dealer margins.

Once signed, the terms of the agreement can be altered only by accord between both parties.

That aspect led Luiz Antonio Gregnanin, executive director of the ASSOBRAV VW dealer network — the country's largest — to suggest that the law balanced the forces between the two sides. It established rules for their relationship "where previously the manufacturer had laid down the law in autocratic fashion."

Dealers whose livelihood had been put at risk by the then recent pullout of Chrysler from Brazil made a point of building clauses into the law to impede decisions by automakers to withdraw from the market. Chrysler withdrew in 1978, a year before the law was passed, and VW purchased the assets.

Thus the law imposes hefty indemnity payments to the network proportional to the manufacturer's stay in Brazil — in most cases, over 30 years. Only Fiat has been in Brazil for about a decade.

The Ferrari law has been much discussed during the past 18 months amid suggestions that Autolatina, the VW-Ford marriage, would pull out due to huge losses.

ABRAVE estimates it would cost the two companies $2.2 billion in indemnities if they decide to withdraw from Brazil.

If the law cossets dealers in some ways, it is heavy-handed with them in others.

It limits a dealer to selling autos only in a specific, allotted area. In practice, this means that a buyer from out of town cannot just walk in and pick up a car. A dealer who is discovered making such a sale can be accused of invading another dealer's territory and be dragged before the network's Ethics Commission where, if found guilty, he is subject to a hefty fine.

The law prohibits what it defines as "predatory competition." In other words, a dealer cannot offer discounts unless the network has made a collective decision to do so.

But Joseph O'Neill, a former Ford Brasil president and now a consultant for Chrysler in the country, points out there are ways around the ruling.

"There are no freebies on wheels or radios as in the States, but they can give hidden discounts by overvaluing your old car," he said.

In Brazil's highly inflationary economy — 365 percent last year — dealers seldom have the clout to finance car sales. That is normally done by banks or by the finance companies run by the automakers themselves.

With the emergence of Autolatina, however, that has begun to change. The hard-nosed financial practices of the U.S. parent have prevailed over VW's more paternalistic (and money-losing) approach. That has irked ASSOBRAV so much so that it is seeking a position of greater financial independence from Autolatina, Gregnanin said.

That will include the creation of a separate financial apparatus controlled by the VW dealer network, as well as an entry into other retail markets. Dealers will start to sell TVs, washing machines and even sailboats, the ASSOBRAV director predicted.

Another important aspect of the move to greater autonomy is the creation of what is known in Brazil as a "consorcio," or consortium.

A consortium is a fundamental instrument for selling autos in Brazil, given the high rate of inflation. It is a club, in which a group of buyers pays monthly installments on future vehicles, one of which is awarded each month.

A recipient is chosen each month by lottery, but he or she continues to pay installments until the car has been paid for, the installments actually going to the purchase of other people's vehicles.

ABRAVE estimates that 30-40 percent of all vehicles sold in Brazil are bought by consortia.

Irish dealers buy used cars in Britain

By Aidan O Sullivan
SPECIAL CORRESPONDENT

DUBLIN, Ireland — Auto dealers in Ireland have been flocking to Britain to buy used models for resale in this country.

Now, however, Irish authorities are changing their registration regulations to make sure that the car buyer knows exactly how old the imported model is.

There has been confusion in the registration procedure, and the government said it believes many buyers of used imports did not really know the age of the car they were buying.

Dealers say that one-third of all used cars sold in Ireland are imported from Northern Ireland or Britain, where prices of new vehicles are 40 percent lower due to Ireland's high taxes on cars.

Many of the imported cars have failed Britain's annual roadworthiness test, but Ireland does not have such a test.

The Irish market was opened to used imports only a year ago. Prior to that, cars had to be assembled within the country — the only way to import a used car was to take it apart and have it rebuilt in Ireland.

All imported cars and tractors now will have special registration plates that spell out the car's age and country of origin.

Dealers report that big cars in good condition are in demand. With new-car sales at a 10-year low because of Ireland's severe recession, dealers see the importation of used vehicles as their bread and butter in the shorter term.

4X4 VANS

4-WHEEL DRIVE CONVERSIONS FOR FORD, DODGE, CHEVY, GMC and MINI-VANS

For tough, off-road use and severe weather, nothing beats Pathfinder four-wheel drive vans. Our Ohio plant produces more 4 x 4 conversions than any other. Pathfinder is known for better engineering, quality installations, and longer life. Ship-Thru available for authorized dealers.

VW wears European sales crown for 3rd straight year

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Volkswagen Group was Europe's new-car sales leader in 1987 for the third straight year, while the overall market grew by nearly 700,000 units to establish a record.

The year was marked by slower growth for Japanese manufacturers, whose combined European market share fell in 1987.

According to industry estimates, sales in the 17 Western European markets rose to 12,370,000 in 1987, up 6 percent from 11,673,900 in 1986, the former record.

New-car demand in Europe's five largest national markets hit record levels in 1987. West Germany, which recovered from a first-quarter slump to reach 2.9 million, was once again Europe's sales leader.

The United Kingdom went over 2 million for the first time, France topped 2 million for the first time since 1983; Italy edged close to the 2 million mark; and Spanish sales rose by a third to exceed 900,000. Those five countries accounted for 80 percent of European sales.

Volkswagen Group, which includes VW, Audi and Seat, finished with 15 percent of the market. The West German group's unit volume increased 7.8 percent to 1,849,800, mostly on gains by Audi and Seat.

Fiat Auto, including Alfa Romeo and Lancia, ranked first through most of the year but forfeited sales leadership in the fourth quarter. Its new Tipo subcompact is expected to help it mount an even stronger challenge to VW in 1988.

EUROPEAN CAR SALES

VW-Audi-Seat	1,849,800	15.0	1,716,000	+ 7.8
Fiat Group**	1,758,000	14.2	1,634,400	+ 7.6
PSA***	1,497,800	12.1	1,327,200	+12.9
Ford	1,480,000	12.0	1,366,000	+ 8.3
Japanese (all)	1,393,400	11.3	1,359,900	+ 2.5

Others	336,900	2.7	328,200	+ 2.6
Total	12,370,000	100.0	11,673,900	+ 6.0

* Total does not add up to 100 percent because of rounding
** Includes Alfa Romeo
*** Peugeot, Citroen, Talbot
**** Opel, Vauxhall, Saab, GM-U.S. Canada

All of Europe's Big Six volume manufacturers managed sales gains last year. The three largest prestige-class manufacturers — Daimler-Benz, BMW and Volvo — suffered marginal declines.

Peugeot SA, including Peugeot and Citroen, achieved the largest single gain among European automakers. The French group recorded a 12.9 percent increase to top Ford for third place.

The Japanese had been advancing steadily in recent years, boosting European sales by nearly 20 percent in 1986 alone. But under increasing political pressure here, Japanese makers slowed shipments to Europe and improved volume by only 2.5 percent last year. Market share slipped from 11.6 percent to 11.3 percent in 1987 as the Japanese combined for 1,393,400 sales.

Nissan once again finished ahead of Toyota in Europe. Nissan sales increased 3.4 percent to 361,300, or 2.9 percent of the market, down from 3 percent in 1986. Toyota was up 2.7 percent to 346,200 and a 2.8 percent share. Mazda and Honda lost market share in Europe last year, while Mitsubishi gained.

VW Group was buoyed by Audi and its successful new 80/90 range and by Seat's sales gains in Spain and elsewhere.

Audi sales climbed nearly 28 percent in Europe to 352,800, moving it ahead of BMW as a European marketing unit. Seat improved almost 28 percent to 244,900. The VW brand was up 0.3 percent. VW's best-selling Golf/Jetta accounted for 6.7 percent of European volume with sales of 824,800.

With Alfa Romeo as part of the group since Jan. 1, 1987, Fiat Auto boosted its share of the European market to 14.2 percent. Group sales were 1,758,000, up 7.6 percent. Fiat Auto's share of the Italian market was 59.8 percent.

Peugeot SA was boosted by both its car divisions as it moved into third place with a 12.1 percent share. Group sales rose to 1,497,800, up from 1,327,200 in 1986. Automobiles Peugeot's volume climbed 14.2 percent in Europe to 916,700, while Automobiles Citroen rose 15.7 percent to 578,900.

Peugeot SA improved its share in a French market that increased nearly 10 percent. It also sold almost 150,000 cars in both the United Kingdom and Italy and nearly 125,000 in West Germany. Ford sales rose 8.3 percent to 1,480,000 last year and its market share climbed to 12 percent from 11.7 percent in 1986. It continued to dominate in the United Kingdom, increasing its first-place sales by 12.6 percent and carving out nearly 29 percent of the market.

General Motors' sales edged upward 3.3 percent to 1,328,800, but GM's overall share slipped to 10.7 percent from 11 percent. Renault was up 5.6 percent to 1,311,600 for 10.6 percent of the market.

Mercedes was steady, declining 0.1 percent to 436,700, while BMW was down 1.3 percent to 294,800 and Volvo declined 0.5 percent to 266,600. Rover Group improved 1.4 percent to 415,600.

NEW CAR SALES BY COUNTRY IN EUROPE

France	2,095,200	+ 9.6
United Kingdom	2,013,700	+ 7.0
Italy	1,970,500	+ 7.9
Spain	916,100	+33.3
Netherlands	552,100	− 1.4
Belgium-Luxembourg	459,800	+ 2.2
Sweden	314,000	+16.9
Switzerland	303,800	− 1.0
Austria	242,800	− 7.4
Finland	189,400	+ 5.6
Denmark	122,400	−27.3
Portugal	122,000	+13.6
Norway	112,900	−32.4
Ireland	68,300	− 7.5
Greece	49,000	−24.8
Total	12,370,600	+ 6.0

Note: Figures preliminary

Sales in West Germany rose 2.9 percent to 2,910,800. It was the most cars sold in a year in a national market in Europe, though most observers here expect a slight decline in 1988. France grew 9.6 percent to 2,095,200 new-car sales, and the United Kingdom was up 7 percent to 2,013,700. Italy, at 1,970,500, was up 7.9 percent.

For the second consecutive year, Spain registered the biggest national sales gain. The Spanish market grew 33 percent to 916,100, following a 20 percent improvement in 1986. The largest European market to show a decline was the Netherlands, where new-car sales fell 1.4 percent to 552,100.

Turn your Service Department headaches into profits.

APB's hands-on training/management program for service departments will increase your:

- Net profit
- Customer satisfaction (CSI rating)
- Customers retained after warranty
- Percentage of customer-pay repairs in relationship to warranty repairs
- Flat rate hour sales per R.O.
- Parts sales per R.O.

Many APB service departments show substantial increases in profit from the very first month.

APB is not a one shot program. On an ongoing basis, we monitor, evaluate, and provide consistent, hands-on training for your people in every phase of the service department. To find out how you can benefit from our 20 years of experience serving the industry, call us at **(617) 626-9200.**

Terex, China approve truckmaking plan

By Ying Chenxiao
SPECIAL CORRESPONDENT

BEIJING, China — North Hauler Limited Liability Co. will be China's first joint-venture company manufacturing dump trucks.

The company was formed following an agreement signed in Beijing late last year by China's Second Inner Mongolia Machinery Co., Northwest Engineering Co. of the United States and its subsidiary, Terex Equipment of the United Kingdom.

Terex off-highway dump trucks with load capacities of 30 to 77 tons will be manufactured in Baotou by the Chinese firm and Terex, using Northwest Engineering equipment and technology. Second Inner Mongolia Machinery Co. is part of the giant China North Industries Corp., one of China's largest weapons manufacturers.

Total investment will be 166 million yuan (about $45 million). SIMMACO will provide two-thirds and Terex one-third. SIMMACO will provide the land, fixed assets and working capital, and Terex will supply equipment and technology to produce trucks. The term of the joint venture is 20 years. The company may produce and develop other Terex products such as scrapers, loaders and crawler dozers for earthmoving and mining operations.

North Hauler is to market the trucks, which will be used in China's booming heavy construction and mining industry.

"Most of our products will be put on the domestic market to meet the urgent needs of mining and construction," said Wang Hongjie, director of the project. "Some products will also be sold on the international market through Terex sales channels."

40-ton Terex dump truck assembled by Second Inner Mongolia Machinery Co.

Production of dump trucks is scheduled to begin in late 1989.

SIMMACO was set up in the 1950s as one of 156 major engineering projects in the first five-year plan (1953-1957). For many years, it produced cannons.

In recent years, it has produced civilian products, mainly medium- and heavy-duty precision machinery, hydraulic engineering machinery and vehicles. It has 20,000 employees.

Since 1980, SIMMACO has assembled Terex dump trucks with components imported from Terex, and 44 dump trucks have been given trial runs in some mining sites. In 1986, the central government gave the company permission to expand operations by allowing a joint venture to be set up.

"We are excited about future prospects, and we expect an increasing presence of Terex products in all regions in China," said Randolph Lenz, chairman of Northwest Engineering.

According to a recent survey, China has 5,119 heavy-duty dump trucks in use, 80 percent of which are imported. With demand increasing, the country will need at least 730-830 new dump trucks with a load capacity of 15-50 tons every year in the next 10 years.

There are currently two major heavy-duty dump-truck manufacturers, producing about 300 units a year. The Beijing Heavy-Duty Truck Plant will expand its capacity to 500 dump trucks with a 15- to 27-ton load capability by 1990. The other, Shanghai Heavy-Duty Truck Plant, is aiming for annual production of 220 32-to 45-ton dump trucks.

GM defends power-steering fix

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors' decision to offer a special policy covering $500 million in repairs for power steering systems in 4.5 million front-wheel-drive cars has drawn a harsh response from the Center for Auto Safety. GM, meanwhile, defended its action.

In a strongly worded letter to GM Chairman Roger Smith, the center said the company's special policy covering power steering loss does not go far enough in remedying the problem. The center said that is because owners will not be notified in writing of the policy and because the policy does not cover all GM vehicles that have experienced power steering loss. The center said that GM's 5-year/50,000-mile limitation on the special fix should be expanded.

Clarence Ditlow III, director of the center, complained that GM has indicated the power steering defect was primarily a cold-weather problem. He said the center has received 3,000 complaints of power steering loss in GM cars and that 25 percent of them were from warm-weather states.

Ditlow said NHTSA is currently investigating the steering problem. He said internal GM memos show the company's own engineers called for an expanded special policy that would have covered 1986-87 models in addition to the 1982-85 A-, J- and X-body cars and 1985 C-body cars that GM has agreed to fix.

The center released a copy of a memo dated July 15, 1986, from engineers with GM's current product engineering staff to back that assertion. The memo cited the need for GM's top management to get the company's steering division to move faster in developing a new cast-iron valve body to replace an aluminum cover on the power steering unit. The memo claims that the power steering failure is not a safety problem.

GM responded to the center's letter by saying the steering problem is an annoyance, but not a safety problem, and occurs primarily in colder climates.

"At no time is steering lost, and once the car's engine warms up — usually in one or two minutes — the power assist for the steering is restored. In addition, contrary to a claim by the Center for Auto Safety, the condition does not occur 'suddenly,' while the vehicle is being driven," GM said.

The automaker added that under the special 5-year/50,000-mile policy, GM will reimburse owners who paid to have the condition fixed and will fix free any cars with the condition, within the limits of the policy. "We think that's fair," GM added.

GM addressed the consumer notification issue by saying, "GM publicly announced the special policy through a news release given to major national news outlets."

Nittany auction opens in Pennsylvania

STATE COLLEGE, Pa. — A new auto auction on 18 acres has opened here to serve dealers in the central portion of the state.

The $500,000 Nittany Auto Auction facility includes a 3,000-square-foot auto reconditioning center that opened in late January. About five acres are fenced for storage.

The Tuesday auctions have been averaging registrations of about 100 cars per week from dealers. Sixty percent of the consignments are sold, said California-based consultant Tom Dreibelbis. Nittany owner Robert Stewart hired Dreibelbis, a former auctioneer, to assist in the start-up, marketing and promotion of the auction.

January vehicle sales up 22% over '87 pace

By Philly Murtha and Joseph J. Bohn
AUTOMOTIVE NEWS STAFF REPORTERS

January's car and truck sales roared ahead of last year's sluggish pace that resulted from a late 1986 race to beat changes in the tax law.

Consumers bought 22.41 percent more imported and domestic cars and light-duty trucks in January than they did in the same month a year ago.

Combined vehicle sales rose to 1,101,490 compared with 899,869 in January 1987. Light-truck sales set another record with a 23.36 percent gain, and car sales moved up 22 percent for the month.

Despite rosier numbers, some dealers cautioned that last year's January sales dropped to near nadir levels because of the previous month's inflated sales.

"We expected an increase because last January was terrible. December 1986 was fantastic and we paid for it a year ago," said Larry Koss, general manager for Avon Lincoln-Mercury, Rochester, Mich.

"A return to normal" is how one Ohio dealer described this year's January sales.

Several dealers had mixed reviews about the month's sales but said incentives and working harder helped.

"We're a little slower than December but better than last January," said David Pirtle, general manager, Leachman Buick GMC Truck, Bowling Green, Ky. "We're going to have to go to sales and incentives to get people through the door. We have fresh inventory — Century, LeSabre and Regal are doing well."

A Pennsylvania Toyota dealer observed, "New-car sales were off 15 percent but our grosses were up 50 percent. We think it's because we're selling more select models and we're working a lot harder."

Where the U.S. market was, Jan. 1988

	Total Sales	Pct. of Total
SUBCOMPACT	80,339	7.93
COMPACT	147,973	19.48
INTERMEDIATE	207,941	27.34

IMPORT	229,459	30.16
TOTAL	760,684	100.00

This January, combined sales of imported and U.S.-built cars rose to 760,684 compared with 623,519 laat year.

Manufacturers retailed a record 340,806 light-duty trucks in January, up from the previous January high of 323,091 in 1986 and 276,350 vehicles retailed in the same month a year ago.

Last month's sales of cars made in the United States jumped to 531,225, an increase of 24.24 percent over last January's 427,578.

Six of the seven U.S. automakers managed to top last January's performance and reported gains of 12 to 156 percent for the month.

Import-car sales captured 30.16 percent of the January market and volume grew 17.11 percent to 229,459, up from 195,941, a year ago.

The month turned out better than dealers and manufacturers expected. The Big 3 U.S. companies shared 65.04 percent of total January car sales.

General Motors had 34.66 percent of total car sales in January; Ford Motor Co., 21.04 percent; and Chrysler Motors, 9.34 percent.

Imports took 30.16 percent of January sales. Transplants captured the remaining 4.8 percent of total car sales. Honda's U.S.-built share was 2.94 percent; Nissan had 0.67 percent; Toyota, 0.59 percent; Volkswagen, 0.42 percent; and newcomer Mazda, 0.18 percent.

Car sales climbed 47.81 percent ahead of last January for Ford. Taurus turned out to be the No. 1 seller in January with 29,935 units delivered.

Chrysler reported an increase of 30 percent in combined car and truck sales in January. Accelerated incentives boosted Chrysler's U.S. car sales 27.21 percent

GM sold 13.02 percent more cars in January than it did last year. Pontiac reported its best sales since last September. Grand Am deliveries topped any other January since it was introduced, according to J. Michael Losh, Pontiac general manager.

The industry selling rate in January averaged 30,427 cars per day this year compared with 23,982 a day in January 1987. There were 25 selling days this year and 26 last January.

January started with a 2.43 percent gain during the first 10 days compared to a year ago. Then, sales soared 48.19 percent ahead in the mid-month period and finished with a 20.76 percent upturn for Jan. 21-31.

For the final 10 days of January, only Nissan and Honda sold fewer cars than they did last year. Chrysler and Ford celebrated 31 percent gains; GM delivered about 14 percent more cars; Volkswagen was up about 16 percent; and

*Big 3 totals include their captive imports.
Percent share may contain error of one or two points due to rounding.

Toyota's sales almost tripled. Mazda sold 897 cars from its Flat Rock, Mich., plant.

Light-truck manufacturers kicked off 1988 with a January record and continuing gains in market share for domestic companies.

Domestic manufacturers continued to gain market share at the expense of foreign competitors.

GM, Ford and Chrysler, including Jeep, retailed 282,323 light trucks last month, for an 82.84 percent share of the total market. That was up substantially from their 219,018 retail sales and a 79.25 percent market share in like 1987.

Foreign companies, although they increased their sales volume marginally, lost several percentage points of market share. They retailed 58,483 units, up from 57,332 a year earlier. Their market share fell to 17.16 percent from 20.75 percent a year earlier, continuing a trend that began in the second half of 1987.

All domestic companies had gains for the month; while most importers, with the exception of Isuzu and Mitsubishi, registered declines.

The three largest Japanese competitors, Toyota, Nissan and Mazda, posted declines in the otherwise robust market.

Chevrolet had the largest gain with sales of 91,490 units, up 39.14 percent from the year earlier's 65,754.

Chrysler's sales of 51,550 light trucks were up a sharp 36.29 percent over the 37,825 units sold in like 1987.

And Ford, with 102,6[illegible] retail sales, was up 27.29 percent from 80,620 in 1987.

GMC had a more moderate 9.70 percent increase on sales of 20,105 units. The company retailed 18,328 light trucks in the year-earlier period.

And Jeep, with 16,555 retail deliveries, just barely edged out its 16,491 performance of a year earlier.

While most domestic vehicle lines were up, Ford and GM had their biggest gains in full-sized pickup trucks while Chrysler more than doubled sales of its minivans.

Suzuki, which was the fastest-growing importer just a year ago, continued in the doldrums with 5,292 sales, off from 5,662 in like 1987.

Sales charts compiled by Karen Dellenski

EUROPE

FROM PAGE 2

Germany, the United Kingdom, France, Italy and Spain — all achieved record volume in 1987 and cumulative sales in those nations have increased more than 20 percent since 1984.

"As this period has also been accompanied by efforts to reduce the break-even point across the industry, the potential for financial improvement is obvious," said a report released last week by Nomura Research Institute in Europe.

"What is also clear, however, is that this benefit is distributed unequally: Volume car manufacturers swing on this uptrend, but the specialist makers have not shared in this market boom and additionally face profit pressure from the dollar decline."

"The most vulnerable are those dealing with the U.S.," said Sanjay Dabysing of DRI-Europe in London. "But most of these companies are well covered for 1988 with regard to currency exchange rates, so they are still going to make decent money. We don't forecast a recession for the U.S."

"There is more uncertainty about 1989," added Steven Reitman of Phillips & Drew in London.

Reitman predicted that the average dollar exchange rate for German manufacturers in 1989 will drop about 17 percent from 1988, during which most importers are believed to be hedged at a rate of about 1.80 marks to the dollar.

That compares with a 10 percent decline in 1988 vs. 1987, as manufacturers operate this year with forward currency contracts purchased before the precipitous decline in the dollar in the last four months of 1987.

Here is a rundown of the profit picture for major European carmakers.

BMW

Specific figures for 1987 have not been disclosed, but earnings should be consistent with 1986, when the parent company, without world results consolidated, showed a net profit of 337.5 million marks ($200.8 million).

"We sell more than two-thirds of our cars and motorcycles in countries where the value of the D-mark has remained relatively constant for years," said Finance chief Volker Doppelfeld.

Daimler-Benz

Given the dollar's fall and the uncertainty in financial markets, Daimler said it achieved a "satisfactory result" for 1987. Earnings are thought to be about even with 1986, when Daimler made a net profit of nearly 1.8 billion marks ($1.07 billion). Analysts generally expect a slight downturn in 1988 after the group's flat performance in 1987.

Though its results are not broken out, the passenger-car operation is widely considered to have been the most profitable in the world in recent years, and it sells a smaller proportion of cars in the United States than competitors. Mercedes will invest heavily in new-car programs during the next five years.

Fiat Auto

Pre-tax operating profits for the group in 1987 increased 31 percent to 3.22 trillion lire ($2.61 billion). For Fiat Auto, which included Alfa Romeo, Chairman Vittorio Ghidella has said that 1987 operating profits are estimated at 10 percent of sales, or about $1.75 billion.

Despite a string of healthy profit gains since the early 1980s, Chairman Giovanni Agnelli said recently, "The short- and medium-term group prospects present us with new and more difficult commitments."

Ford

Net profits for Ford's European operations almost doubled from $326 million in 1985 to $559 million in 1986. There is speculation whether 1987 returned to the heady days of $1 billion European profits last seen in the late 1970s, when Ford of Europe kept the worldwide operation afloat. Ford of Germany has helped by pulling out of the red in 1986.

General Motors

GM said it returned to profitability in Europe last year after suffering net losses of $343 million in 1986 and $371 million in 1985. Exceptional items accounted for almost $360 million in 1986, more than the total deficit. Those items included $100 million to cover the cost of shutting down medium- and heavy-truck production at Bedford in the United Kingdom.

Adam Opel in West Germany has returned to profitability and Vauxhall, GM's passenger-car unit in the United Kingdom, is expected to report an operating profit for 1987 following a record net loss of 61.7 million pounds ($109 million) in 1986.

Jaguar

Analysts expect profits of £90-98 million ($159-$173 million) before taxes in 1987, down from £120.8 million ($213.8) in 1986. Higher-than-expected costs of launching the new XJ-6 sedan and the declining dollar are cited for the drop.

Most observers expect a return to 1986 profit levels or better in the current year if there is no major U.S. economic fallout. However, some see another decline in 1989 as the benefits of favorable currency hedging run out.

Peugeot SA

Figures for 1987 will not be released until May, but analysts estimate that Peugeot — which pulled out of the red in 1985 — nearly doubled its consolidated net income last year to around 7 billion francs ($1.24 billion) from 3.6 billion ($638 million) in 1986.

Opinions vary for 1988, with some anticipating a small decline as past tax write-offs built up during red-ink years run out. Both the Automobiles Peugeot and Automobiles Citroen divisions are now well into the black, and PSA Chairman Jacques Calvet has said he wants the company to be Europe's most profitable automaker by the early 1990s.

Porsche

Battered by the weak dollar and reduced sales of its four-cylinder models, net profits fell to 51.9 million marks ($30.9 million) in the fiscal year ended last July 31. That was down from 75.5 million marks ($44.9 million) in 1985-86 and 120 million marks ($71.4 million) the year before.

New Chairman Heinz Branitzki said recently that the company will not slip into the red for the current fiscal year, but he also said that the profit figure will not be "bombastic."

Renault

Renault is expected to report net profits of 3 billion to 4 billion francs ($531 million-$709 million) for 1987 after accumulating losses of 27 billion francs ($4.79 billion) during the previous three years.

The French government is still eager to change the corporate status of Renault from a state agency to that of a state-owned commercial company. The change would be accompanied by a 12 billion franc ($2.13 billion) debt write-off necessary to restructure the group's balance sheet.

However, even after the debt writeoff, Renault would remain saddled with nearly 40 billion francs ($7.09 billion) in debts.

Rover Group

The British government-owned group that includes Austin Rover has said it expects to report an operating profit for 1987, paving the way for the group's eventual privatization. The pre-tax profit would be the group's first since 1983.

Rover, which last year sold part of Leyland Trucks and other units, had an operating loss of £240.7 million ($426 million) in 1986 and had a net deficit of £892 million ($1.58 billion). Half-year results in 1987 showed an operating loss of £7.3 million ($12.9 million), down from £71.1 million ($125.8) for the same period the year before.

Rover is expected to duplicate its operating profit in 1988, but the outlook for net results is uncertain, what with an accumulated deficit of £2.6 billion ($4.6 billion) and a further £800 million ($1.4 billion) owed to banks.

Saab-Scania

Pre-tax profits dropped 10 percent through the first eight months of 1987, but analysts expect that Saab-Scania will report a 1987 profit of about 3.25 billion kronor ($541 million), nearly even with 1986's 3.29 billion ($547 million).

The late-year surge was based on improvement at Scania truck operations. A slight decline to about 3.2 billion kronor ($532 million) is predicted for 1988.

Volkswagen

Pre-tax profits for 1987 should be much the same as the 2.1 billion marks ($1.25 billion) the group earned in 1986. VW experienced financial setbacks in the United States and Latin America last year, but offset that with a first-place 15 percent market share in Western Europe.

VW will introduce the new Passat in 1988, bolstering itself in the mid-range where it has not performed well.

Conditions in the United States and Latin America remain question marks insofar as 1988 results are concerned, but the general expectation is for another flat year.

Audi's new chairman, Ferdinand Piech, recently termed 1987 profits "unsatisfactory," though figures have not been released. Profits dropped 16 percent in 1986 to 102 million marks ($60.7 million).

Volvo

AB Volvo finished 1987 with record pre-tax profits of 9 billion kronor ($1.5 billion), up 20 percent from the year before and an all-time Volvo record. Despite the lower dollar, profits doubled in the fourth quarter. The outcome took analysts by surprise following expectations of unchanged results in 1987.

Much of the strength was provided by the truck and food divisions, which more than compensated for a decline in cars, Volvo said. Earnings for individual divisions have not yet been released.

AIR BAGS

FROM PAGE 1

the company would consider keeping 1,000 workers at Kenosha for an extended production period if the market held up for the cars.

"We don't say the car is dying, but it keeps on taking new life and I guess it's because some people like heavier, formal, V-8 engine cars," Iacocca said.

Also starting in May, Chrysler will install motorized safety belts in its compact Dodge Shadow and Plymouth Sundance models.

Motorized belts currently are used in the Eagle Medallion, imported by Chrysler Motors from Renault, and the Conquest TSi, imported from Mitsubishi Motors Corp.

A number of air-bag component manufacturers in the United States and abroad will supply the Chrysler system. It consists of two crash sensors located on the vehicle's radiator closure panel, an electronic control module (with another crash sensor) in the front interior area of the car and the air-bag module in the steering wheel.

Said a Chrysler source: "By the time the driver air-bag system is offered to our customers (starting this spring), we will have logged in excess of one-million miles with air bags, in order to assure the reliability of the system.

"We think the componentry has matured to the point where it is now ready to be offered in high volume to the buying public."

Chrysler Motors plans to expand the application of driver-side air bags as standard equipment on several other car lines in the 1990 model year.

The company plans to introduce passenger-side air bags — also as standard equipment — in the 1993-94 model year time frame.

General Motors currently offers driver-side air bags as optional equipment in the Oldsmobile Delta 88.

Ford Motor Co. offers them as options on Ford Tempo and Mercury Topaz models and is expected to make driver- and passenger-side air bags standard on the 1989 Lincoln Continental.

OBITUARIES

Bill Luke

PHOENIX, Ariz. — Bill Luke, 79, retired owner of Bill Luke Chrysler-Plymouth here, died Jan. 26. He founded the dealership in 1927, and it is the oldest C-P outlet in Arizona. The store is now owned by his son, Don. Mr. Luke was the brother of World War I flying ace, Frank Luke Jr., for whom Luke Air Force Base in Glendale, Ariz., was named.

C.V. Nalley Jr.

ATLANTA — C.V. Nalley Jr., 72, retired owner of Nalley Chevrolet and Nalley Honda here, died Dec. 18. He sold the dealerships to his son, C.V. "Jim" Nalley III, in 1977. He had also previously owned dealerships in Jasper and Gainesville.

PRODUCTION

Trucks up, cars down in January

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production last month dropped to its lowest level for any January since 1983, while truck output climbed to its highest total for any January since 1979.

Car production hit 477,103 units last month, 1.14 percent below December's 482,622 and 25.36 percent below the year-ago month's 639,223. This was the lowest figure since January 1983 when 452,949 were built.

Last week, automakers targeted 137,195 cars to be built, 7.89 percent more than the prior week's 127,166, but 22.74 percent below the year-ago week's 177,573.

Companies split last week's targeted production as follows: General Motors, 42.53 percent; Ford Motor Co., 29.99 percent; Chrysler Motors, 14.80; Honda of America Manufacturing Inc., 5.55 percent; New United Motor Manufacturing Inc., 2.37 percent; Nissan Motor Manufacturing Co. U.S.A., 2.37 percent; Volkswagen of America, 1.46 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.93.

Truck production for January totaled 331,392, the highest output for that month since January 1979 when 336,734 were built.

Last month's output was 16.09 percent more than December's 285,458, and 6.31 percent more than the year-ago month's 311,736.

Last week's scheduled truck output of 82,559 dipped 5.11 percent from the previous week's 87,004. It was 5.59 percent above the year-ago week's 78,185.

Volkswagen's plant in Westmoreland, Pa., closed this week due to a shortage of parts supplied by its Mexican plant, which was idled by a strike. The plant is slated to reopen Feb. 15.

GM's Van Nuys, Calif., plant resumed output today. The plant had been idle last week for inventory adjustment.

GM's Tarrytown, N.Y., plant resumed output last week after being idle for installation of equipment.

Chrysler's Warren, Mich., truck plant remains idle for inventory adjustment.

January output rises in Canada

Canadian auto production last month totaled 86,420 units, 18.18 percent more than the December output of 73,127, and 15.83 percent more than the year-ago month's 74,603.

Last week's scheduled auto production of 23,155 was 2.55 percent more than the prior week's 22,579, and 15.86 percent more than the year-ago week's 19,985.

So far this year, 110,397 cars have been assembled, 14.93 percent more than the 96,053 built last year at this point.

Truck output during January totaled 73,674 units, 14.13 percent more than December's 64,554, and 18.30 percent more than the year-ago month's 62,277.

Truckmakers targeted 17,665 units to be built last week, 12.30 percent below the previous week's 20,143, but 9.56 percent more than the year-ago week's 16,123.

Japan's top public dealer looks to U.S.

By Richard Feast and Kathleen M. Hamilton
AUTOMOTIVE NEWS STAFF REPORTERS

SAN FRANCISCO — Tokyo Nissan, the largest publicly owned auto dealer group in Japan, wants to compete in the U.S. retail market.

Masaru Izumi, the company's president and also chairman of the Japan Automobile Dealers Association, confirmed the plan at last week's National Automobile Dealers Association convention.

The development parallels the declared aim of Britain's Lex Service, another public company, to expand into the U.S. new-car market.

At the same time, the board of directors of NADA adopted a resolution supporting public ownership of new-car dealerships at its Feb. 6 meeting in San Francisco, and the American International Automobile Dealers Association came out in support of public ownership.

And, last Thursday, Wichita, Kan., dealers Edward and Michael Steven began the public sale of shares in their collection of import franchises. They filed to go public last November.

The moves seem likely to increase pressure on the major U.S. automakers to accept public ownership in their dealer networks.

In private meetings with large, influential dealers and NADA officials in San Francisco, for instance, high-ranking General Motors officials indicated they were reconsidering GM's long-held opposition to public ownership. Those officials told the dealers that they were seeking high-quality dealers — first and foremost — and that it was likely GM would allow public ownership of dealerships on a selective, case-by-case basis.

"There should be more information forthcoming from GM in the next several weeks," according to one source attending a meeting with top GM officials. "But they seem to be developing the right attitude."

Tokyo Nissan President Izumi said, "Competition is very tough in America, but I am confident that we

Makers get the lowdown from dealers

Complaints, little praise at frank NADA sessions

SAN FRANCISCO — Make meetings at this year's National Automobile Dealers Association convention ran the gamut from boom to bust, largely mirroring the fortunes of dealers based on their mix of franchises.

In the testier meetings, General Motors dealers told of struggles and heard about recovery plans; complaining Chrysler Motors dealers were asked to be patient while the Jeep-Eagle merger shakes out; and Nissan, Subaru and American Isuzu dealers learned of plans to help their franchises bounce back.

Among those suffering or bracing for tough times, German high-liners told of expecting more of a shakeout and needing model mixes that will allow them to compete at lower prices, market-numbed Audi dealers heard of new marketing programs to prop up prices and stabilize Audi's slide and Volkswagen dealers were told that company officials were optimistic they could avoid U.S. government tariffs on the Brazil-built Fox.

NADA: *Dealers' mood positive despite many problems*

By Richard Feast
AUTOMOTIVE NEWS STAFF REPORTER

SAN FRANCISCO — Auto dealers face tougher times — and not just because 1988 sales have started with a whimper.

They left the National Automobile Dealers Association annual convention here last week with some lofty issues ringing in their ears.

Talk of excess North American manufacturing capacity, more brands entering the market, pending trade legislation in Congress, international politics and budget deficits may all seem a little remote, but sooner or later they will impact everyone in the business, including the "Ma and Pa" country store.

Captives dumped, McCurry suggests

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — The Chicago Auto Show, always one of the industry's favorite places in which to unveil new products, this year also became a springboard for controversy.

Toyota Motor Sales U.S.A. Senior Vice President Robert McCurry turned the tables on the domestic makers, which have been accusing Japanese companies of dumping vehicles in the United States, and instead accused the domestics of keeping the prices of their captive imports even lower than those distributed by Japanese import companies.

Meanwhile, workers from the former American Motors assembly plant in Kenosha, Wis., traveled to Chicago Friday during the press preview and picketed to protest Chrysler's decision to close the plant.

But there also were important products unveiled at the show, most notably from Ford Motor Co.

Ford Division introduced the Probe, a new sports coupe built by Mazda in Flat Rock, Mich. The car officially goes on sale May 12 as a 1989 model.

Ford also showed off the 1988½ Escort, also due in dealer showrooms on May 12. The car features subtle changes, notably to the grille and backlight.

GM, Chrysler CAFE ratings worsen for 1988 autos

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — General Motors' and Chrysler Motors' estimates for fuel economy of their 1988 cars are up slightly over last year, with GM reporting the larger gain.

Documents filed with the government last week show that GM projects that its domestic passenger car corporate average fuel economy will be 27.3 mpg, up nearly 1 mpg over last year's mid-model-year estimate of 26.4 mpg.

Chrysler remains the domestic car fuel-economy leader with an estimate of 27.8 mpg, up 0.2 mpg from 1987, while Ford is predicting a 0.5-mpg decrease in its domestic-car average for 1988 with a figure of 26.3 mpg, down from 1987's mid-year CAFE figure of 26.8.

Manufacturers must meet a 1988 CAFE of 26.0 mpg for cars and between 20.5 and 21.0 mpg for light trucks.

Total industry fuel economy for 1988 cars and light trucks combined is expected to be 25.9 mpg, down 0.1 mpg from last year. While car fuel economy is up across the board, import-truck fuel economy is down by nearly 1 mpg, contributing to the overall decrease.

GM's expected jump in fuel economy is attributed largely to the introduction of the 2.3-liter fuel-injected Quad 4 engine, which is estimated to deliver 32.3 mpg, according to preliminary data submitted by the company.

However, the unanswered question is whether GM can sell enough Oldsmobile Calais, Buick Somerset and Pontiac Grand Am models with that engine to wipe out CAFE deficits and costly civil penalties pending from the 1985 model year.

While GM recognizes that the Quad 4 will do much to earn three-year carryback credits, company sources believe that it may not totally eliminate GM's liability.

GM is currently petitioning NHTSA for a retroactive rollback of the 1985 fuel-economy standard from 27.5 mpg to 26 mpg.

GM earned $133,905,360 in fuel-economy credits in the 1986 model year when the standard was rolled back to 26 mpg from 27.5 mpg. NHTSA applied those credits to GM's $46,315,695 liability for the 1984 model year and applied the remaining balance of $87,589,665 toward GM's 1985-model-year shortfall. However, GM still faces penalties of $298,208,420, which it hopes to wipe clean with credits generated in the 1987 and 1988 model years, the remaining years of the three-year carryback period.

In his letter outlining fuel-econ-

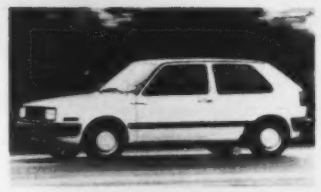
Mexico to supply VWs for U.S.; Ford won't buy plant

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER



Golf: going to Mexico

Jetta: U.S. output ends March 31

Volkswagen of America will transfer production of Golf and GTI models to Mexico after its U.S. assembly plant shuts down this summer.

Separately, Ford Motor Co. announced that it won't buy the VWoA plant, in Westmoreland County, Pa.

Ford had shown mild interest in the facility but last week concluded that it doesn't need any more capacity.

No other company has shown an interest in the plant, a VWoA spokesman said. A group of "low-level" officials from Toyota toured the facility several weeks ago. But the trip was described as a "courtesy" visit that automakers routinely make to each others' plants.

VWoA's production shifts had been expected. The company said when it announced the closing last November that it could eventually export to the United States from Mexico. Later, VW AG Chairman Carl Hahn gave strong hints that the move was likely.

Still, news of the switch has been bitter for the plant's hourly workers. In addition, they were originally told that Golf production would be transferred to West Germany.

"We don't like anyone taking our work from us," said Ron Dinsmore, shop chairman at UAW Local 2055. The local has resigned itself to the transfer, however, and won't fight it, he said.

VWoA plans to end U.S. production of Jetta models March 31. Those cars will then be sourced from Europe. After a five-week shutdown, the Westmoreland plant is scheduled to reopen May 9 and produce 1989 versions of the Golf and GTI through July 14.

That buildup will be expected to meet dealer needs through early 1989, when Mexican-built editions begin making their way into the United States.

The company expects to conclude trial production by the end of the year and begin building Golfs for U.S. export in the first quarter of 1989. A VWoA spokesman cautioned that the schedule could change.

The plant, which is operated by VW de Mexico, currently builds Golfs, Jettas, Beetles and Type 2 vans for the local market and export, the spokesman said. Last year's output was about 60,000 units, well short of the 146,000 capacity.

VW sold about 60,000 Golfs and GTIs in the United States last year. All were built in Westmoreland.

About 160 of the 200 U.S. vendors who currently supply parts for the Golf will continue to do so after production is shifted, the spokesman said.

U.S. dealers have expressed concern about the quality of the Mexican-built cars. James Fuller, VWoA vice president in charge of VW, has said that the transition will be made without impacting the quality or supply. He noted that the company already imports engines and metal stampings from Mexico for U.S.-built models.

In its announcement, Ford said that it has enough capacity to take care of its assembly needs in coming years.

In a letter to Raymond Christman, Pennsylvania's secretary of commerce, Ford wrote: "Within our approved current planning, we have determined that in view of the expected market conditions over the next few years, together with the world's projected overcapacity situation, we will have adequate assembly plants to accommodate our future production requirements."

The letter was written by William E. Scollard, Ford's vice president of manufacturing.

Importers want CAFE cap at 26.0 mpg for 1989, 1990

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Automobile Importers of America has petitioned NHTSA to apply the current corporate average fuel economy standard of 26.0 miles per gallon to the 1989 and 1990 model years.

George C. Nield, president of the group, said circumstances that required lowering the standard to 26.0 mpg for the 1986, 1987 and 1988 model years still exist.

If NHTSA plans to act on the association's petition, the agency would have to propose a new rule and ask for comments before issuing a decision. The Reagan administration has a similar action pending in Congress, but lawmakers have made no effort to make such a change in the 1975 law.

The association's petition was filed on behalf of its members, which include all the import car companies except Volkswagen of America and Mercedes-Benz of North America. However, a lowering of the fuel-economy average would benefit European luxury-car makers and possibly Japanese automakers producing larger models.

Though the CAFE standard was reduced from the congressional goal of 27.5 mpg for the 1986, 1987 and 1988 model years, the association said the national fleet average has risen in the last three years and will exceed 28.0 mpg for the 1988 model year. Requiring the 27.5-mpg level, the association said, will not only increase civil penalties for some automakers but also will "adversely affect the marketplace viability of larger, more sophisticated cars, particularly those of single-line manufacturers."

That not only limits consumer choices, the group said, but also hurts larger, more expensive cars that typically are the first to use costly innovations such as air bags, anti-lock brakes, four-wheel drive and multi-point fuel injection.

The group said that without those larger and more sophisticated cars, consumers may keep their older, less-fuel-efficient cars or buy a van or truck that has only a 21.5 mpg CAFE standard.

In addition, stricter emissions and safety standards, which are pending, may worsen fuel economy, the petition said, and any saving in national fuel consumption is, at best, less than one-tenth of one percent of annual motor-vehicle fuel consumption.

"Raising CAFE will needlessly hurt new car purchasers and create inflationary incentives by encouraging higher new-car prices," the group said.

Audi guarantees resale, offers dealer rebate

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

SAN FRANCISCO — Audi of America is guaranteeing the resale value of all its 1988 models and has launched dealer incentives worth up to $2,000 on its new 80/90-series cars.

In essence, the guaranteed-value plan promises owners that they will be reimbursed if the average resale value of their car falls below that of Audi's chief European competitors. Owners must trade for another Audi between two to four years after purchase to qualify.

Audi had counted on its 80/90 series to perk up sales but they have foundered during their three months on the market.

The announcements capped a hectic introduction to Audi for Richard Mugg, the new Volkswagen of America vice president in charge of the division. In less than two weeks, Mugg was appointed to the job, he visited West Germany and he returned to the United States — program approval in hand — to face anxious dealers at the National Automobile Dealers Association convention.

The programs themselves apparently have appeased dealers. Yet Mugg, like his predecessors in what has become a revolving-door job, acknowledged that rebuilding the franchise will take time. Since Audi became crippled by controversy over unintended acceleration, sales have blown hot and cold with the coming and going of sales incentives.

So the newest round, while welcome, isn't being viewed as a panacea. Neither is the guaranteed value program. But that plan does mark a step in addressing the long-term stability of the nameplate. Mugg said it was an example of the type of approach he will try to take in restoring health to Audi.

But Mugg will also have to balance the long-term strategy with the need for immediate help. He was told by some dealers in San Francisco that they can't stay afloat much longer.

Audi sales have dropped steadily during the last two years and last month fell to 1,439 — an average of about 3.5 per dealer. Compounding the situation for many dealers is the fact that their stores are dualed with Porsche, which is also enduring difficult times.

Along those lines, Mugg faced questions about how the company will manage an orderly reduction of the dealer base.

"They need to systematically have a way to reduce the the number of dealers by 30 percent," said one franchise holder. He contended that company management is responsible — and perhaps legally liable — for its handling of Audi's crisis and the ensuing troubles that dealers have had.

The meeting in San Francisco appears to have mollified other dealers, some of whom were involved in forming an ad hoc committee of Audi activists last month. In a letter sent to the entire Audi dealer body, they warned of the desperate condition of the franchise. The group also solicited a $200 contribution to help their efforts in getting their concerns heard.

In response, top VWoA officials, including

Dealers face wide range of decisions in estate planning

WILMINGTON, Del. — Through careful planning, the successful owner of an automobile dealership can pass on to his or her heirs the rewards of years of labor and creativity.

The dealership owner must first decide if keeping the business in the family is the wisest decision from a financial standpoint, according to Gregory S. Lefever, former senior trust officer of Wilmington Trust Co., Wilmington, Del.

If so, the business owner must formulate a plan that ultimately transfers ownership of the business to younger-generation beneficiaries. Both decisions require careful evaluation of alternative tax consequences.

Often, the owner's family is best served by examining the opportunities for selling the automobile dealership, Lefever said. That is especially true when the proceeds of the sale, if invested more diversely, are likely to generate greater income than the dealership itself.

Second, if the real value of the automobile dealership depends on the present owner's talents, expertise and contacts, replacing him may prove difficult. If no one in the family is found to be acceptable, an outside search may be necessary or someone within the firm will have to be groomed and appropriate compensation provided.

Also to be considered, Lefever said, is the possible negative impact of the owner's death or retirement on the dealership's operations. It might mean, for example, a loss of key customers, increased difficulty in obtaining credit and bank financing and reduced productivity due to the inexperience of successor management.

An example, Lefever discussed the case of the hypothetical John Jones, 55, sole owner of Jones Motors, which he founded 25 years ago. After years of marginal profitability, Jones Motors achieved phenomenal success in the last seven or eight years, with enormous growth in sales, income and profits.

Although most of that success can be attributed to Jones himself, the dealership has benefited from a loyal, hard-working management team.

Jones is married and has three adult children, only one of whom works with him and hopes to succeed him.

Jones has an estate worth $3.8 million, of which $2.7 million is Jones Motors stock. If Jones retires or dies, is he or his estate able to make up from other sources the loss of income to himself and his family?

Lefever said that if Jones dies before his wife, available credits and deductions, including the unlimited marital deduction, enable him to eliminate completely federal estate taxes on his estate.

Not so, however, for his spouse's estate. Her gross estate will be $3.8 million, and her federal tax liability will be $1,483,000. Clearly, the business itself will have to provide much of the cash to satisfy that liability, Lefever said, and that prospect could threaten the continued operation of the business.

Lefever said there is a question of timing: Should a business interest be transferred during one's lifetime or at death and, if the former, by gift or by sale?

In tax planning, each decision has its good and bad points, Lefever said.

Lifetime transfers lessen the owner's control of the assets of the business. If the transfer is by gift, the donor may incur substantial gift tax liability, requiring him to devote separate liquid assets to the tax payment.

Furthermore, for income tax purposes, the gift will carry over to the recipient the donor's predictably low tax basis. On the other hand, if the lifetime transfer is by sale, the owner himself might incur a significant income tax liability on the realized gain.

In contrast, Lefever said, by deferring the transfer until death, the owner retains full control during his lifetime. Tax liability is deferred, and a transfer at death enables the beneficiary to take advantage of a stepped-up-basis, equal to the fair market value at death for income tax purposes.

But a transfer at death also has disadvantages. Retaining the business interest until then tends to increase the taxable estate because all appreciation in value will be included in the meantime.

In contrast, a lifetime gift of the business interest removes from the owner's taxable estate the present value of the gift, any appreciation in value occurring between the date of the gift and the date of death and the amount of any gift taxes paid by the donor, assuming he or she lives three years beyond the date of the gift.

Additionally, retaining the entire business interest through one's lifetime is far more abrupt. Family members, employees, creditors, customers and lending institutions can all become uneasy about the outcome, Lefever said.

He said there is ample evidence that a lifetime pattern of gifts and/or sales assures a gradual and, indeed, smoother transition of ownership from one generation to the next.

According to Lefever, the solution is planning — the business owner should consider the future disposition of his business interest as a part of his present business plan. He said the value of the business interest can best be preserved, if not enhanced, by thoughtful responses to these questions:

- What impact will my death have on my business interest?
- What family members and key employees are available to provide adequate management of my business in my absence?
- How can I insure that my estate as a whole is capable of meeting the cash needs necessary to settle my estate and, afterwards, provide for the needs of my family?
- How can I structure the transfer of my business, whether by sale, gift or otherwise, to achieve the optimum tax results?

100% hike in gas-guzzler tax proposed

WASHINGTON — New York Sens. Daniel Patrick Moynihan, Democrat, and Alfonse D'Amato, Republican, have reintroduced a bill that would double federal taxes on gas-guzzling automobiles.

A similar measure was pushed in 1987 by the New York congressional delegation as a way to raise mass-transit funds. This year, D'Amato and Moynihan hope to attach their proposal to a Technical Corrections Bill of the 1986 Tax Reform Act. That measure will be considered later this year.

Automakers currently subject to the gas-guzzler tax include Aston Martin, BMW, Mercedes-Benz, Ferrari, Jaguar, Porsche, Volvo and Lamborghini.

1988 CARS SUBJECT TO GAS GUZZLER TAX

MAKE	MODEL	MPG	COST	CURRENT TAX
Aston Martin	Saloon, Vantage, Volante	11.0	$110,000	$3,850
Aston Martin	Lagonda	11.0	167,000	3,850
BMW	528	21.7	33,000	500
BMW	535	20.1	39,000	850
BMW	735	19.0	55,000	1,050
BMW	750	16.4	70,000	1,500
Mercedes-Benz	300-TE	21.3	46,980	650
Mercedes-Benz	300-SEL	20.8	52,650	650
Mercedes-Benz	420-SEL	18.9	58,150	1,050
Mercedes-Benz	560-SL	17.6	61,130	1,300
Mercedes-Benz	560-SEL	17.1	68,660	1,500
Mercedes-Benz	560-SEC	17.1	75,850	1,500
Ferrari	328-GTS, GTB	17.3	74,961	1,500
Ferrari	3.2 Mondial, Cabriolet	17.3	79,400	1,500
Ferrari	Testarosa	13.5	121,500	2,700
Jaguar	XJ-S	16.7	44,950	1,500
Jaguar	XJ-SC	16.7	58,865	1,500
Porsche	911 Turbo	21.7	64,000	500
Porsche	928 S4	20.8	65,400	650
Volvo	740	21.2	23,000	650
Volvo	760	21.2	32,000	650
Volvo	780	21.2	38,000	650
Lamborghini	Countach	8.8	138,850	3,850

The existing federal excise tax on a new car purchase is currently based on a sliding scale from $500 for those with an EPA rating of less than 22.5 mpg to $3,850 for an EPA rating of less than 11.5 mpg. Emergency vehicles, trucks, and off-road vehicles are excluded.

LeMANS:

New Pontiac coupe has peppier engine

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC, Mich. — Pontiac has introduced a sporty version of the subcompact LeMans with a larger and peppier engine.

The LeMans GSE coupe is based on a concept car that traveled the auto show circuit a year ago.

The car will be priced between $8,000 and $10,000. A firm price is to be announced during this week's Chicago Auto Show. Other LeMans coupes carry stickers of $6,399 and $7,699. Four-door models are $8,149 and $8,999.

The GSE coupe is equipped with a 2-liter, four-cylinder engine with electronic fuel injection and a standard five-speed manual transmission. A three-speed automatic transmission is optional.

The engine is rated at 95 horsepower at 4,800 rpm. It does 0 to 60 mph in about 9.5 seconds, according to Pontiac. Top speed is 114 mph.

The other LeMans models have a 1.6-liter, 74-hp engine. Performance numbers are 0 to 60 mph in just under 13 seconds with the five-speed manual transmission and about 15 seconds with the automatic transmission, Pontiac said.

GSE aero package features front air dam and rocker panel extensions

The LeMans GSE is available in white, red and silver and features an aero package that consists of an integrated front air dam, rocker panel extensions and rear deck spoiler.

The car is designed to compete against the Ford Escort GT, Volkswagen Golf GT, Dodge Colt DL Turbo, Toyota Corolla FX-16, Chevrolet Spectrum Turbo and Chevrolet Sprint Turbo.

Pontiac expects the LeMans GSE to be favored more by men than by women. The division also predicts that buyers will be more affluent and better educated than buyers of other LeMans models.

However, Pontiac said the LeMans GSE buyer probably cannot afford to purchase a larger, more expensive sports car such as the Toyota MR2, Mazda RX-7, Subaru XT or 16-valve Volkswagen GTI.

The LeMans is based on the Opel Kadett and is built for Pontiac in South Korea by Daewoo Motor Co. Pontiac introduced the LeMans late last spring and has sold about 33,000 cars.

Bad news for GM workers: No profit sharing for 1987

DETROIT — In a letter mailed last week, General Motors broke the bad news its hourly employees had been expecting: They will receive no profit-sharing checks.

Profit sharing, under the GM-UAW contract, was to be calculated on a formula based on pretax earnings from the automaker's U.S. operations in 1987. Though GM said those operations produced "a nominal profit," it was not enough to generate a payout under the profit-sharing formula, employees were told.

The letter to workers discussed GM's efforts to cut costs and its investments in plants to make GM more effective.

"In the current competitive climate," the letter said, "we think jobs are more important than profit sharing. Accordingly, short-term alternatives to boost profits have not been pursued at the expense of GM's long-term success. The goal is to provide both jobs and profit sharing in the future."

The letter told workers that GM's financial performance is expected to improve in the future because of investments and cost-cutting actions taken in the past few years.

"GM is a strong competitor, and we look forward to the day when we again can distribute a healthy profit-sharing payout to each of you," the letter concluded.

In addition, the letter noted, the profit-sharing formula was revised in the contract negotiated between GM and the UAW last fall.

However, Donald Ephlin, UAW vice president who directs the GM department, said the new formula still would not have provided a payout if it had been in effect during 1987. The new formula, which is identical to Ford's formula, became effective at the start of 1988 and is based on the ratio of profits to sales in GM's U.S. operations.

Ephlin said GM's continued low earnings from domestic operations in 1987 are "obviously a source of great concern and a signal to everyone that continued effort is needed to turn things around at GM."

"We believe GM will turn the corner in its vehicle business, hopefully starting this year," Ephlin said. "When that happens, our members at GM will receive their fair share of the profits through the enhanced profit-sharing formula negotiated last year."

CAFE

FROM PAGE 3

omy projections, Sam Leonard, GM's director of emissions, environmental activity staff, said that in addition to the Quad 4 engine, the new GM10 cars will contribute to the 27.3 mpg figure.

He said the new models have a drag coefficient 24 percent less than similar-sized GM cars and that all models will be equipped with fuel-efficient four-speed overdrive automatic or five-speed manual transmissions. He also cited fuel-economy improvements in the company's 3.8-liter V-6 engine.

Donald R. Buist, director of Ford's automotive emissions and fuel economy office, pegged that company's 1988 CAFE at 26.3 mpg — only 0.3 mpg higher than the standard and down 0.5 mpg from last year.

Although Ford's explanation for the decrease in fuel economy is for the most part filed in confidentiality with NHTSA, Buist's letter said the "major factors result from the mid-year introduction of the 1988 Town Car and a reduction in sales of domestic compact vehicles." The Town Car was introduced in early 1987 as a 1988 model and therefore counts against the new estimate.

But Buist went on to say that if certain "opportunities and potential risks" materialize (known to NHTSA but not to the public since they are in a confidential attachment), Ford's domestic CAFE projection may improve to somewhere between 26.4 and 26.6 mpg.

Ford's estimates include an EPA test-procedure adjustment that GM is not eligible to use. GM's request to use the adjustment procedure is in litigation. Ford also receives an exemption for its 5.8-liter engine, a V-8 for emergency and police vehicles.

Buist also told NHTSA it is filing Aston Martin Lagonda's pre-model-year report separately.

Ford said it has not provided loaded-vehicle-weight data because it is not readily available in the company's computer system. In 1982, Ford asked NHTSA to delete loaded-vehicle test-weight information from fuel-economy calculations. Although NHTSA has not yet acted, Ford said its understanding is that NHTSA will eventually delete that reporting requirement.

Captive import fuel-economy averages for 1988 are projected at 38.1 mpg for GM, 36.8 mpg for Ford and 31.0 mpg for Chrysler.

Ford's captive-import estimate is up 13 mpg over 1987 as a result of the addition of the Mexican-built Mercury Tracer and Korean-built Ford Festiva.

The high import average, compared with a drop in domestic-model CAFE, gives credence to recent rumors that Ford is considering moving larger cars, like its Crown Victoria, from the domestic to the import fleet. To do so, it would have to either move production abroad or source enough foreign parts to reclassify the vehicle.

GM projects its two-wheel-drive light-truck gas mileage at 21.2 mpg, which is slightly above the 21.0 mpg NHTSA standard. Its 4wd light-truck fuel economy is estimated at 18.4 mpg, well below the NHTSA standard of 19.5 mpg. Its combined light-truck average fuel economy is projected at 20.2 mpg, just below the alternative combined standard of 20.5 mpg.

GM told NHTSA it expects to offset its shortfall in light-truck fuel economy with CAFE credits earned in earlier years.

Leonard said that GM's new trucks — Chevrolet and GMC 2wd C series and 4wd K series — are more fuel efficient than the vehicles they replaced largely because of a reduction in the aerodynamic drag coefficient.

Buist, in the Ford letter to NHTSA, projected the company's combined domestic light-truck fleet average at 20.3 mpg, somewhat below the required 20.5 mpg.

Ford explained that its domestic combined light fleet projection includes a 0.15-mpg decrease associated with recent sales trends, a 0.05-mpg potential gain with additional tests and a 0.27-mpg increase with other recovery programs. If those occur, Ford said, the shortfall can be offset by using some of the 1986 carryforward credits.

Among imports, Mercedes-Benz projects 1988 fuel economy of 21.3 mpg, significantly below the 26-mpg standard. Mercedes-Benz of North America has a petition pending before NHTSA seeking retroactive relief for both the 1984 and 1985 model years.

Mercedes-Benz in 1984 had a shortfall of $3,115,280, which it wiped out by using credits remaining from the 1981 model year. In 1985, Mercedes faced penalties of $17,989,530 and used credits of $12,480,130 from the 1982 and 1983 model years to reduce the amount to $5,509,400. In 1986, Mercedes-Benz posted a shortfall of $20,214,700.

Mercedes' mid-model-year estimate for 1987 was 22.3 mpg; 1986's final figure was 21.3 mpg.

Mercedes isn't the only European manufacturer with estimates below the 26-mpg standard. Also included are Aston Martin, 10.9 mpg; BMW, 21.8; Ferrari, 16.2; Jaguar, 21.6; and Porsche, 24.8.

The impact of Japanese imports moving to bigger luxury cars is also reflected in the projected 1988 fuel-economy figures. Mazda, which has introduced its 929 luxury model, estimates a 1988 CAFE figure of 27 mpg, down 2 mpg from 1987. Likewise, Mitsubishi, which has added a V-6 engine to its Galant, expects its 1988 average to be 29.8 mpg, down from 31.2.

LIGHT TRUCK CAFE FIGURES

	1987	1988*
Chrysler (domestic)	21.0	21.6
Chrysler (import)	22.2	22.8
Ford (domestic)	20.4	20.3
Ford (import)	26.1	25.4
General Motors (4x2)	20.5	21.1
General Motors (4x4)	18.7	18.4
Isuzu (4x2)	30.5	25.9
Isuzu (4x4)	22.3	20.0
Mazda	26.5	24.8
Mitsubishi (4x2)	26.2	26.7
Mitsubishi (4x4)	22.1	21.7
Nissan	23.4	22.8
Range Rover	16.4	16.7
Subaru	27.6	29.9
Suzuki	33.1	33.1
Toyota (4x2)	27.6	26.1
Toyota (4x4)	23.8	23.0
Volkswagen	18.9	20.5

The corporate average fuel economy standard for both years was 20.5-21 MPG for trucks and 19.5 MPG for 4x4 vehicles.

Domestic inventories hold steady

U.S. stocks remain at 79 days; import-car supply rises to 72

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Domestic-car inventories remained stable in January but showed a dramatic decline compared to Feb. 1, 1987.

The number of domestic cars in stock was 1,676,858 on Feb. 1, the equivalent of a 79-day supply. One month earlier, the stockpile was 1,682,600 units, also a 79-day supply. The year-ago unit count was 1,734,299 cars, or a 105-day supply.

Meanwhile, the unit count of imported cars in inventory fell, but the sales rate fell faster during January, resulting in a higher days-supply figure on Feb. 1 than on Jan. 1.

The import-car supply on Feb. 1 was 661,940 units, or a 72-day supply. On Jan. 1, the count was 677,306, or a 61-day supply. On Feb. 1, 1987, the inventory was 471,547, a 62-day supply.

Inventories of imported light trucks held relatively steady during January. On Feb. 1, there were 184,158 trucks, or a 73-day supply, compared to 185,183, or a 70-day supply, on Jan. 1. Truck inventories a year ago were 677,679, or a 68-day supply.

All inventory numbers include vehicles on dealer lots and in transit in this country; import numbers include port inventories, while domestic inventories include factory supplies. The truck figures include Nissans built in the United States.

Each of the Big 3 domestic automakers trimmed its unit count during January.

The domestic inventory was split this way on Feb. 1: General Motors, 52.86 percent; Ford Motor Co., 26.69 percent; Chrysler Motors, 17.15 percent; Volkswagen, 1.12 percent; Nissan, 0.91 percent; Honda, 0.88 percent; Toyota, 0.23 percent; and Mazda, 0.16 percent.

On Jan. 1, the split was: GM, 54.76 percent; Ford, 24.74 percent; Chrysler, 17.54 percent; Volkswagen, 1.16 percent; Nissan, 0.78 percent; Honda, 0.61 percent; Toyota, 0.29 percent; and Mazda, 0.12 percent.

The domestic inventory split by size class this month was: subcompact, 12.60 percent; compact, 24.02 percent; intermediate, 42.92 percent; standard, 19.16 percent; and specialty, 1.30 percent.

One month ago, it was: subcompact, 11.33 percent; compact, 23.87 percent; intermediate, 44.21 percent; standard, 19.18 percent; and specialty, 1.41 percent.

Stocks of import vehicles — both cars and trucks — were reduced to 846,098 units on Feb. 1 from 862,489 a month earlier. However, because of a slower selling rate, the Feb. 1 inventory translated into a 72-day supply, up from a 63-day supply the previous month.

The import-car inventory by country of origin was split like this on Feb. 1: Japan, 65.94 percent; Germany, 11.86 percent; and other countries, 22.20 percent. A month earlier, it was split: Japan, 65.48 percent; Germany, 14.79 percent; and other countries, 19.73 percent.

Daihatsu reported inventory figures for the first time this month, a 45-day supply.

All figures are based on 25 selling days in January and 26 selling days in December.

Compiled by Ward's

Car output best of year at 134,314

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

United States automakers scheduled their highest weekly production so far this year.

Last week's estimated build of 134,314 cars was 5.46 percent more than the prior week's 127,356 but 23.71 percent below the year-ago week's 176,062.

So far this year, 737,560 units have been assembled, 25.29 percent below the 987,231 built last year at this point.

Last week's targeted auto output was shared as follows: General Motors, 43.85 percent; Ford Motor Co., 29.28 percent; Chrysler Motors, 16.64 percent; Honda of America Manufacturing Inc., 5.86 percent; New United Motor Manufacturing Inc., 2.42 percent; Nissan Motor Manufacturing Co. U.S.A., 1.00 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.95 percent.

Volkswagen of America's plant in Westmoreland, Pa., was idle last week because of a parts shortage. Westmoreland is also down this week for inventory adjustment.

Last week's estimated truck production of 81,994 dipped slightly (0.08 percent) from the previous week's 82,057 but rose 0.55 percent from the year-ago week's 81,544.

Year-to-date, 495,443 units have been built, 7.13 percent more than the 462,463 completed last year at this time.

Chrysler's Newark, Del., plant is idle this week for inventory adjustment. The plant is expected to resume output Feb. 29.

Nissan announced it will scale back production and change the mix at its Smyrna, Tenn., plant, which assembles Sentra and light trucks, beginning next month.

Currently, Nissan is building about 5,600 Sentras per month and approximately 13,000 trucks per month. Next month, that will be changed to about 10,000 Sentras per month and 7,000 light trucks. A spokesman said the change reflects current demand and will be effective through September.

All Ford plants are slated for daily overtime this week except the Edison, N.J., and Wayne, Mich., facilities.

14-month high for Canada cars

Last week's scheduled Canadian auto production of 24,130 was the highest since the week ended Dec. 20, 1986, when 24,896 cars were built.

Estimated car output last week was 5.84 percent more than the previous week's 22,799 and 11.61 percent more than the year-ago week's 21,619.

So far this year, 134,171 cars have been assembled, 15.63 percent more than the 116,039 completed last year at this point.

Truckmakers scheduled 19,241 units to be built last week, 7.30 percent more than the prior week's 17,932 and 14.58 percent more than the year-ago week's 16,792.

Year-to-date, 110,871 trucks have been built, 15.06 percent more than the 96,363 assembled last year at this time.

Korea's Kia adds huge capacity, eyes U.S.

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — Kia Motors Corp. has embarked on a bold $1.6 billion plan to produce 600,000 additional vehicles annually — two-thirds destined for export, many to the United States.

The move could provide an opportunity for Ford Motor Co. — which owns 10 percent of Kia and sources the Festiva from South Korea — to import more vehicles from the country. But a Ford spokesman said Kia's expansion plans are unrelated to its links with Ford.

At the same time, there are reports that the South Korean automaker is considering a plan to take a more direct role in selling its cars in the United States.

Construction begins next month and the facility is expected to enter operation in stages. The plant will be built in Asan, an industrial complex 90 minutes outside Seoul on the country's west coast.

By 1991, when all phases are scheduled to be completed, Kia's total production capacity will be 900,000 units.

Kia will invest about 1.3 trillion won (about $1.6 billion) in this project, its second plant. Kia sources said that 850 billion won, including $184 million in foreign exchange, will be poured into the new plant to reach the first stage of production (300,000 units). An estimated 400 billion won will be invested after 1989 to increase production capacity by an additional 300,000 units.

Kia's Sohari plant on the southern outskirts of Seoul has a capacity of 300,000 units. Pride subcompacts, Concord compacts and Besta vans are built there.

In the United States, Ranjan Pal, an economist specializing in Korea for Wharton Econometric Forecasting Associates, of Bala Cynwyd, Pa., said he was not surprised by the plans. Given the phenomenal rate of growth in the Korean auto industry, 600,000 additional units by 1991 is not out of the question, he said.

He estimated that 75 percent of the exports could be targeted for North America, with the balance going to Europe and Japan.

The export ambitions will be coming at a

Chrysler offers perks on used cars

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

New-car incentives can chill the used-car market, so Chrysler Motors has lighted a fire to boost sales of its second-hand vehicles: loan incentives similar to those on new cars.

The automaker announced a raft of cut-rate loans through Chrysler Credit Corp. for factory-owned used vehicles sold to dealers. Loans are as low as 7.7 percent with terms as long as 60 months.

Used-car sales have gained importance for manufacturers since the advent of buyback programs from daily rental companies.

Under the buyback system, blocks of cars are sold to daily rental agencies then repurchased months later at the sale price less depreciation.

Vehicles then are sold to factory dealers at closed auctions. Chrysler is expected to sell 130,000 executive and programmed vehicles in 1988 at factory-controlled sales.

Ford Motor Co. expects to dispose of 150,000 such vehicles at closed auctions this year, and General Motors' programmed and executive vehicle sales will top 240,000.

"This is not a big program and is confined to dealers within the

TV LEE: *Iacocca wants to bid goodbye to role as television pitchman*

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Lee Iacocca's announcement that his most recent television commercials may be his last as Chrysler Corp.'s chief spokesman could mark the end of an era of automotive advertising.

The man who told American car buyers, "If you can find a better car, buy it!" and put public confidence behind a failing Chrysler in the early 1980s said he wants to retire from his seven-year role as pitchman. The Chrysler chairman said the long hours of filming and his feeling that he has become overexposed are contributing factors.

"I think people are tired of me coming into their living rooms," Iacocca told Automotive News during a rare interview at the National Automobile Dealers Association convention in San Francisco two weeks ago.

Earlier, the auto executive joked with reporters gathered in New York for the company's 1987 earnings results: "I'd like to retire while I'm behind."

Iacocca has appeared in 46 television

Angry UAW girds to fight Chrysler on Acustar sale

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors Chairman Gerald Greenwald will meet with the UAW Tuesday as union locals throughout the company vote on whether to authorize strikes to hamper Chrysler's attempt to sell its Acustar parts-making subsidiary.

While the possible sale of Acustar is not a legally strikeable issue, local unions are allowed to strike on a plant-by-plant basis over health and safety issues. UAW Vice President Marc Stepp warned earlier this month at a union rally that such a tactic might be used to protest the possible Acustar sale.

Such a tactic could affect production throughout the Chrysler manufacturing system within days, union sources said.

Selective strikes could begin in early March if the tactic is implemented, the sources said. However, they said it has not yet been determined if local strikes would be staggered or conducted in unison.

Representatives of all Canadian Auto Workers' locals met Friday to discuss the possible sale. CAW officials were expected to urge the company to keep Acustar within Chrysler.

Chrysler Corp. Chairman Lee Iacocca confirmed Feb. 4 that the company is negotiating to sell all or parts of the $3 billion components subsidiary. Iacocca said at that time an announcement could be made within a month.

The possible sale has angered the UAW at both the international and local level, and workers at several of Chrysler's U.S. plants last week began scheduling strike votes and actually authorizing strikes:

- UAW Local 624, which represents 2,250 workers at Acustar's New Process Gear Division in Syracuse,

GENEVA

New VW Passat, Toyota Carina II, Fiat Tipo to compete for spotlight

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GENEVA — The stepped-up battle between Volkswagen AG and Fiat S.p.A. for top position in the record-blazing European market will be the focus of next week's Geneva auto show.

Volkswagen will present an all-new replacement for the Passat (Quantum), a crucial mid-range entry that will go to the United States early next year.

Fiat offers the first international glimpse of its new Tipo subcompact, which was developed at a cost of $1.6 billion.

Hyundai Canada guilty of predatory pricing

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

Hyundai Auto Canada has been found guilty of selling the Excel, Pony and Stellar models in Canada at as much as 31.8 percent below their prices in Korea.

The antidumping case, which was filed by Ford Motor Co. of Canada and General Motors of Canada, now awaits a determination of injury by the Canadian Import Tribunal. That decision must be made by March 23.

The Canadian Antidumping Tribunal on Friday found Hyundai has been selling the Excel model in

Ford workers in line for $3,700
Ford Motor Co.'s chief financial officer Stanley A. Seneker congratulates line worker Henry Windham after 1987 profit-sharing figures were announced Friday at the Michigan Truck plant, Wayne, Mich. Ford's record $4.6 billion in 1987 earnings will bring profit-sharing checks worth an average of $3,700 to hourly and salaried employees. Last year, workers received about $2,200.

NEW FOR L-M: *Division to get version of '90 Escort replacement*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Lincoln-Mercury will offer a version of the subcompact codenamed CT20 that is scheduled to replace the Ford Escort in 1990.

Sources close to Ford said Mercury's model will take the place of the Tracer. Tracer joined the Mercury lineup last year when the Lynx, a twin of the Escort, was dropped.

Thomas Wagner, who will leave Lincoln-Mercury's top job this month to take over as general manager of Ford Division, confirmed the plans.

He said Ford dealers will get a two-door hatchback while Mercury will carry a four-door sedan. Both divisions will sell station wagons. In addition, there will be a significant variation in sheet metal between the Ford and Mercury cars, Wagner said.

Ford is developing the CT20 with Mazda and will produce the car at its Wayne, Mich., assembly plant. The company has begun work on a new stamping plant next door.

Escort is also built in Edison, N.J. The Tracer sold by U.S. dealers is assembled in Hermosillo, Mexico. Wayne and Edison are among four Ford assembly plants in the United States and Canada not producing on double shifts.

There have been reports that CT20s will be produced in Hermosillo as well as Wayne. Ford has not indicated, however, where the second plant will be. Company officials said recently that production is scheduled to begin in early 1990.

Makers' grades slip

Dealers less satisfied in '87, survey says

AGOURA HILLS, Calif. — Automotive newcomers Hyundai, Daihatsu, Range Rover and Acura top the latest J.D. Power and Associates ranking of auto firms that best satisfied their dealers.

In general, dealers ranked their makers' performances a bit lower than 1986 — probably because dealers' expectations are rising as they acquire more franchises and see how other makers conduct business, said Philip Wade, director of strategic planning for the automotive marketing and consulting firm. More than two-thirds of the dealers surveyed last year held more than one franchise.

New makers generally enjoy a honeymoon with their dealers, so the rosy reports from newcomers Range Rover and Daihatsu — as well as Sterling, which was ranked below the industry average by its dealers — should not be compared with results from other makers, the study said.

Only six of the 28 makes tracked in both 1986 and 1987 improved their dealer satisfaction indices last year.

Asian brands squeaked ahead of European lines, largely because of the Asian makes' high rankings in sales and service support and an improvement in the business terms category, particularly in prompt payment of warranty claims and fairness of sales planning potential, the Power report found. However, dealers gave the Asian makes lower ratings for service representatives' competence, availability and fulfillment of commitments.

Domestic makes' key weakness again last year was in manufacturer service support, with General Motors having the greatest losses.

European makes, too, declined in service support. Dealers gave their makes lower ratings for handling customer complaints, service training and the competence and availability of service representatives.

Although Mitsubishi was not ranked for 1986 because of its low dealer base, it would have been at the top of the heap, with an index of 118. The company hit the 115 mark in 1987.

The precipitous fall in rank by Jaguar was due largely to startup problems with its new model, Wade said. Merkur's index dropped even more than Jaguar's, but its dealers' ratings fell off across the board.

The latest survey was conducted from the last week of August to the first week of October. Results were published in the February issue of The Power Report on Automotive Marketing.

Three officials quit NADA posts; two will take jobs with Toyota

WASHINGTON — Three veteran staff members of the National Automobile Dealers Association resigned last week.

Two are joining the Washington office of Toyota Motor Sales, U.S.A. Robert Wade, NADA's chief counsel and executive director of the legal group, and Earl Quist, director of industry affairs, will assume new government relations posts on Toyota's Washington staff in March. They will report to Doug Smith, Toyota's manager of government and industry relations.

Wade joined NADA in 1980, while Quist has been with the organization 12 years.

As part of a reorganization of Toyota's Washington office, the pair will take over the duties of Robert Daly, Toyota's manager of industry affairs, who has been promoted to national manager of service operations at the company's Torrance, Calif., headquarters.

In another development, Louis V. Priebe, NADA's director of public relations, resigned over policy differences to pursue other professional interests.

Priebe joined NADA in January 1983 after having worked in public relations positions at the American Automobile Association and the Motor Vehicle Manufacturers Association.

Iacocca sees hope of defense work for Kenosha plant

By Geoff Sundstrom and Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTERS

WASHINGTON — Doing what he does better than anyone else, Chrysler Chairman Lee Iacocca came to Washington last week to work a deal between his company and the government.

In roughly two hours, he raised the possibility of briefly extending M-body production at the Kenosha, Wis., plant; forestalled the threat of a lawsuit against Chrysler by the state of Wisconsin; and took a big step toward winning new defense business for two Chrysler subsidiaries.

Iacocca met here Thursday with Rep. Les Aspin, D-Wis., chairman of the House Armed Services Committee, and Wisconsin Gov. Tommy G. Thompson to try to salvage the future of 5,500 workers at Chrysler Motors' Kenosha assembly and stamping plants. Those workers had been told they will lose their jobs at the end of the 1988 model year when Chrysler closes the former American Motors complex.

The Washington meeting, described by both sides as "vocal" and "testy," produced these results:

- Iacocca said he will review extending briefly production of the M-bodied Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury beyond the planned September shutdown. However, he indicated an extension would be unlikely to last beyond the fall.

He said a big factor will be the number of police fleet orders Chrysler receives for the V-8, rear-wheel-drive cars.

The company also said the planned transfer of the Dodge Omni America and Plymouth Horizon America from Kenosha to the Jefferson Avenue assembly plant in Detroit remains scheduled for July.

- Iacocca said Chrysler is attempting to win defense contracts through its Gulfstream Aerospace Corp. and Electrospace Systems Inc. subsidiaries, which may result in defense work for Kenosha.
- Chrysler will try to attract some of its suppliers to Kenosha. Iacocca noted the plant's skilled workforce could be a major lure.
- Thompson announced Wisconsin will hold its lawsuit against Chrysler in abeyance pending the outcome of negotiations with Chrysler.
- Thompson asked UAW Local 72 in Kenosha to "go to the table with Chrysler" to settle the Employee Investment Plan issue and work out a plan for the award of retirement benefits and funds from the union's job bank. The investment plan involves repayment of concessions granted by workers in their 1982 labor agreement with AMC.
- Aspin, whose House committee oversees the Defense Department, said he will look into the possibilities of Chrysler doing defense work in Kenosha. Aspin is better positioned than almost any member of Congress to influence defense contracts.

Aspin said he was willing to explore the possibilities with Chrysler, especially with regard to the stamping and engine plants. Iacocca and Aspin declined to speculate on the kind of defense work Kenosha might qualify for.

Thompson, Iacocca and Aspin said they will look at an "economic development plan for the whole region".

Iacocca said one of the issues of the Thursday meeting was worker pension benefits and health care plans. Iacocca noted that 1,800 employees are eligible for pension benefits and that health care benefits will be extended for several months beyond the plant's closing date. He acknowledged, however, that 3,700 people will remain jobless when the plant closes.

The meeting in Washington followed by two days an announcement by Iacocca that Chrysler will donate all profits from 1988 vehicle sales in Wisconsin to a trust fund for workers left jobless by the Kenosha closing.

The Chrysler-Kenosha Trust, expected to total about $20 million, will be used to pay housing, educational and other expenses for the 5,500 workers potentially displaced.

The program is in addition to Chrysler's contractual obligations such as severance pay and extended benefits.

Iacocca last week said the company was not setting a precedent but was recognizing a "moral obligation" in Kenosha.

Iacocca said Chrysler raised expectations in Kenosha when it decided to build two models in the plant and that the company was "guilty as hell of being cockeyed optimists."

"Blame us for being dumb managers, for spending $200 million to put two old cars in an 86-year-old plant, but please don't call me a liar when I've got to close it sooner than I thought," Iacocca said.

Iacocca described Chrysler as not a "villain" but a "victim" of unfair trade policies.

Iacocca, who described the trust fund as unique, said the $20 million estimate was based on an average $506 net profit on each vehicle sale in 1987. Sales totaled about 40,000 units in Wisconsin last year.

The trust will be administered by a seven-member board to which Chrysler will appoint one member.

Iacocca said Wisconsin dealers are pleased with the program and had sought relief from the company after the closing announcement Jan. 27. Dealers within "a hundred-mile radius of Kenosha were taking a beating," Iacocca said.

The International UAW said it "welcomed" Chrysler's establishment of a trust fund and the company's "accountability" to communities such as Kenosha.

However, Rudy Kuzel, president of UAW Local 72, which represents workers at the plant, termed the program "the mistrust fund" and said the local seeks "jobs, not charity."

"Iacocca breaks a commitment to the state of Wisconsin and the community of Kenosha, throws 5,000 people out of work, causes an estimated $1 billion in damage to the state economy and turns it into a scheme to sell cars," Kuzel said. "He's got to be the greatest car salesman in the world."

Kuzel also criticized Iacocca for blaming the plant closing on foreign competition.

"I'm really bored with this 'slap-a-Jap' campaign Iacocca and the international UAW run every time a plant closes," Kuzel said.

Ford tallies record profits, out-earns GM again

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. finished 1987 with a bang. The automaker posted record profits for the October-December period as well as for the entire year, and in the process out-earned General Motors for the second consecutive year.

Ford's net earnings for 1987 totaled $4.63 billion, an increase of 41 percent over the $3.29 billion it reported for 1986. GM earned $3.55 billion last year and $2.94 billion in 1986.

Earnings per share in 1987, adjusted to reflect the company's 2-for-1 stock split, equaled $9.05 per share compared with $6.16 per share in 1986.

The 41 percent earnings improvement was derived from total 1987 sales that increased just 14 percent, to $71.64 billion from $62.72 billion in 1986.

In the fourth quarter, Ford reported net earnings of $932 million, or $1.87 a share, on sales of $18.76 billion. That compared with 1986 fourth-quarter net earnings of $785 million, or $1.50 a share, on sales of $16.26 billion.

Ford made its money in a very traditional way: on car and truck sales, primarily in the United States, although the company reported improved penetration in most major markets in 1987. Its total worldwide vehicle factory sales reached 6,115,288 last year, 2 percent more than the 5,984,081 reported for 1986.

"The entire Ford team deserves the credit for the company's success," the company said in a statement attributed to Chairman Donald E. Petersen and Vice Chairman Harold A. Poling.

The statement credited "the joint effort by employes, suppliers and dealers" in bringing Ford's products to consumers as "the key to 1987 results."

Some 90 percent of the company's $1 billion earnings improvement came from operations in the United States, where earnings were $3.44 billion in 1987 compared with $2.46 billion in 1986.

Outside the United States, Ford earned $1.18 billion, compared with $825 million in 1986. Ford said higher profits in Europe and Asia-Pacific operations were partially offset by less favorable results in Latin America, where weak economic conditions in Brazil as well as startup costs for the Autolatina joint venture with Volkswagen in Brazil and Argentina hurt profits.

The company said that in the United States, its share of the car market rose to 20.2 percent from 18.2 percent in 1986, while truck-market penetration rose to 29.1 percent from 28.1 percent.

In Canada, Ford said its car-market penetration improved to 18.1 percent from 17.2 percent while its truck market share increased to 30.8 percent from 29.7 percent.

In Europe, Ford said its share of the car market rose to 12.1 percent from 11.8 percent while its truck share increased to 10.7 percent from 9.6 percent.

Although there was no question that Ford's main strength in 1987 was automotive, its non-automotive subsidiaries buoyed earnings, adding net profits of $1.66 per share in 1987 compared with $1.48 per share in 1986.

The company said Ford Credit earned a record $679 million last year, up 11 percent from $611 million in 1986. Elsewhere in the Ford financial services group, there were some difficulties, however.

The company's San Francisco-based thrift institution, First Nationwide, sustained a 38 percent decline in earnings to $63 million from $102 million, which the company attributed to "costs associated with its expansion program and lower net interest margins."

Oddly, the company reported that last year's adoption of FASB (Financial Accounting Standards Board) Standard No. 87, dealing with accounting for pensions, increased net income by $148 million, or 29 cents a share. Most corporations had expected the new standard to hurt their balance sheets.

Last year, Ford reported increased capital spending — $3.61 billion compared with $3.35 billion in 1986.

Ford's year-end balance sheet looked even stronger than it did one year earlier, as the company reduced its debt-to-equity ratio to 1.43 to 1.00 from 1.55 to 1.00 at the end of 1986.

At Dec. 31, 1987, the company had a liquid asset pool that included $10.1 billion in cash and marketable securities. One year earlier, that pool was about $8.6 billion.

During the year, Ford reduced its long-term debt from $2.1 billion to $1.8 billion; reduced capital stock from 536.8 million shares to 507.5 million shares through a buyback campaign; and boosted year-end shareholder equity to $18.49 billion, or $36.44 per share, from $14.86 billion, or $27.68 per share one year earlier.

Profits rise for Big 3; '87 2nd best

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The Big 3 automakers made a killing in 1987.

Together, they reported year-end profits of nearly $9.47 billion on sales of just over $200 billion.

That compares with 1986 profits of $7.62 billion on sales of $188.5 billion.

The record earnings year was 1984 when the Big 4, including an autonomous American Motors, earned $9.82 billion on sales of $160.1 billion.

In other words, the Big 3 in last year's tough domestic market squeezed out nearly $2 billion more in profits than they did the previous year, just missing a new record.

Along the way, they raised their profit margin to 4.73 percent in 1987 from 4.04 percent in 1986.

The improvements were accomplished in a variety of ways. Ford, with 48.86 percent of the profits on just 35.81 percent of dollar sales — mopped up in the primary business of selling cars and trucks.

Ford posted improved penetration in most of its major markets and spiffed its operating efficiencies for its record results.

GM, with 37.51 percent of the profits on 50.88 percent of total Big 3 dollar sales — relied on non-automotive units for earnings punch.

General Motors Acceptance Corp. contributed $1.5 billion in profit while Electronic Data Systems Corp. kicked in another $323 million and GM Hughes Electronics Corp. contributed $670 million. Those non-automotive units provided about $2.49 billion of GM's net earnings of $3.55 billion.

Chrysler, which swallowed AMC last year, was more balanced. Chrysler accounted for 13.63 percent of industry profits and 13.31 percent of total sales.

The company improved its penetration in U.S. and Canadian markets to bolster automotive earnings. Meanwhile, its equity in the earnings of unconsolidated subsidiaries was $348.9 million, or about 27 percent of its total.

NEW AUDIS: *Revamped 5000 due in July; coupe, 20-valve engine on tap*

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Audi of America's updated and renamed version of the Audi 5000 will be introduced this July, to be followed by several other product developments within the ensuing year.

The company's schedule calls for a 20-valve, five-cylinder engine for the Audi 90; a new Audi coupe, also with the 20-valve engine; and a pricey V-8 sedan.

Audi AG had outlined plans for some of those products last summer, but the timetable has since been juggled. The company had also talked of a sports version of the 80/90 model. To date, however, no production plans have been set.

The successor to the Audi 5000, to be called the Audi 100/200, will feature a more luxurious interior than the current model. On the outside, things will essentially stay the same.

Audi will beef up the Audi 90 Quattro with a five-cylinder, 20-valve engine. It is expected early next year, a spokesman said. The 162-horsepower engine had been planned for the 90 from the start but it wasn't ready for last fall's U.S. debut. Audi's 2.3-liter, five-cylinder powertrain — on which the multi-valve version is based — has been used in the interim.

The 20-valve engine is expected to make its way into other Audi products. One of those will be the new Audi coupe, expected to reach the U.S. market in spring 1989. Its predecessor was dropped last fall.

The new model will be derived from the current 80/90 body but will be five inches shorter. It goes on sale in Europe this fall.

Also due next spring is the 32-valve V-8-engined four-door sedan. The car will mark a step into the $50,000 range for Audi and will assume the ranking of Audi's flagship model. Its 3.6-liter engine will kick out 250 horsepower. No name has been selected.

The spokesman said the schedule could change.

Dealers hope for gains from Buick Daytona win

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Did Bobby Allison's Daytona 500 win in a Buick Regal on Sunday sell cars on Monday?

Reports are mixed from dealers in the Southeast, where interest in stock car racing is strongest, but Buick is apparently convinced that its involvement in the NASCAR Winston Cup series of top-level stock car races is well worth the effort. Allison's Regal captured the checkered flag at Daytona Feb. 14.

Although there is no hard data to support the notion that racing sells cars, there are strong indications, according to Joseph Negri, manager of Buick Special Products.

When Buick's Regal won the NASCAR manufacturer's championship in 1981 and 1982, Regal sales as a percentage of the Buick line were greater in the Southeast than in any other U.S. area.

Chevrolet has won the manufacturer's championship for the last five years. Sales of its Monte Carlo SS model, with aerodynamic aids developed for Winston Cup races, seem to reflect the value of racing.

When the Monte Carlo SS was introduced in 1983, it accounted for 4,714 units, or 4.9 percent of Monte Carlo production that year. In 1987, Chevrolet sold 39,251 SS versions of the 79,045 Monte Carlos it built.

The outside appearances of Winston Cup race cars strongly resemble production models, but each is completely different under the skin. The Regal race car, for example, is rear-drive and V-8 powered while the production car carries front-wheel drive and a V-6.

In an informal Automotive News survey, the Buick dealers contacted did not report a strong link between Regal sales and its Daytona 500 success, but most agreed that racing victories do help sell the product.

Lloyd Buick-Cadillac in Daytona Beach, Fla., sold six Buick Regals during the three days following the race, according to Al Chubb, Buick sales manager. In the 13 days prior to the race, the dealership sold six Regals.

"Two sales were directly as a result of Bobby's win . . . both were performance-minded customers," Chubb said.

One customer was in his mid-30s and the other in his early 40s, while the average age of shoppers at the dealership is about 65, Chubb estimated.

The Buick Motorsports trailer, a rolling exhibition of Buick-powered race cars, appeared at the dealership on Feb. 5, about a week before the race. A Bobby Allison Regal was part of the exhibition.

The appearance of the performance cars is usually tied to major races and is one of Buick's top dealer promotions, Negri said.

Upgraded handling packages with larger alloy wheels are particularly popular, Chubb said. Although the Regal is not a high-performance car, "People like the look of the Regal and are willing to sacrifice performance for style," particularly when customers consider the high insurance rates charged on performance cars, he said.

In Huntsville, Ala., Century Buick Co. failed to see an increase in Regal business because of the Daytona 500 win, said Ben Gilliland, used-car manager.

He predicted that racing success will have some "halo effect" on sales.

At Tony Moore Buick-GMC in Decatur, Ala., Tommy Smith, Buick sales manager, said, "We haven't noticed a great difference in Regal sales. Sales have been going fairly well anyway."

At Yarborough Pontiac-Buick in Jonesville, N.C. (no relation to race driver Cale Yarborough), sales manager Larry Patterson said, "We haven't closed a sale yet, but there is a lot of interest in the Regal."

At Folger Buick in Charlotte, N.C., John Ramantanin, sales manager, said racing victories help — if not immediately, then over the long haul.

Bill Wakefield, of Wakefield Buick in Spartanburg, S.C., said turnout last Wednesday was good. "I haven't seen any rush of customers yet, but today we have more people looking at Regals than before. Looking out my window, I see three couples are looking at Regals. We have ads coming out that tie racing with the Regal."

Neway has big plans for Air Beam system

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

MUSKEGON, Mich. — Lear Siegler is using words like lighter, less expensive and more durable as it gets ready to introduce a new drive-axle air-ride system designed for tractors.

A test driver used words like "sweet" and "smooth" to describe the ride to a passenger in a western Michigan demonstration. He said "lateral movement" and "pitching" of the cab were sharply reduced with the product.

The company's Neway Division here said its new Air Beam suspension for Class 7 and Class 8 on-highway trucks has been under development for three years. It will be sold alongside Neway's existing air-suspension system that was introduced in 1984 and is sold as a major option by all the North American truck builders.

At 928 pounds — for a 38,000-pound GCW truck — it is 126 pounds lighter than the older suspension and is more compact. It has fewer fasteners than others and therefore can be installed and serviced more easily, said Jack Smith, Neway vice president, engineering and quality assurance.

He said the heart of the Air Beam's rigid trailing arm design is the two-pin axle connection, which is top-mounted.

"With this configuration, we provide an energy storage medium that allows the deflections necessary for inter-axle articulation and roll motions, without subjecting other components to life-shortening stress, Smith said.

"There is no torque rod and no special heavy-duty cross members, which reduces cost because there is less axle preparation and fewer pieces to be assembled."

He said the Air Beam suspension's air spring has large volume and straight sides, which help reduce the spring rate. The reduced spring rate translates into better absorption of road shock and a better ride, Smith said. Neway engineers called the low spring rate unprecedented.

"The air spring piston is now part of the equalizing beam, thus the name Air Beam. It is unique," he said.

The equalizing beam is a forging, the end support is a casting, and the air spring piston is a stamping. All are welded into the beam assembly. "This beam is intended to last the life of the vehicle with the bushings being the serviceable items," Smith said.

A leaf spring was tried instead of the forged arm but quickly showed it lacked sufficient durability, said chief engineer Bill Pierce. In laboratory cycling for durability, the Air Beam has run the equivalent of more than one million miles.

Competitive leaf spring air suspensions failed in cyclic durability tests at 81,000 and 160,000 miles, he said. Tests were stopped when the Air Beam proved over 300 percent more durable than competitive leaf spring air suspensions, he said.

Shock absorption protects electrical, air conditioning and cooling systems as well as the truck itself, Pierce said.

Gary J. Schultz, marketing manager, said the company's sales strategy calls for "pull-through" demand. It hopes that requests for Air Beam installations from truck buyers it can reach will cause truck builders to install the Neway system. It will be shown at the three major truck shows in Western Star and Marmon trucks. The shows are the Mid America, the International and TruckCan '88.

Other sales efforts include an ad campaign with a teaser, then a four-color, full-page layout, a direct-mail campaign and personal sales efforts with fleets, Schultz said.

The Air Beam suspension is warranted for five years/unlimited mileage, and air shocks and rubber parts are covered for two years/unlimited mileage, he said.

Computer-aided-design tapes will be available to truckmakers in the fall, either directly from Neway or through the International Graphic Exchange Software.

Schultz said he expects the Air Beam to be offered by all the North American truck builders, including those with proprietary air ride systems of their own.

New computer-training program to aid Cummins' factory workers

COLUMBUS, Ind. — Cummins Engine Co. purchased a new Multistation Training system from Control Data Corp., Minneapolis. Cummins also announced several new programs for its diesel engines.

The Control Data training system is a network-linked system for computer-based training in the factory environment. The system is connected to 30 IBM PC-compatible microcomputers in an on-site network.

The multi-station system installed at Cummins' engine plant in Columbus teaches tradespeople and other factory personnel math and technology skills to help them maintain, repair and operate automated control equipment.

Separately, Cummins announced the availability of National Overhaul Warranty Protection for out-of-chassis overhauls.

In addition to its three NOW plans that back special in-frame overhauls, Cummins now offers its NH/NT/NTA-855 and LT automotive engine customers an out-of-chassis Plan 4 with four alternatives for a customer's needs.

They cover crankshaft replacement, cylinder block replacement, short block installation and engine installation.

The company also said that overhaul packages with Cummins-brand parts are now available at more than 4,000 company distributors and dealers in North America. The packages include six-cylinder kits, liner kits, piston kits or ring sets as well as rod and main bearing sets, an upper gasket set and an oil pan gasket.

Cummins also offers new dual press-fit cylinder liners to provide both an upper and lower press-fit in the cylinder block for increased liner stability and movement.

Cummins also reduced the price of its five separate replacement NT flywheel housings by 41.5 percent, said John Dunn, director of parts marketing for the company.

Ford recalling 103,000 Rangers, will pay $60,000 emissions fine

WASHINGTON — Under an agrement reached with the EPA, Ford Motor Co. will recall about 103,000 Ranger pickups and pay a civil penalty of $60,000 for alleged violation of the Clean Air Act.

Ford notified the EPA last November that its Ranger trucks with 2-liter engines, built during the 1985, 1986 and 1987 model years, were made without certain components that were supposed to be part of the emission-control warning-light system. EPA rules require some makers to install the warning system to alert drivers to replace the exhaust-gas-recirculation valve at set intervals.

The valve will be replaced on the Ford Rangers after 60,000 miles at no charge to the owners. Ford said it expects to achieve a 70 percent owner response. As an incentive for owners to bring in their trucks, Ford will provide a free oil change and oil filter.

Public auction scheduled by Mazda dealer

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

A Texas auto dealer has hired an auctioneer to clear his inventory of 40 new Mazda trucks and 30 cars in a public auction slated for March 27.

Mark Krueger, general manager of Krueger Mazda of New Braunfels, Texas, said he will auction every new vehicle he has in stock plus 30 cars he has special-ordered from Mazda for the event.

Krueger hopes to liquidate his truck inventory and increase his allocation of better-selling cars like Mazda's MX-6 and 626 by hosting the auction.

"I've had trouble getting cars from Mazda," he said. "I have one 626, two 929s and two MX-6s — I can sell 10 of each."

He plans to start the bidding on a 1988 Mazda B-2200 pickup and a 1988 Mazda 323 at $100. Bidding on other vehicles will start at dealer invoice.

The auction also will include 30 used cars.

He said a factory incentive in February and March gives dealers up to $500 per truck sold at straight invoice and should help offset low auction prices.

"If I can sell 15 trucks at a profit and the rest at cost, then the worst thing that will happen is that my allocation will be increased," said Krueger.

A third-generation auto dealer, Krueger also owns a Chevrolet dealership in New Braunfels.

Sales war due to boost auto ad spending again in 1988

By Raymond Serafin
CRAIN NEWS SERVICE

Although many automakers are trying to hold the line on ad spending this year, competitive pressures are forcing some big ad budgets.

That includes industry leader General Motors, which is trying to reverse a disastrous 5-percentage-point loss in market share in 1987, plus a number of small marketers seeking to carve niches.

Overall automobile ad spending growth probably will not match the substantial increases of 1987, but many think the category will continue to grow faster than the ad industry average. Predictions of increases range as high as 20 percent.

A superheated competitive environment drove up ad spending beyond anyone's predictions last year, and the fight for market share is no less bloody now.

The more than three dozen automakers, along with distributors and dealers, have spent heavily to develop brand image, introduce new models and nameplates and regionalize their strategies.

No single source tracks auto spending at all levels, but a compilation of various sources suggests advertising reached $7 billion last year, with spending by importers leading the growth.

A source at one ad agency that tracks spending patterns said passenger-car ad spending in major media by factories grew 29 percent and factory-dealer co-ops went up 21 percent during the 1987 model year, to a combined total of $2.6 billion.

Those figures do not include trucks, which represent 32 percent of all vehicle sales, and they also exclude costs for direct mail, promotions, incentives and ad production.

Robert J. Coen, senior vice president — director of forecasting, McCann-Erickson, New York, said auto ad spending was up 19 percent during the first nine months of 1987, based on tracking of network and spot TV and magazines.

Tom Webb, senior economist for the National Automobile Dealers Association, said dealer ad spending rose 12.5 percent to $3.6 billion during 1987. The total includes about $1.1 billion in dealer contributions to co-op advertising, which he said is growing faster than any other aspect of dealer ad spending.

NADA's figures show that dealer per-unit spending rose 20 percent during the year, which more than offset a 7 percent decline in vehicle sales.

Coen said auto spending will be "well above" the 9 percent growth he forecasts for the entire ad industry.

Two agency sources, who asked not to be identified, were split on Coen's projection. One said his agency is expecting factory and dealer group spending increases in the 20 percent range. "And our projections over the past few years have been consistently low," he said.

The other executive was more cautious, saying that preliminary figures from the first quarter of the 1988 model year showed spending was flat. Spending for the Olympics might change that trend, but 1988 "is a hard year to gauge," he said.

If ad spending levels are off somewhat, it may in part be because Japanese importers are feeling cost squeezes. As their parent companies watch profits fall with every rise in the yen, the U.S. marketing subsidiaries are forced to defend existing marketing budgets.

"A lot of Japanese (automotive) companies are responding to the increased budgets in Detroit by looking at their established ad spending and trying to find out what to do with the numbers they have," said Leon Rosen, national marketing manager, American Isuzu Motors, Whittier, Calif.

But importers overall spent aggressively during 1987. Coen said importers' major media spending soared 47 percent in the first nine months of 1987, compared to the previous year.

Another agency source calculated a 27 percent increase in importers' total spending during the 1987 model year. According to another agency's internal estimates, importers accounted for more than 45 percent of all car ad spending during the 1987 model year, even though their market share was under 33 percent.

Those sorts of numbers leave Detroit agency executives frustrated as they try, with only modest success, to convince their clients to ante up.

"The difference is that domestic automakers regard advertising as an expense, while the Japanese importers regard advertising as an investment," said the head of one agency.

GM traditionally has spent less money per car on advertising than any of its rivals, though GM's sheer size still allowed it to muster more total ad dollars than anyone else.

GM is giving its three newest models a $100 million ad sendoff, a sign the automaker is revving up to win back some of the market share it lost last year. However, more than half of that $100 million reflects a redirection of dollars rather than new spending, sources indicate.

Ford Motor Co. and Chrysler Corp. are taking a conservative approach to spending increases, sources indicated. Both nearly went broke during the early 1980s, and they now are keeping a lid on all expenses — including ad budgets — in order to hold down their break-even points.

Crain News Service reporters Cleveland Horton in Los Angeles and Patricia Strnad in Detroit contributed to this article.

Southeast Toyota dealers deliver 15,000 in 10 days

By Charles M. Thomas —
AUTOMOTIVE NEWS STAFF REPORTER

Southeast Toyota Distributors Inc. estimates it sold 15,000 cars and trucks in a 10-day promotion that began Jan 22. The sale involved 85 percent of its 158-dealer network.

The independent distributor pegged the promotion a "port surplus" and held sales simultaneously at 21 locations in four of the five states in its distribution area. Dealers in South Carolina were shut out of the promotion because state laws forbid sales at off-site locations.

Glen Bullock, director of field operations, described the sale as successful but expensive. Thousands of cars and trucks had to be transported to off-site locations and the company spent heavily on advertising.

"We saturated the media for 10 days," said Bullock. "Inventories and finance staffs were sent to special sites."

He said that Southeast Toyota began planning the promotion six months ago to spur sales in January — a normally slow month.

In addition to inland sale locations, the company also organized sales at Port Everglades in Florida, and at ports in Jacksonville, Fla., and Savannah, Ga.

"Southeast Toyota is very aggressive and so are the dealers," said Bullock. "We have objectives to meet every month from Toyota Motor Sales U.S.A."

Because auto sales have been sluggish for the past several months, Bullock said the promotion was an attempt to build a market.

"The public is price sensitive right now, so low-end vehicles and trucks sold real well," he said.

Special commissions for salesmen included "spinning for dollars" wheels in addition to factory-dealer incentives on trucks, vans and Corolla FX models.

The sales manager for a central Florida dealership said that in spite of inclement weather, the dealership sold 70 vehicles at the Jacksonville port sale. "That's more than we would have sold at the dealership," he said.

Merrill Wiese, owner of Toyota of Wilson in Wilson, N.C., said it was a very effective sale for the dealership, "turning a ho-hum month into a good month."

There was one criticism of the sale by dealers — it should have lasted four or five days. "Ten days is an awful long gig," said one dealer.

Southeast Toyota, an independent distributor for Toyota Motor Sales U.S.A., distributes vehicles in Florida, Georgia, North Carolina, South Carolina and Alabama.

Limited-edition LeBarons

Chrysler Motors will market a limited edition of the LeBaron coupe and convertible this spring. The models are specially equipped and priced to appeal to young upscale buyers interested in sporty appearance and value, the company said. The Limited Edition LeBaron GTC coupe will be priced at $13,995; the convertible will be $16,495. The GTC models are distinguished by a white-only exterior body color and white-out trim. Models are equipped with a 2.2-liter turbocharged engine and five-speed manual transmission.

Reds, metallic gray are top picks

DETROIT — Car and truck producers are paying more attention than ever to new colors and fabrics.

Garnet reds and metallic grays are currently most preferred by customers, said Walter L. Walker, manager of General Motors' color and materials concept studio.

In the last four years, mica — a high-gloss, layered material — has been added to paint for a more "glamorous" finish, he said.

Automakers start developing new colors for cars and trucks three years before they will be used, said Bonnie B. Cunningham, color and trim specialist at Ford Motor Co.'s design center.

To gauge color popularity, automakers attend furniture and jewelry trade shows. Many automotive color experts are members of the Color Marketing Group, an international think tank, according to the Motor Vehicle Manufacturers Association.

Don 'Big Daddy' Garlits is subject of new movie

SAN FRANCISCO — While signing autographs for Mopar performance at this year's NADA convention, Don "Big Daddy" Garlits said a movie is being made about his career as America's premier drag racer.

Garlits, who races under Dodge and Mopar sponsorship, said the film is being produced independently but will probably be distributed by Paramount Pictures.

Bitter scales back, still eyes U.S. after Isuzu deal folds

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Bitter Automobiles plans to line up an independent network of U.S. dealers to sell its forthcoming luxury sports-car range following the collapse of a distribution agreement with American Isuzu.

Erich Bitter, president of the West German carmaker, said last week that he will proceed with revised plans to produce about 2,000 cars a year — one fifth of the original program — with about 1,500 units slated for sale in the United States through a network of about 100 dealers.

Meanwhile, production of the new Opel Omega 3000-based car has been reorganized. To supply American Isuzu dealers with 10,000 cars annually, Bitter had contracted with Steyr-Daimler-Puch to build the bodies and handle final assembly at its plant in Graz, Austria.

Bitter will now revert to the production format on the previous SC model. Bodies will be built by Maggiora of Turin, Italy, and shipped to Steyr for painting and installation of Opel mechanical components.

Trim and final testing for the SC was done at Bitter's facilities in Schwelm, West Germany, but the new car will be shipped directly to dealers from Graz.

Bitter asserted last week that bank approval for the investment in the new car is secure despite the setback.

"We have a commitment," he said. "It is definitely no problem because the amount of money I need now is much, much smaller."

He said news of the Isuzu collapse has generated substantial interest among potential dealers in the United States.

"We will continue to go with some of the dealers we had before and add others," said Bitter. "We received a lot of applications after people heard about Isuzu, and we've started going through those applications."

Bitter said the new scenario opens up opportunities for retailers with more experience selling luxury and performance models than Isuzu dealers, but who had been closed out of participation under the agreement.

Even without Isuzu distribution, Bitter's production plans far exceed the levels achieved on the eight-year-old Opel Seantor-based SC, 200-300 of which were built annually.

Bitter said he will have a "production quality" prototype of the convertible at next week's Geneva auto show, as well as full-scale models of the subsequent hardtop coupe and four-door versions.

He said he will stick with the plan to begin producing the convertible in October. He said the agreement with Maggiora calls for 50 units per month by next January and achieving the full output of 150 cars monthly by March 1989.

The retail price will exceed $40,000 in the United States based on current exchange rates. The car was originally pegged for the mid-$30,000 range — precisely the sore point that led to cancellation of the agreement with Isuzu.

"We never really worried about the price of the car," said Bitter. "I understand their position, but I'm used to selling cars that cost twice that much. I don't care what the dollar does. The entire Bitter company is very happy that we can go on by ourselves and not worry so much about cost."

Steyr officials say the scaled-down Bitter program is not a big blow for the Austrian company.

"I'm not greatly disappointed because I saw it coming," said Chairman Otto Voisard during an interview last week. "We did not really use it as a base for our future planning."

"In the United States, Erich Bitter has already found some remarkable interest from dealers in such a car," said Juergen Stockmar, Steyr executive vice president in charge of production and four-wheel-drive research at Graz. "He thinks he can sell 1,000-2,000 units in the United States, and he also has dealer contracts here in Europe. So we are quite optimistic that we will be able to produce at least 2,000 cars per year within the near future.

"But from 10,000 cars per year to 2,000, you have to rethink production totally," he added. "It's not the same production concept. It's totally different."

The new Bitter will be sold in the United States by a new company in which Erich Bitter owns 50.8 percent and former Volkswagen of America sales manager Samuel Tucker has 40.8 percent. The new group, Bitter Automobiles, has no legal connection with the old Bitter organization, which produced and marketed the previous model. The new Bitter company will pay royalties on the sale of the car to the old firm, which is made up of Bitter and 11 partners.

Feb. 1-10 sales rise

Extra day brings domestic gain of 12%

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Aided by an extra selling day, early-February sales of U.S.-built cars outpaced last year's deliveries for the same period by 12.85 percent.

Of the eight U.S. carmakers, only Honda and Nissan sold fewer cars this year than last.

"The first 10 days of this month were very good, although we're not quite back to normal," said Don Giambrone, vice president of Celozzi-Ettleson Chevrolet, Elmhurst, Ill.

Phil V. Naylor, president of Naylor Chrysler-Plymouth, Ann Arbor, Mich., said his sales have nearly doubled this year. "Incentives and the auto show in Detroit helped turn around sales," he said.

In the first 10 days of February, sales of U.S.-built cars totaled 192,001 compared to 170,134 in the same period a year ago. However, the early February total dropped 18.12 percent below the final 10 days of January 1988, when 234,487 cars were delivered.

The average daily selling rate edged up slightly to 21,333 compared with 21,267 last year. There were nine selling days in the period this year and eight last year.

The Big 3 reported increases of 7 percent to 27 percent over last year. Chrysler Motors' sales surged ahead 26.87 percent in the first 10 days of February. Chrysler Division's sales rose more than 60 percent over the year-ago period.

Ford Motor Co.'s car sales continued to climb with a gain of 19.16 percent for early February. Ford Taurus showed the biggest gain.

"We've sold a pretty good mix of cars and trucks. Both are up about 25 percent over last year. Mustang GTs and Thunderbird Turbo Coupes are always strong," said Mike Murphy, general sales manager, Key Ford Inc., Pensacola, Fla.

General Motors reported the highest Feb. 1-10 car and truck sales since 1979, according to C.N. "Bud" Moore, vice president, customer sales and service staff. GM's car sales rose 7.78 percent over last year's.

Transplants Volkswagen and Toyota sold more cars, too.

Mazda	351	—
U.S. Industry Total	192,001	170,134

Toyota's sales of U.S.-built cars almost doubled and VW sold nearly a third more U.S.-built cars than it did in the equivalent period of 1987.

Honda delivered 4.30 percent fewer cars in the Feb. 1-10 period this year, and Nissan's sales fell 38.73 percent. Mazda, which was not making cars in the United States a year ago, sold 351 cars produced at its Flat Rock, Mich., plant in the first 10 days of February this year.

Mexico car output up 42% in '87; exports soar 503%

By Stephen Downer and Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTERS

The five automakers based in Mexico produced 266,142 cars in the 1987 calendar year, 42.01 percent more than the 187,409 built in 1986.

Export car production rose from 20,502 vehicles in 1986 to 123,706 last year, an increase of 503 percent. Ford led the way with 51,773 Mercury Tracers produced at its Hermosillo plant in the northwestern state of Sonora. The plant opened in November 1986.

Ford's total 1987 output of 67,578 cars compares with 20,016 built in 1986.

Chrysler which, unlike Ford, produces domestic and export market cars on the same line at its Toluca plant just southwest of Mexico City, produced 41,034 for export, up tremendously from the 15,147 built for export in 1986.

Chrysler's total car output was 64,208 in 1987, 50.70 percent more than the preceding year's 42,606.

General Motors, which announced last spring that it will be exporting 120,000 A-cars to the United States annually by about 1989, turned out 20,724 Celebrity A-car models at its export engine and vehicle assembly complex in Ramos Arizpe, near Saltillo in northeastern Mexico.

The total was considerably more than the 4,700 A-cars a company official originally said would be produced and exported in 1987. GM exported no cars from Mexico in 1986.

MEXICAN CAR PRODUCTION
Calendar year 1987 vs. 1986

	1987	1986
Chrysler	64,208	42,606
Ford	67,578	20,016
GM	32,242	14,260
Nissan	58,461	49,791
Volkswagen	43,653	60,736
Total Cars, Mexico	266,142	187,409

GM's total production of cars in Mexico was 32,242 in 1987, more than double the 14,260 built in 1986.

Nissan produced 58,461 cars last year, of which 10,175 were for export. In 1986, total output was 49,791 with 5,250 built for export.

The only company with no car export program last year was Volkswagen, though that will change this year. The company's Puebla plant, 80 miles southeast of Mexico City, will be the major beneficiary of VW's decision to close its Westmoreland, Pa., plant later this year.

VW built 43,653 cars in 1987 for the Mexican market, a decrease of 28.13 percent from 60,736 in 1986. Export production in 1986 for VW was 105 units.

VW launched a five-year, $500 million reinvestment program in Puebla in 1986.

Nissan developing 1990 Sentra in U.S.

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

Body component engineering for Nissan's next-generation two-door Sentra is under way at the company's assembly plant in Smyrna, Tenn. It represents a major step in the company's goal to design and build cars in their entirety in the U.S. market.

In addition to doing engineering at the plant, top Nissan Motor Manufacturing officials said last week they are studying the addition of another product line as well as an engine assembly operation at the plant.

Jerry Benefield, who recently took over as president of Nissan Motor Manufacturing from Marvin Runyon, said Pathfinder is among the products that have been studied. While nothing has been ruled out, he indicated that the sport-utility vehicle with its unitary body construction is more complicated to produce than the truck and would be difficult to incorporate in the plant's production flow.

Robert Drake, vice president of engineering and purchasing, said the plant's new CAD/CAM system is running, and engineering on the 1990 replacement for the Sentra two-door has begun. Drake said the two-door will be exclusive to the United States. As a result, the engineering and sourcing will be done here.

"We're working from the clay model," Drake said, underscoring the extent of the U.S. engineering effort.

The additional component sourcing generated by designing the body in the United States will push Sentra's domestic content to 70 percent, Drake said. He added that even higher levels will be attained if Nissan decides to build engines at Smyrna.

Domestic content of both cars and trucks produced at the plant is between 50 and 55 percent. Currently, engines and transaxles are sourced from Mexico and Japan. Beyond the engine plant, both Benefield and Drake said Nissan is evaluating the possibility of adding transaxle assembly to the site.

Those plans are consistent with a recent announcement by Takeshi Tanuma, president of Nissan Research & Development, which oversees the company's U.S. design and engineering functions. Tanuma said local content of 90 to 95 percent is a realistic target for the Smyrna plant.

The continuing decline of the dollar has also enhanced the viability of Nissan's U.S. manufacturing effort. Benefield said the plant's original target for profitability was 350,000 units per year, but now, with the increase in the value of the yen, the plant can make money at its current output of 240,000 units per year.

Japanese firms eye Ford imports

TOKYO — Two large Japanese trading firms have expressed interest in importing Ford-badged cars.

C. Itoh & Co. is considering a plan to establish a distribution network in association with Mazda Motor Corp.'s Autorama chain. C. Itoh previously handled Ford vehicles but discontinued sales when sales went flat after the Arab oil crisis in the 1970s.

Mitsui & Co. also has expressed interest in selling Ford products.

Mazda, meanwhile, has shown interest in becoming an importer. Earlier this month, Mazda said it will import 800 Ford Probes. The Probe uses the same platform as the Mazda MX-6; both cars are built at the Flat Rock, Mich., assembly plant. Probe will be exported to Japan some time after its U.S. launch on May 12.

Though Mazda acknowledges a hoped-for goal of 3,000 to 4,000 Probe units, the company will wait and assess the car's U.S. sales.

Mazda also is considering plans to import a five-door Festiva model made by its Kia affiliate. The car is sold in Korea as the Pride. Analysts say obstacles, including badging, pricing and who will actually sell the car — probably won't be resolved before 1989. Even so, the Kia Pride — known by Mazda as the 121 — could be the first Korean import to Japan.

PRODUCTION

Car output steady, far below 1987

By Kelley Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Last week's scheduled domestic auto output totaled 132,374 cars, slightly below (0.57 percent) the prior week's 133,137 and 22.93 percent below the year-ago week's 171,761.

So far this year, 868,757 cars have been assembled, 24.93 percent below the 1,157,256 completed last year at this point.

Companies split last week's targeted production as follows: General Motors, 45.64 percent; Ford Motor Co., 27.79 percent; Chrysler Motors, 16.70 percent; Honda of America Manufacturing Inc., 5.44 percent; New United Motor Manufacturing Inc., 2.46 percent; Nissan Motor Manufacturing Co. U.S.A., 1.01 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 0.96 percent.

Volkswagen of America's plant in Westmoreland, Pa., was idle last week for inventory adjustment. The plant was scheduled to resume output today.

Truck production was estimated at 86,039 units last week, 5.14 percent more than the previous week's 81,834 and 15.68 percent more than the year-ago week's 74,376.

Year-to-date, 581,322 trucks have been built, 6.82 percent more than the 544,187 assembled last year at this time.

Ford closed its Wayne, Mich., plant today for changeover for the 1988½ Escort. The plant is scheduled to resume operations Feb. 29.

Chrysler's Jefferson Avenue car plant in Detroit closed last week until March 7 for inventory adjustment. Approximately 2,800 hourly workers are temporarily laid off.

Chrysler's Newark, Del., car plant remains down for inventory adjustment. The plant is slated to reopen Feb. 29.

GM scheduled overtime last Saturday at its Baltimore and Flint, Mich., truck plants.

Ford slated overtime last Saturday at its Wixom, Mich., and St. Louis plants.

All Ford plants are scheduled for daily overtime this week except the Edison, N.J., and Wayne, Mich., car plants.

Canadian cars post 11% gain

Canadian automakers scheduled production of 24,150 cars last week, the highest since the week ended Dec. 20, 1986, when 24,896 cars were built.

Last week's estimated build was 11.09 percent more than the previous week's 21,739 and 17.58 percent more than the year-ago week's 20,540.

So far this year, 155,930 units have been assembled, 13.63 percent more than the 137,231 completed last year at this point.

Truck production was targeted at 19,573 units last week, 5.25 percent more than the prior week's 18,596 and 10.96 percent more than the year-ago week's 17,640.

Year-to-date, 129,799 trucks have been built, 14.45 percent more than the 113,413 assembled last year at this time.

Japanese dealers fear U.S. snub

Owning stores here has risks, they say

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Some Japanese dealers may be eyeing the U.S. market, but the idea has its skeptics.

Isao Makino, former head of Toyota's American operations and chairman of Tokyo Toyo-Pet, the most profitable dealership in Japan, said, "To do business in the United States, it must be done by American people."

Makino said Japanese people tend to be hard-working and make so much profit that other countries may not welcome them.

As for the difficulty involved in dealers moving to the United States, Makino said, "I have always thought it important not to stimulate Detroit, not to have conflict with Detroit. I may be overly concerned about that, but that is my view."

Masaru Izumi, president of the Japan Automobile Dealers Association, views the move to the U.S. market as a natural result of the growing interdependency of the auto industry worldwide and the increasing signs of internationalization in the Japanese market.

Izumi pointed to moves by Daimler-Benz, Volvo and BMW to set up subsidiaries in Japan. He said Japanese dealers, too, may develop an outward posture.

Izumi is also president of Tokyo Nissan, the largest publicly held dealership in Japan. It already has an operation in Vancouver, British Columbia; is planning another near Toronto and has expressed

UAW members rally outside Chrysler's headquarters to protest sale of Acustar

Chrysler: Cash not the key

Company says Acustar on block for other reasons

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. said it is seeking to sell its Acustar parts-making subsidiary primarily to allow it to concentrate on product and powertrain development, but the company acknowledged that the sale would generate money for investments.

Chrysler was responding to a statement made last week by UAW Vice President Marc Stepp, who said Chrysler Motors Vice President for Industrial Relations Anthony St. John told him that the company is seeking the sale for several reasons, including "cash-flow problems."

Stepp, who is seeking to block an Acustar sale, said Chrysler is negotiating to sell the $3 billion component subsidiary to raise money for "capital improvements, borrowing needs, research and development and so forth."

"If Iacocca and company overextend themselves in buying American Motors Corp., buying Gulfstream Aerospace, buying some technology operations, why should workers be penalized for their misjudgments or their greed?" Stepp asked at a press conference following a meeting Thursday of the union's National Chrysler Council. The meeting was called to protest a potential Acustar sale.

In a statement issued in response to Stepp's remarks, Chrysler said the "potential sale of Acustar would generate funds for future investments, but the primary reason we would sell Acustar is because, long-term, we want to concentrate our resources on new product and powertrains rather than components."

"In this business you can never have enough cash," the company said. "But at the end of 1987, we had $2.4 billion in cash and

Rising sales fail to quench incentive fire

By Francis J. Gawronski and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

Despite encouraging signs throughout the industry, automakers and importers are intensifying their incentive efforts. Several new programs were reported last week, and others were expanded or sweetened.

The announcements coincided with good news from the sales and production fronts. Aided by incentives, domestic new-car sales rose 11.87 percent in the Feb. 11-20 sales period over the same period in 1987. This followed a gain of 12.85 percent in the first 10 days of the month.

And the February advances followed an upturn of 22 percent for domestic and imported cars in January. Cheers for the January jump were tempered by the fact that January 1987 was an especially poor month, but the industry can point to gains in each of this year's five 10-day sales periods.

On the production side, General Motors had upbeat news last week. It is adding 175,000 cars and trucks to its schedule for 1988 by reopening one plant and adding second shifts and increasing overtime at others.

Nevertheless, there are new incentives as the industry continues to be a victim of the Catch 22 situation it has constructed in the past few years: Incentives are offered to boost sagging sales; but when sales improve, the incentives must be continued because customers expect them and won't buy without them.

Chrysler Motors announced a program that guarantees the resale price of Eagle Premiers sold in Canada. Chrysler Canada officials said it may become the basis for a similar program in the United States, although no date was given on when it could begin in the United States.

Cadillac, meanwhile, sweetened its Allante dealer incentives, now offering as much as $4,000. Oldsmobile began a $2 million program of incentives to salesmen on all 1987 and 1988 models in dealer stock. Chevrolet extended until April 30 its consumer rebates on most of its cars.

Ford Motor Co. began offering dealer incentives on both retail sales and leases. Toyota is offering incentives to dealers and their sales staffs on cars made in California as well as on trucks, vans and Land Cruisers. Isuzu's program offers up to $700 per unit to dealers and advertising bonuses of up to $750 per unit, trips to the Summer Olympics in Korea and incentives to salesmen.

CHRYSLER CANADA: Chrysler Canada said it will guarantee the resale value of its 1988 Eagle Premier against the Ford Taurus, Oldsmobile Calais and Ciera, Buick Skylark and Century, Chrysler LeBaron and Dodge Lancer.

Chrysler is guaranteeing those who buy or lease a 1988 Premier during the 1988 model year that the car will retain its value against the best resale value of the seven competitive models. Resales prices will be set by average wholesale prices at private auctions in Canada.

The owner or lessee must buy a new Jeep or Eagle vehicle 24 to 48 months after purchasing a Premier. If the resale value of the Premier is lower by percentage of original list price, Chrysler will refund the customer the difference. The money can be used toward the purchase of a new vehicle or can be taken in cash, as long as a new Jeep-Eagle vehicle is purchased.

No dealer financial participation is required.

Other companies such as Jaguar, Audi of America, Cadillac and Ford Motor Co. are using guaranteed resale programs for upscale models.

CADILLAC: Cadillac is offering its dealers rebates on every 1987 Allante sold between Feb. 20 and May 31.

Dealers who sell unused 1987 Allantes receive $2,500 per unit while dealers who sell 1987 Allantes used as

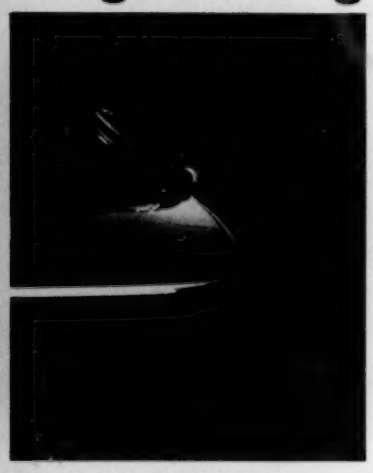
'Engineering for 1990s' is SAE theme



SAE show begins today in Detroit

DETROIT — More than 40,000 persons will gather here this week for the 1988 SAE International Congress & Exposition at Cobo Hall.

The theme for the Feb. 29-March 4 event is "Engineering for the '90s — Imagination, Innovation."

Calling it "the largest technical conference of its kind," SAE said more than 500 exhibitors have sold out Cobo Hall's 167,000 square feet of display space. Approximately 200 half-day technical sessions are planned, including a record 700 technical presentations.

Scheduled to deliver today's opening keynote address is Anthony C. Rudd, deputy chairman of Lotus Engineering and technical director of Group Lotus PLC.

Race car driver Al Unser Jr. will deliver a presentation on high-performance driving during a special Family Night event tomorrow.

Also on Tuesday, Thomas L. Ford and Fred S. Charles, a manager and engineer, respectively, at Goodyear Tire & Rubber Co., will present the annual Buckendale Lecture on "Heavy-Duty Truck Tire Engineering."

Featured speaker at the SAE International Banquet on Thursday evening, March 3, will be GM President Robert Stempel. More than 5,000 SAE members and guests will attend the sold-out affair.

Scheduled to be inducted for a one-year term as 1988 SAE president is George D. Aravosis, director of technology planning of Navistar International Transportation Corp. He will succeed William S. Coleman, director — new product opportunities, Eaton Corp.

Technical session topics will include: plastic use, chlorofluorocarbons, automotive electronics, fuels and lubricants, manufacturing engineering, materials, and service and maintenance.

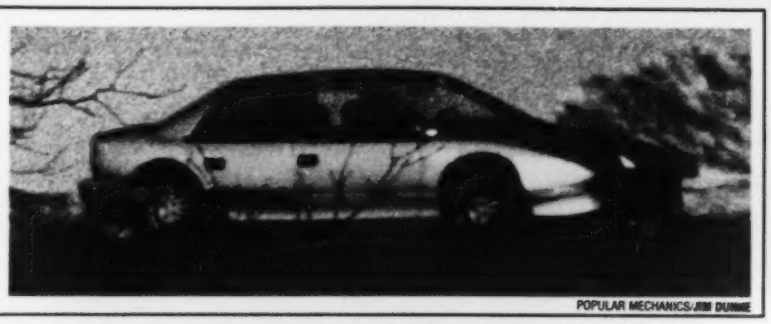
Saturn Corp. is now testing prototypes of its four-door model. Production begins in the summer of 1990. Both the four-door and a coupe will be sold by a new dealer network as 1991 models.



POPULAR MECHANICS/JIM DUNNE

Another U.S.-made Nissan

Tenn. plant expects to make 2nd car, engine, components

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Nissan intends to build engines and other parts at its Tennessee plant and is planning to add a second car line — a move that would increase capacity by 100,000 or more units.

Nissan Motor Manufacturing Corp. U.S.A. said last week that it will recommend the component program to its Japanese parent. The manufacturer also said it is studying the possibility of building a second car along with the Sentra and Nissan pickup at the Smyrna, Tenn., facility.

Jerry Benefield, president of Nissan Manufacturing, indicated that he was confident that both plans will be approved. Nissan Manufacturing and Nissan Motor Co. in Japan have agreed on a strategy to expand car production, he said. They still must decide what the product will be and when it will be built.

Whatever that product, it will likely be "a little more upscale" than the subcompact Sentra, Benefield said.

The additional line would raise capacity to somewhere between 350,000 and 400,000 units, Benefield said. Currently the plant can produce 265,000 units annually. In 1987 it turned out 213,000. The plant's paint, stamping, and body assembly areas will have to be enlarged to make way for the second car line, Benefield said. The expansion will also require Nissan to build an addition to the existing plant.

Under the components plan, Sentra engines and truck axles would be produced in Smyrna. Front and rear bumpers for a new Sentra, due in 1991, would also be built.

Currently, Nissan builds engines for the U.S. Sentra in Japan and Mexico. The axles come from Nissan in Japan. Magna International, a Canadian firm, supplies the bumpers.

Benefield said costs for the parts expansion will be reviewed at the April board meeting. But the prospect has become clearly more attractive in the five years since the plant opened.

"We did not think we could do our engine assembly or axle assembly before because our studies said we couldn't make any money doing it," Benefield said.

The addition of the components isn't expected to bring any new jobs to the plant, Benefield said.

Nissan Manufacturing's plans will help bring the company several steps closer to its goal of becoming a self-sufficient U.S. automaker.

They also signal some bullishness about prospects in the U.S. market — despite a disappointing 1987. The company has restructured its U.S. operations over the past 12 months and will launch four all-new products in the 1989 model year.

"I think it indicates that they (Nissan Motor Co. in Japan) believe the future will be different than the present," said Benefield.

The weakened dollar has also played a big role, making it more attractive for Nissan and other Asian makers to build vehicles in North America.

"What we hope to accomplish in this country is to be able to design and produce vehicles for this market," he said. "I don't think the yen is going to go back to 260 (per dollar), and I think it makes sense in the long term to produce (here)."

The expansion plans also tie into Nissan's announcement earlier this year that it will add 200 engineers and other employees at its research and development center in Ann Arbor, Mich. The centers' role will be to design new vehicles for the U.S. market.

The increased U.S. production could also serve as a defense against the possibility of tighter restraints on Japanese imports, Benefield acknowledged.

Nissan's plans echo those of other Japanese makers in the United States. Honda plans on increasing car and engine output in Ohio while expanding its research and development activities. Toyota has decided to build engines and other components at its assembly plant in Kentucky.

Despite last year's decline in production, Nissan's Smyrna plant will be profitable this fiscal year (ending March 31) for the first time since it opened in 1983, Benefield said.

Unlike in previous years, the company had no major capital spending programs in the last year. Benefield cited better productivity and the addition of more locally sourced parts as other reasons for the profit.

The plant was designed to be profitable at 220,000 units with the yen valued at 220 to the dollar, Benefield said. It produced nearly that many vehicles last year, and the yen is now valued at about 130.

Benefield said Nissan Manufacturing had studied Smyrna as a possible site for the minivan to be produced jointly in the U.S. by Ford and Nissan. That location was rejected — in part because projected volumes had declined from 200,000 to 100,000, he said.

Benefield also said that the minivan wasn't right for Smyrna because it was very different from the Sentra and pickup built there now. Adding the minivan would have required significant modifications to the plant, Benefield said. The new car line, in contrast, can be added at a comparatively minimal cost.

Nissan's plans come at a time when many experts predict severe overcapacity in the U.S. automotive industry. That prospect doesn't concern Benefield.

"I think some of the capacity that we define in this country is really obsolete capacity," he said. "If you want to define capacity as facilities that can produce with high quality and high efficiency, we probably don't have overcapacity."

Ford-Nissan van eyed for Ohio plant

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Ford and Nissan have apparently targeted Ford's Ohio Truck Works plant as the site of their joint effort to build a minivan.

A source familiar with the project said the automakers are planning to convert the facility into a self-contained assembly plant. Ohio Truck, in Avon Lake, Ohio, currently produces bodies for Econoline and Club Wagon vans. They are then shipped about 17 miles to Ford Motor Co.'s plant in Lorain, Ohio, for final assembly.

A Ford spokesman, however, said that a feasibility study of the proposed venture has not been completed and nothing has been approved. A union official said the site is being considered.

Phillip E. Benton Jr., president of the Ford automotive group, toured the Ohio Truck Works and Lorain plants last week. On Friday, he announced that Ford is spending $230 million to prepare Lorain for production of the all-new Ford Thunderbird and Mercury Cougar, which go on sale as 1989 models later this year. In conjunction with that program, an additional $90 million is being invested at the Walton Hills (Ohio) stamping plant.

Ford and Nissan announced last spring that they were exploring the possibility of jointly producing a vehicle. Last week, the firms said that a preliminary study yielded enough "common ground" to warrant a second research phase. A recommendation on whether the project should be carried out is expected to reach the boards of each maker in May.

Sources have said that the venture will produce about 100,000 minivans annually (Automotive News, Dec. 7, 1987) beginning in the early 1990s. They will be sold through Lincoln-Mercury dealers and through Nissan's U.S. dealer network.

It is unclear how output volume of the Econoline/Club Wagon bodies would be affected by production of the minivan in Avon Lake. But there is plenty of property around the site that could be used for expansion.

Nissan's U.S. manufacturing arm announced last week that it will not be producing the van. The project would require Nissan Motor Manufacturing to make extensive modifications to its assembly line, officials said. Nissan Manufacturing now hopes to add a second car line to its plant, in Smyrna, Tenn.

In other announcements last week, Ford said that it has invested $50 million in its Livonia, Mich., transmission plant. The effort will help increase output of four-speed automatic overdrive transmissions for large, rear-drive cars and light trucks by nearly 13 percent.

In addition, Ford is planning to add a second shift to its Michigan Truck plant in Wayne, Mich., sources said. The increase, expected in November, would reduce to three the number of Ford plants in North America not producing on double shifts. Company officials have said that they will work to full capacity at existing plants before looking for new ones.

The plant, which currently turns out about 45 Bronco and F-series trucks per hour, will produce 37 per hour on each of the two shifts, one insider said.

The increased production reflects the continuing strong demand for Ford trucks. The company's overall truck sales increased by more than 5 percent in 1987, and the company expects further gains this year.

The changes at Michigan Truck also appear to be tied to production shifts being discussed at Ford's Twin Cities assembly plant. Twin Cities is expected to add the Ranger to its lineup in addition to the full-size F-Series pickup trucks and mid-size Ranger Supercabs it now produces, said Robert Olson, president of UAW Local 879. With the addition of the Ranger, some of the F-Series output will be taken up at Michigan Truck.

Ford's output of trucks in recent years has been limited by a shortage of automatic transmissions. But that situation is expected to ease through 1989 as transmission output increases at two Ford plants.

At the Livonia plant, Ford is using a combination of new machinery and ideas generated by employee teams to free bottlenecks and increase efficiency. The changes will allow Ford to boost capacity of the rear-drive transmissions by 100,000 and bring total annual output to 895,000. The plant also produces the four-speed automatic transaxle used in the Ford Taurus, Mercury Sable and Lincoln Continental.

Other help on the transmission front will be coming in 1989 from a new electronically controlled automatic — to be used primarily on the F-250 and F-350 trucks — to be built at Ford's Sharonville, Ohio, assembly plant.

"We think we've greatly eased the situation, but it remains to be seen if we have enough rear-wheel-drive transmissions," said Henry A. Nickol, general manager of Ford's Transmission and Chassis Division.

At the Lorain plant, $124 million will go toward expansions that will create two assembly areas. A total of 40,500 square feet will be devoted to body assembly with new tooling and equipment.

A second, 90,000-square-foot, addition will house operations that will allow engines to be inserted into the rear-drive cars from the bottom — a highly unusual method.

The T-Bird/Cougar program itself represents a $1.1 billion investment for Ford.

In 1987, Lorain produced nearly 296,000 Thunderbird/Cougars and more than 236,000 Econoline/Club Wagons, the company said. The complex covers 3.5 million square feet and is Ford's largest assembly plant in North America. It employs more than 5,600 people.

In other plant news, a three-week strike at Ford's engine assembly plant in Chihuahua, Mexico, carried onthrough press time Friday. Negotiations were continuing.

The walkout threatens to cause shortages of the 2.3-liter engine used in the Ford Tempo and Mercury Topaz. Chihuahua is one of two plants producing the Tempo/Topaz engines. What started as a four- to five-week supply of Chihuahua engines is dwindling as the strike carries on. The engines are also built at Ford's engine plant in Lima, Ohio.

Automotive News Staff Reporter Francis J. Gawronski in Los Angeles contributed to this report.

Russell wins award for articles on Romanian import controversy

NEW YORK — John A. Russell, Automotive News staff reporter in New York for the past decade, received one of 19 certificates of merit presented at the Association of Business Publishers' 34th annual Jesse H. Neal awards luncheon here Wednesday.

Russell was saluted for a series last year on the companies that claimed the rights to import Romanian-made cars into the United States. At the center of the controversy was Roman Motors Corp., a Miami-based company, which senior Romanian trade and political sources insisted did not have the rights.

Another certificate of merit was awarded to a team from Advertising Age, another publication of the Crain Communications group, for its coverage of the J. Walter Thompson buyout.

Russell

The Neal awards are presented to reporters and editors for outstanding editorial performance. William J. O'Donnell, president of Association of Business Publishers, hailed the winners for their "outstanding style in the face of the keenest competition."

The panel of 15 judges was chaired by Henry F. Schulte, professor of journalism at Syracuse University.

S. Africa car sales rise for 1987, first gain since 1981

By Jeremy Sinek
SPECIAL CORRESPONDENT

JOHANNESBURG, South Africa — Despite a decline in sales in December compared with November, South Africa's automakers ended 1987 on a note of satisfaction and optimism.

More important than the month-to-month drop from 18,620 to 15,067 car sales was the fact that the December 1987 figure was 32.2 percent better than the year-ago month's and lifted the full-year tally above 200,000.

The precise figure of 200,824 was a gain of 15.1 percent over 1986 and was the first time since 1981 — when the industry scored an all-time high of 301,528 — that car sales had bettered the previous year's figures.

The progress in the light-truck and bus sectors was even more marked, a 22 percent gain from 78,935 to 96,346 for the full year. With medium and heavy trucks up by 6.1 percent, total industry sales were 309,150, a 16.8 percent improvement on 1986's 264,676.

Moreover, automakers reckoned that sales could have been 5 or 10 percent higher had it not been for supply shortages.

Various factors aggravated the shortages. Mercedes-Benz's nine-week strike cost the company some 4,500 cars. Volkswagen lost 10 days to industrial strife. Toyota and a number of component manufacturers had to shut down for a while after the Natal flood.

3 Mazda, Ford

Although Toyota remained the market leader in every sector except heavy trucks (where Mercedes led), it lost market share for the second consecutive year, slipping from 26.0 to 24.8 percent in cars and from 39.3 to 37.0 percent in light commercials.

VW picked up the most sales. Its 39,970 sales boosted its car market share from 17.4 to 19.9 percent, demoting the Ford-Mazda-Mitsubishi combine Samcor (39,878) to third place in the standings.

Mercedes strike cut sales from 19,468 to 18,571 and dropped it from fourth to fifth place. Nissan moved up to fourth. Nissan restyled both its passenger-car lines — the Sentra subcompact and the Skyline medium-sized car — during the year, and the new models posted spectacular gains in their first few months on the market.

In the first nine months of 1987, Nissan's small-car line, for example, averaged 767 units per month. In the fourth quarter, after the new Sentra came on stream, it averaged 1,625 per month.

The former GM South African, now trading as Delta Motor Corp., performed ahead of expectations in its first year.

Helped by the introduction of the Opel Monza (Pontiac LeMans) subcompact sedan and despite critical stock shortages toward the end of the year, its passenger-car sales rose 21.2 percent from 13,954 to 16,913, and market share climbed from 8.0 to 8.4 percent.

BMW sold 16,113 cars, a 23 percent increase over 1986 and enough to boost its market share from 7.5 to 8.0 percent.

$32,000 Aussie car

GM Commodore a road version of racer

By Pedr Davis
SPECIAL CORRESPONDENT

Most expensive Holden's ever

SYDNEY, Australia — Holden's Motor Co., General Motors' Australian subsidiary, has introduced a high-performance version of the 1988 Commodore.

The new car is faster and more aggressive looking than the "Bathurst Specials," built during the 1970s to compete in this country's annual production races at Bathurst, New South Wales.

The car is called the SS Group A and based on the current VL Commodore. It is a limited-edition, road-going version of Holden's 1988 race car. And with a sticker-price over $32,000, it is easily the most expensive vehicle ever to wear a Holden's badge.

The Group A signals Holden's determination to take on the big European and Japanese automakers on the international touring car circuit.

The Commodore had disappointing results on the race track in 1987. The year also saw the end of the longstanding Holden-Peter Brock partnership, which has been responsible for a line of highly successful high-performance Commodore race cars.

As a result, Holden's brought in Britain's Tom Walkinshaw racing group to undertake the wind-tunnel development of a completely new body kit.

It also commissioned Holden's Engine Co. to revamp the V-8 in time for the 1988 season.

While development of the Group A car was under way last year, Holden's negotiated a 10-year contract with Walkinshaw to operate a new Australian-based organization called Holden Special Vehicles.

The organization, which is responsible for building the new model, will modify Commodore models produced on Holden's production line and eventually launch high-performance versions of other Holden products.

The Group A has a body clad with more than a dozen fiberglass aerodynamic aids and is powered by the most potent Aussie V-8 to date — a substantially reworked version of Holden's familiar 4.9-liter V-8.

The engine features electronic fuel-injection and puts out 240 horsepower. In race form, the engine could be boosted to about 500 hp.

The top speed of the road-going version is an estimated 148 mph. The company said the car can sprint from zero-to-60 mph in 6.3 seconds and cover the quarter-mile in under 15 seconds.

Only 750 will be built including the 500 units needed to comply with race regulations. The extra 250 are to satisfy the consumer demand.

ACS to build plant in Germany for Porsche 944 cabriolet project

GENEVA — ASC Inc., a worldwide automotive supplier, has unveiled plans for the construction of an assembly plant in Heilbronn, West Germany. The facility will support the Porsche 944-S cabriolet program, a joint effort of Porsche AG and ASC.

The building is scheduled to be completed by Oct. 1. It will cover 82,000 square feet on a 5-acre site. Eighty persons will be employed.

The ASC facility will provide the components, tooling and special assembly work for the Porsche 944-S cabriolet. In addition to assembly operations, the plant will have a development and engineering area to support research and future programs.

The ASC site was purchased from the city of Heilbronn. The facility will be near the Neckarsulm plant where 944 models are built.

Heinz C. Prechter, ASC chairman and president, said, "Much appreciation is extended to the city officials of Heilbronn for their assistance in locating this site for ASC's first European facility. We look forward to beginning our operation in Heilbronn and furthering our relationship with the community in which our facility operates."

The 944-S cabriolet is expected to debut in 1989. The program is one of two joint relationships between Porsche AG and ASC. Porsche recently designated ASC as its purchasing consultant in North America.

Ford begins output of Taurus in Mexico

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Ford Motor Co. has begun production of the Taurus four-door sedan and station wagon in Mexico.

The Taurus is made at Ford's plant just north of Mexico City in the municipality of Cuautitlan. The present generation Topaz — also new in Mexico this model year — Thunderbird, Cougar and pickup trucks are assembled at the plant as well.

John Ogden, president and director general of Ford's Mexico operation, said the company invested $40 million re-equipping the Cuautitlan plant last year, mainly for assembly of the Taurus and new Topaz.

Investments aimed at improving domestic market production will probably amount to $30 million this year, he said.

Production at Cuautitlan was suspended for 100 days last summer due to a strike over wages. Ogden said the work action cost the company 15,000 vehicles.

"It was a very expensive strike," said Ogden.

The labor dispute contributed to pushing Ford's market share for cars and trucks to fifth and last place in 1987.

Ogden said Ford has no plans to produce a lower-priced or smaller car than the Topaz for the Mexican market.

"The product line we have in Mexico is restricted quite heavily by government regulations," he said. "We have judged that our products best meet the needs of our traditional customers."

Ogden: Last summer's strike at Cuautitlan, which halted production for 100 days cost, the company 15,000 vehicles

During a separate function, Clint Lauer, Ford's corporate vice president, purchasing and supply, discussed the quality of parts produced by suppliers in Mexico.

"We have seen significant improvement in the quality of parts supplied by Mexican companies. In the past 30 months quality has improved by almost 58 percent," he said.

Direct sales by Mexican parts suppliers to the United States and Canada increased by about 50 percent in 1987 over the previous year, he said. He did not give a sales figure.

Assembly-export deal for Europe eyed by Renault, Taiwan's Sanfu

By Stephen Vines
STAFF CORRESPONDENT

HONG KONG — Taiwanese auto manufacturer Sanfu Motors is planning a joint venture with Renault of France to export a new car to Europe. The car will be made from kits supplied by the French manufacturer and assembled in Taiwan.

In a telephone interview, Steve Wang, vice president of Sanfu's president's staff office, said the project was "not finalized." However, he said he expected some concrete proposals by the middle of the year.

Wang said the company was inclined to look at a new model for the project, as opposed to the Renault 9, 11 and 21 models that it currently assembles under license. Despite the short timetable for reaching a decision on the project, Wang said no agreement had been reached on which model would be the subject of the joint venture. He said, however, that there was an understanding that it would be sold throughout the European market.

If Sanfu does export to Europe, it will be the first of Taiwan's manufacturers to do so.

Taiwanese law stipulates that automobiles made in the country should have a minimum of 70 percent local content. Wang said that the new project might achieve higher levels of local components, although he said that all the main parts would continue to come from France.

Renault and Sanfu have had a technical assistance agreement since 1981. Sanfu has a separate agreement with Japan's Fuji Heavy Industries for van and truck production, and another with Isuzu that has enabled it to export the Isuzu Trooper II to the American market, though in small quantities.

Like most Taiwanese automakers, Sanfu concentrates on the home market, where it ranks a poor fourth in a field of seven.

Based in the Taichung region, Sanfu is now aiming to join other Taiwanese automotive companies that are taking their first steps in overseas markets.

Only the biggest of the companies, Yue Loong, is attempting exports with its Feeling 101 model.

Last year, Sanfu produced some 12,000 vehicles. This year, it aims for 15,000. Although output is modest, it is the largest of the companies not wholly tied to a Japanese manufacturer.

Seat prepares to export 13,000 cars to Taiwan

OSLO, Norway — Seat, the Spanish automaker, is planning to export cars to Taiwan. NOSAC, a Norwegian car-shipping company, will handle the shipments.

Seat is owned by Volkswagen. The transportation contract calls for shipment of 13,000 cars this year and 13,000 in 1989.

NOSAC also is transporting Ford models produced in Europe to several countries in the Far East. The three-year contract starts this year and includes 4,000 cars annually.

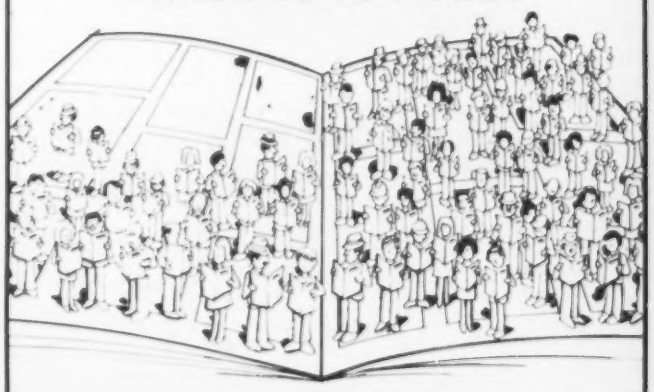
Why rely on word-of mouth when you can build a crowd in the back of Automotive News?



Auction advertising builds strong auction traffic.

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you get a big regional — or even national — attendance with an ad in the Auction Directory.

The Automotive News Auction Directory is a tried-and-proven tool for auctions looking to build attendance or promote a special function. That's what keeps our auction advertisers coming back for more. More results. When you want results . . .

Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

County charges chain dealer deceived buyers

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

Dennis Spencer and his Maryland dealerships — Astro Chevrolet and Metro Ford — have been sued by Montgomery County, Md., for alleged "deceptive and unconscionable trade practices" used to sell and lease motor vehicles.

This is the largest such lawsuit ever brought by the county to protect consumers. County Executive Sidney Kramer sought and received approval from the county council to hire — for the first time — special outside legal services.

The attorney now in charge, Alan R. Malasky of the Washington firm of Arent, Fox, Kintner, Plotkin and Kahn (no relation to the author of this article), told Automotive News the county is prepared to commit major resources and see the case through as an example to other merchants against consumer fraud and sharp business practices.

Glenn A. Mitchell, attorney for the defendants, said his clients have vigorously denied the allegations and and have asserted a number of affirmative defenses to the charges. He said he believes that when the evidence is considered, it will be demonstrated that there is no basis for the charges against his clients.

Mitchell said that although the trial is months away, the county held press conferences and contacted many satisfied customers of the dealerships in an effort to find support for its complaint. He said that kind of pre-trial activity is "most unfair" and should concern all dealers.

Spencer also owns S&R Chevrolet-Oldsmobile in Leesburg, Va.; Imperial Dodge-Chrysler in Warrenton, Va.; and M&M Pontiac in Springfield, Va.

The suit says Spencer operates Metro Ford and Astro Chevrolet in Silver Spring, Md., as a "single business entity" and regularly advertises jointly by radio and newspaper. The case, now in discovery, seeks civil penalties, punitive damages and restitution for an estimated 6,000 customers.

The complaint lists 13 charges investigated by the Montgomery County office of consumer affairs against Spencer and his Maryland dealerships. Allegations of unfair and deceptive practices include:

- Labeling certain packages of extra options and services as "dealer installed accessories" and charging $2,000 to $4,000 above the sticker price for items that were standard equipment already included in the sticker price, thus charging twice for the same items.
- Giving buyers the impression they had no choice but to buy certain optional equipment or features — floor mats, rustproofing and wheel locks — at non-negotiable prices.
- Telling customers a particular vehicle was new when it had been previously sold, used or was damaged. One Ford model, says the suit, had been sold three times, each time as new, although it had 1,200 miles for the second sale and 1,500 miles for the third sale. A Chevrolet was said to have 1,600 miles on it when sold as a "demo" or "test driven." Instead, the complaint charges, the car had been sold, used and returned.
- Failing to disclose charges for items not included in the base price.
- Failing to disclose "clearly and conspicuously" charges that were "additional dealer markup."
- Rejecting any liability for repairs, thus inhibiting consumers from asserting their warranty rights; and misrepresenting state law in order to persuade consumers to make unnecessary purchases of service contracts.
- Charging consumers "unconscionable prices for dealer-installed accessories and service contracts" — routinely selling floor mats for $195 although the manufacturer's suggested retail price ranged from $25 to $50 and selling one-year service contracts for $995 compared to their fair market value of about $300.
- Offering to sell 1987 models at "5 percent over official factory invoice" and 1986 models at "5 percent under official factory invoice" and claiming that "certified factory invoice prices" were posted on "every new car and truck" so "you will know how much you saved" and saying prices applied to "every car and truck in stock" and offering "instant financing" and "instant delivery" and adding that "factory options and dealer accessories you choose are additional" but failing on all those promises in several ways, including not having any such advertised vehicles in stock or available only with dealer-installed options that raised the price $2,000 or more.
- Falsely advertising that buyers would "get back in trade every dollar you paid for your car when new toward the purchase of any in-stock new '87 Chevrolets, Fords and Oldsmobiles" when Metro Ford, for example, would honor that claim only if the consumer paid some $5,500 above sticker.
- Falsely advertising that, for example, all 1987 Ford Escorts were on sale at $4,995 and there were "over 1,000 vehicles for delivery today" when consumers found no such such advertised vehicles for sale but instead found only vehicles with dealer-installed accessories that raised prices $2,000 to $4,000.
- Falsely advertising a "guaranteed minimum tow-it-in $2,000 trade allowance any car, any condition" and failing to come through unless the new vehicle was sold with extra options at higher prices.
- Falsely advertising 3.9 percent annual percentage rate financing and offering specific vehicles at specific prices — for example, "all our 1987 Ford Escorts $4,995 or $102 per month" — and then having consumers find the APR was 8.5 percent and that the total of the monthly payments did not add to the advertised price of the vehicle.
- Failing to disclose clearly and conspicuously the total payments under the advertised lease-purchase plan, thus leading consumers to believe falsely that the payments totaled to the advertised vehicle price.

The Montgomery Circuit Court is being asked to enjoin Spencer and his dealerships from engaging in deceptive and "unconscionable" trade practices in the future.

The county is also seeking punitive damages to be awarded to consumers, restitution and return of all money to each injured consumer, civil penalties of $500 for each violation of the county code for each defendant and investigative costs paid to the Office of Consumer Affairs.

Auto sales rise 12% for domestics

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Retail deliveries of domestic cars in the United States climbed almost 12 percent in the middle 10 days of February.

Cash-back deals and dealer incentives apparently contributed to the gain.

Industry sales in the period rose 11.87 percent to 210,316 units, compared with 188,001 a year earlier.

Some market analysts have been forecasting a slowing of deliveries in the wake of exceptionally strong sales in January and early February. Even so, most makers have scheduled production increases via overtime, added shifts and, in the case of General Motors, put plants back on stream after shutdowns caused by high inventories.

Toyota reported mid-February sales of 1,178 U.S.-built units, up 72.22 percent from 684 a year earlier.

Chrysler Motors dealers sold 21.66 percent more domestic cars, in mid-February than they did a year ago, and General Motors dealers boosted deliveries 16.30 percent. Ford Motor Co. reported domestic-car sales up 2.23 percent from the year-earlier level.

Volkswagen reported a 10-day sales decline of 23.85 percent. Nissan's U.S.-built car sales dipped 10.72 percent, and Honda's were off 4.54 percent.

Mazda, which began U.S. production in September, sold 569 cars in mid-February.

At GM, sales increases were reported by Buick, Chevrolet and Pontiac. Pontiac Grand Prix sales shot up 350.9 percent over last year's, and Buick Regal sales climbed 187.0 percent. Oldsmobile Cutlass Supreme, the third of the new GM10 cars, went on sale Feb. 18.

Diamond-Star given trade-zone status

WASHINGTON — The U.S. Commerce Department has extended foreign trade zone status to Diamond-Star Motors Corp.'s plant in Normal, Ill.

Illinois Gov. James Thompson said the move increases Illinois' competitive edge.

"Foreign trade zone status ensures that companies like Diamond-Star can access state-of-the-art technology and produce high-quality products, providing jobs for American workers," he said.

Jay Hedges, director of the state Department of Commerce and Community Affairs, said foreign trade zones offer several benefits including relaxed customs regulations and lower tariffs to companies located within them.

Diamond-Star is a joint venture of Chrysler Motors and Mitsubishi Motors Corp. The plant is expected to begin production in the fall.

GM plans 175,000 output boost

Framingham plant to reopen; 3 others to add second shifts

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors will increase North American production of cars, trucks and vans by about 175,000 units through the end of the 1988 calendar year, about 5 percent above current levels.

Production will be boosted by resuming a shift at an idled assembly plant, adding second shifts at three other car plants in the United States and Canada, and increasing overtime at one car plant and two truck plants.

GM's car production will be increased by 130,000 units through the end of the calendar year, while truck production will be bumped up 45,000 units.

Despite the production hike, GM's production continues to be off about 30 percent from its year-ago volume. Lower car production has accounted for the drop. GM's truck production this year has matched year-ago levels.

Domestic car production is off about 25 percent for the calendar year, while total domestic truck production is up about 8 percent.

GM also said last week it will idle for two weeks the Leeds, Mo., plant, which will close permanently later this spring, and idle its Oklahoma City plant for one week. Both plants were closed for inventory adjustment and will resume operation March 7. Leeds builds the Buick Skyhawk, Oldsmobile Firenza and Chevrolet Cavalier. Oklahoma City produces the Buick Century and Chevrolet Celebrity.

GM President Robert C. Stempel said the production increases are due to strengthening demand for GM vehicles and reflect "the ongoing product quality improvements resulting from plant modernization and employee involvement programs" as well as aggressive incentive programs.

GM's car assembly plant in Framingham, Mass., will resume production on one shift May 9, recalling 2,000 hourly and salaried employees. About 1,700 workers remain on layoff. The Framingham assembly plant was indefinitely idled Nov. 30. The plant builds Oldsmobile Cutlass Ciera and Chevrolet Celebrity models.

Cutlass Ciera inventory stood at 48 days on Feb. 1, well below the 60- to 65-day norm, and particularly low since the industry is heading into the spring selling season. Sales of 1988 Ciera models through Feb. 20 were off 20 percent for the model year but have been improving in recent sales periods.

Chevrolet Celebrity inventory was 96 days on Feb. 1, but sales have been declining. Celebrity sales for the model year were off 21 percent as of Feb. 20.

The second shift at GM's assembly plant in Lansing, Mich., will resume work April 11. The plant's two shifts, which comprise 4,350 workers, has been working on a rotating work schedule. The plant builds Oldsmobile Calais and Buick Skylark models. Calais inventory was 48 days on Feb. 1 and sales have been improving in recent periods, matching year-ago levels.

Skylark had a 114-day supply Feb. 1. However, Buick General Manager Edward H. Mertz said January sales of the Skylark were 134 percent higher than forecasted and early February sales were about 50 percent higher than predicted for the full month.

GM's assembly plant in Van Nuys, Calif., will resume its second shift March 14. The plant's two shifts had been operating under a rotating work schedule.

The plant is the sole source of Pontiac Firebird and Chevrolet Camaro models. The Pontiac and Chevrolet divisions apparently are optimistic about strong spring sales for the sporty cars. High inventories and slumping sales continue for both models, though.

As of Feb. 1, GM had a 116-day supply of Firebirds and a 166-day supply of Camaro models. However, aggressive incentives that kicked in during February have helped reduce Camaro and Firebird supplies. Chevrolet extended through April 30 its $750 rebate on Camaro models in 48 states and $1,000 rebate in California and Hawaii.

In addition, Chevrolet is optimistic about the nationwide launch of the Camaro RS, set for April 1. The RS was test-marketed successfully in California, Florida and Texas. It has the look of the IROC series, including spoilers, fascia and interior trim, but retains the V-6 engine of the base Camaro.

The Oshawa, Ontario, plant had been operating under a work schedule that was similar to that in Lansing and Van Nuys. A second shift will resume work March 21. The second shift is being added because of increased demand for Oldsmobile Ciera and Pontiac 6000. Pontiac 6000 inventory was 51 days on Feb. 1, though sales continue to be off almost 30 percent from year-ago levels.

The Oshawa plant is scheduled to be closed later this year for conversion to production of the Chevrolet GM10 model, a car that will be introduced as a 1990 model.

About 4,700 units have been added to the schedule through June at the Detroit-Hamtramck plant. No jobs will be added; production will be increased by use of overtime, which began last weekend.

The production increase is due mainly to stronger Eldorado sales, a model that was restyled, lengthened and equipped with a larger V-8 engine for 1988. Approximately 4,000 units of the increase will be for Eldorado and the remaining portion for Seville. Eldorado sales for the first 10 days of February were up 32 percent over year-ago levels.

Overtime is scheduled at the Baltimore truck plant, which produces Chevrolet Astro and GMC Safari minivans, and the Moraine, Ohio, truck plant, which produces Chevrolet S-10 and GMC S-15 models.

PRODUCTION

Car output declines 6% to 125,754

By Kathy Barboglio
AUTOMOTIVE NEWS STAFF REPORTER

United States auto production last week dipped 6.37 percent to 125,754 units from the prior week's 134,306 and dropped 27.71 percent from the year-ago week's 173,965.

Last week's targeted domestic auto output was shared as follows: General Motors, 41.86 percent; Ford Motor Co., 30.61 percent; Chrysler Motors, 14.95 percent; Honda of America Manufacturing Inc., 6.33 percent; New United Motor Manufacturing Inc., 2.58 percent; Volkswagen of America, 1.59 percent; Nissan Motor Manufacturing Co. U.S.A., 1.07 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 1.01 percent.

Last week's scheduled domestic truck production totaled 85,714, 1.10 percent below the previous week's 86,670 but 7.74 percent above the year-ago week's 79,560.

Year-to-date, 667,667 trucks have been built, 7.75 percent more than the 619,618 assembled last year at this point.

GM announced it will reopen its Framingham, Mass., car plant on May 9, recalling about 2,000 hourly workers on one shift. The plant was closed last November because of slow sales of Chevrolet Celebrity and Oldsmobile Cutlass Ciera.

Also, GM announced it will resume the second shift at its Van Nuys, Calif., plant, March 14, recalling about 1,900 workers. The second shift was dropped Feb. 15.

GM is boosting production of Cadillac Eldorado and Seville models at its Detroit-Hamtramck plant. Workers will build an additional 4,000 Eldorados and 700 Sevilles by June 1.

The second shift at GM's Lansing, Mich., car plant, which produces the Oldsmobile Calais and Buick Skylark, will resume April 11. The shift was dropped Jan. 11 due to slow sales.

On the same note, GM closed its Leeds, Mo., and Willow Run, Mich., plants for inventory adjustment last week. Willow Run is slated to reopen today and Leeds is scheduled to return March 7.

GM also shut down its Oklahoma City plant today for one week for inventory adjustment.

Ford's Wayne, Mich., plant remains idle for model changeover to the 1988½ Escort.

Chrysler's Jeep Grand Wagoneer line at Toledo, Ohio, was idle last week for inventory adjustment.

Cars, trucks slip in Canada

Last week's targeted Canadian auto production totaled 20,800 units, 8.72 percent below the previous week's 22,786 but 22.27 percent more than the year-ago week's 17,012.

Truck output was scheduled at 19,625 last week, 2.17 percent below the prior week's 20,061 but 11.16 percent more than the year-ago week's 17,655.

GM will resume the second shift at its Oshawa, Ontario, plant on March 21. The second shift was dropped last November because of slow sales of Oldsmobile Cutlass Ciera and Pontiac 6000 models.

Geneva: Europe eyes free borders

Domestics gird for '92 import rush

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

GENEVA — It was the 1988 International Motor Show last week in Geneva, but much of the focus was on 1992.

That's when Europe is scheduled to open its internal borders to unrestricted trade, a major consequence of which will be increased competition from Far East carmakers as various national restraints are lifted.

European automakers are girding for that day, both with new cars like Volkswagen's show-stealing second-generation Passat, which debuted here last week, and new strategies.

General Motors' mission to reduce its high European cost base was a major topic during the show as GM talked up its big 1987 profit in Europe and showed glimpses of an important new product.

Geneva also showcased the Soviet Union's vision of the automotive future. What could have been a star attention-getter at the show all but escaped notice because it didn't arrive until Thursday — after most of the world media had departed.

The seven-passenger Ochta concept vehicle from the Russian automaker Lada made its world premier, albeit late, in Geneva. The sleek, aerodynamic five-door was unlike anything the Soviet Union ever has shown before, either internally or to the world.

The Japanese last week continued their process of gearing up for the high-stakes future in Europe. It was the third straight major European show at which a Japanese maker premiered an all-new car. This time, it was the Toyota Carina II that is aimed directly at the Passat segment in Europe.

Toyota unveiled the Carina II, above, competition for the Volkswagen Passat, which was the star of the Geneva auto show. Increasing competition for Europe's market from makers in Japan and other Asian nations became apparent at the international gathering. Right, Ford's Ghia studio showed an aerodynamic 4wd multipurpose vehicle called the Ghia Saguaro.

COLLIN CUNNOOD PHOTOS

The limelight at Geneva last week belonged to GM-Europe President John Smith. He basked in record European profits and previewed GM's own forthcoming Passat competitor and also spoke out on pan-European trade issues.

While GM supports the coming unification of the European market, Smith warned that a truly unrestricted market could also benefit importers from non-European countries.

"Any Japanese measures to protect their domestic market are roadblocks to a free trade policy, causing some manufacturers to feel that progress in this respect has to be made before gradually easing import controls in Europe," Smith said.

Just two days before the world auto industry gathered here, the European Community's top trade official, Willy De Clercq, said the organization wants to strike a "transitional" agreement with Japan to restrict imports to around 10 percent of the European Community, giving the European industry time to prepare for 1992.

Last year, 1,180,000 Japanese cars were sold in the European Community, about 11 percent of the total. In contrast, carmakers from the European Community sold 87,000 cars in Japan in 1987.

Besides the Japanese question, Smith said it is even more difficult to determine a clear strategy with regard to future imports into Europe from new car-producing countries such as Korea and Taiwan.

"It raises the question as to whether free market and free trade principles can simply be adhered to, while risking what has been established over generations at extremely high investments," Smith said.

While Passat drew the biggest

Mazda to share Bronco II 4-door

By David Versical
and Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTERS

Ford Motor Co. plans to share production of its new four-door Bronco II in a move that would see the sport-utility sold with Mazda badges through U.S. Mazda dealers.

Sources close to both companies said the four-door Bronco II will be sold through both franchises in the 1990 model year. The vehicle, which bears Ford's UN46 code name, will be built at Ford's assembly plant in Louisville, Ky., sources said.

Aside from a common shell, though, it is not clear how similar the two entries will be. Mazda currently supplies a five-speed manual transmission for the Bronco II. Additional Mazda components are expected to appear in the new model.

The setup appears to echo an arrangement between the two automakers at Mazda's U.S. assembly plant in Flat Rock, Mich. That operation builds the Ford Probe along with the Mazda MX-6. Though the Probe and MX-6 share the same platform and powertrain, they sport different interiors and sheet metal.

The addition of the Bronco II under a Mazda name will please Mazda dealers, who don't have a sport-utility in their lineup. Some Ford dealers, on the other hand, have said they are puzzled.

"They can barely build enough Bronco IIs to meet the demand from the Ford dealers," said one.

Peak turnout for SAE

Stempel calls for a decade of innovation

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Record attendance, heavy participation from abroad and a parade of emerging technology highlighted the 1988 SAE Show in Cobo Hall here.

In his keynote address at the SAE banquet Thursday, General Motors President Robert C. Stempel said the auto industry will be a great place in the next decade for imaginative and innovative engineers.

He listed a host of new features, new materials and new manufacturing techniques that are ready to be adapted to tomorrow's vehicles — new technologies like active suspension, anti-lock brakes and electronics that turn the focus back on product.

The challenges, he said, will include development of alternative fuels and powerplants and continuing improvements in safety.

The news of Pontiac Fiero's demise met with some dismay among the estimated 37,500 at the show, of course. Several said Fiero had scored a lasting victory for plastic.

Acustar snafu highlights labor woe at Chrysler

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Corp.'s decision to abort any sale of its Acustar component-making subsidiary in the face of UAW pressure is the latest in a series of costly company run-ins with its unions.

Chrysler, which until recently has enjoyed a chiefly favorable public image, has been beset in recent months with labor difficulties that have cost the company millions of dollars and eroded its reputation.

Saturn may replace Fiero for GM

Long sales slump, changing tastes kill Pontiac's 2-seater

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC, Mich. — General Motors will fill the void left by the Pontiac Fiero with existing Pontiac models and, eventually, Saturn cars.

The automaker said last week that it will end production of its sporty, mid-engine Fiero by the end of this model year and idle the plant here that has assembled the cars for nearly five years.

GM executives cited sagging sales due to increased competition in the shrinking two-seater segment and consumer preference for larger, roomier cars as factors in their decision.

Pontiac General Manager J. Michael Losh said the division has no plans for a direct replacement for the two-seat Fiero. Rather, he said, Sunbird, LeMans, Grand Am and Firebird are expected to fill the gap. Asked if GM will re-enter the low-priced, two-seater market, GM President Robert C. Stempel said: "If you look at the role of the Saturn franchise and the stated mission of Saturn, it clearly is a car that's going to be in the value end of the market, and we've indicated there's going to be more than one model in that car line."

Initially, Saturn will be offered as a sporty coupe and a sedan.

The Fiero was an instant sales success when introduced in September 1983. In its first full model year on the market, Fiero sales totaled 93,485 units, well above the goal of 80,000 to 85,000. Then the slide began. Sales in the 1987 model year dropped to 41,830 units and were expected to continue their downward spiral to 30,000 in the 1988 model year.

Production at the plant was cut repeatedly, and in February, it dropped to 15 cars an hour on one shift. The plant today employs 1,109, with 1,241 on indefinite layoff. Peak employment totaled 2,500 workers on two shifts in 1986.

Stempel said GM considered killing the Fiero a year ago but it was given a reprieve. Losh said the decision, which he described as a difficult one, was based upon "economic and market realities" in the two-seater segment.

Losh, as well as Pontiac dealers, said people who previously would have been candidates to purchase the Fiero seemed to be opting for larger cars, like Pontiac's Grand Am. In addition, Losh and dealers cited skyrocketing insurance rates as a contributing factor.

They acknowledged also that the mechanical shortcomings of Fiero's early years, including the underpowered four-cylinder engine and lack of power steering, were factors in its demise. The recent recall of 1984 Fieros for engine fires didn't help either, dealers said, but by then sales were already on the skids.

Nevertheless, Losh said — and dealers agreed — the Fiero more than fulfilled its mission for the division.

"The Fiero played a major role, far in excess of the impact of its limited sales, in the redirection and resurgence of Pontiac." Losh said. "There is no doubt we'll miss Fiero. But today we're a far stronger, more resilient, more competitive car company than we were in September 1983."

When the car was born, the division's sales were dismal; the division was floundering, looking for an image. Fiero became the embodiment of Pontiac's newly established youth-oriented, "excitement" image, which continues today.

Paul Holloway, owner of a dealership in Exeter, N.H., recalled his showroom being packed with traffic the night before the Fiero's official introduction.

"It was exciting," Holloway said. "There hasn't been a model introduction that exciting the last 10 years."

The car itself and the manufacturing methods employed in its construction were considered revolu-

Suzuki stands tough on rollover charges

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Suzuki's aggressive stance in disputing allegations that its vehicles are prone to rollovers fits the company's image as an automotive upstart.

Rather than taking a low profile when bad news breaks, Suzuki of America Automotive Corp. speaks out strongly when its interests are at stake, such as last week in response to a NBC News report dealing with rollover accidents involving its Samurai.

Last month, the importer disputed a letter from Rep. John Dingell, D-Mich., that accused the company of evading quotas by importing its vehicles as trucks.

"We've taken a very aggressive stance on the Samurai from the beginning," N. Douglas Mazza, vice president and general manager of Suzuki's U.S. company, told Automotive News.

"We created a dealer network for the one vehicle and we're a lot more aggressive from a marketing standpoint than perhaps another management team would be."

The Brea, Calif.-based importer of the popular sport-utility vehicle last week went on the offensive following a three-part NBC News report involving rollovers and a petition from the Center for Auto Safety calling for a NHTSA investigation and recall.

An NHTSA spokesman said it is considering the petition but has no investigation under way nor any rollover complaints on record.

The Center for Auto Safety said it had reports of 15 accidents: 11 rollover accidents involving the current Suzuki Samurai, designated model SJ413, and four accidents involving a similar Suzuki model, designated as SJ410.

According to the center, eight injuries and three deaths are tied to the SJ413 model, and three injuries and one death to the SJ410.

NBC, using NHTSA data, reported 25 fatalities for both models.

Mazza said the company only imports the SJ413, and that the SJ410 is an older model, sold in other countries and Hawaii.

"The SJ413 is not the same vehicle (as the SJ410)," Mazza said, noting engineering changes made for the U.S. version.

Suzuki said that SJ410 models were most likely brought to the United States from Puerto Rico and Hawaii by independent importers. When Suzuki launched the Samurai in 1986 it also initiated legal action to bar dealers from selling the SJ410 under the company's name.

The NBC report repeated the center's charges and alleged that the vehicle is likely to tip over either in normal turns or accident-avoidance maneuvers.

Unlike Audi, which allowed reports of sudden acceleration to blossom into a major crisis, Suzuki immediately went on the offensive, sending out a press release disputing the NBC report before it aired.

The company also aired a new commercial last week citing several auto enthusiast publications' praise of Samurai's stability and handling characteristics.

"We are prepared to stay with this advertising for about two to three weeks," Mazza said, adding that "we are measuring the response to the ad on a weekly basis."

Suzuki has sold 140,000 Samurais since their debut two years ago.

In its press release, Suzuki asserted that the center's petition and the subsequent NBC report "may have been instigated in part by trial lawyers seeking to foster public opinion against Suzuki and perhaps the entire sport-utility market."

The company further charged that it has been singled out because "the Samurai is the leading imported sport-utility vehicle from Japan and has gained tremendous media attention due to its unique styling, reliability and affordable price."

Citing the U.S. Customs Service reclassification proceedings in light of the company's current woes, Mazza believes the company is being singled out on several fronts. He said it is "not coincidental that these things are happening to us."

Suzuki took issue with the NBC report, which used footage of a professional driver tipping the vehicle, saying the driver's maneuvers are "no way indicative of normal driver reactions."

The company disputes NBC's use of fatal accident reporting system data (FARS) from NHTSA that showed 25 fatalities in Samurai-related accidents to conclude that the vehicle is unsafe.

"We stand by our story completely," said Steve Handelsman, national correspondent for the NBC Television Stations' News Unit, which prepared the report.

"New evidence since the broadcast has served only to bolster our contention that the Samurai has a rollover problem."

According to Mazza, more than half of the incidents involved drunk drivers, 60 percent weren't wearing seat belts, and the incidents include one pedestrian struck by a Samurai, four persons who were killed in other vehicles involved in accidents with the Suzuki and four persons in a Samurai that was struck by a train.

In a letter to NBC-owned-and-operated stations airing the report, Mazza demanded equal time to present Suzuki's case.

Samuel Cole, a member of the Center for Auto Safety's vehicle safety staff, said "We're not disputing the fact that alcohol was involved in these accidents. We're disputing how the vehicle performs in an accident."

Chrysler still may have too many plants

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chrysler Corp. Chairman Lee Iacocca apparently believes the company still has excess production capacity following the announced closing of its Kenosha, Wis., assembly and stamping plants.

Speaking at a February press conference held in connection with the Kenosha closing, Iacocca said the company acquired four assembly plants with its purchase of American Motors in August but has business for only two of those plants.

"We have too much capacity," Iacocca said. "The whole country does. We didn't until the time we bought AMC. We bought four plants but we really only have business for two."

Iacocca's comments appear to represent a change in the chairman's evaluation of Chrysler's production capacity.

In October, he said the company "could do without a plant or a plant-and-a-half" because of its acquisition of AMC.

Since that time, the company has announced it will close its Kenosha assembly plant at the end of the 1988 model year.

Asked if Iacocca's remarks mean that Chrysler is studying an additional plant closing, a company spokesman said, "Obviously, everyone in this industry is studying their plant capacity. Everybody is studying it. You have to. The market is changing and there is excess capacity."

The company spokesman said, however, that Chrysler Motors Chairman Gerald Greenwald has maintained that there will be no additional plant closings in 1988 at Chrysler.

When it purchased AMC, Chrysler acquired the Kenosha assembly plant, a Jeep assembly plant in Toledo, Ohio, and two Canadian assembly plants, one each in Brampton and Bramalea, Ontario.

Analysts have suggested that the Brampton plant may be vulnerable.

Chrysler has since signed a five-year labor agreement with the UAW at the Toledo plant that assures production through September 1992.

The Bramalea plant produces the Eagle Premier sedan and the state-of-the-art facility was among the reasons cited by Chrysler for the AMC acquisition.

Wetherby's Safari conversion features comforts of home in a luxury package

Ex-Tra Tech exec starts conversion firm in Texas

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The RV industry is full of former employees of companies who branched out on their own.

In January, Phil Wetherby, a former Tra Tech official, followed industry tradition by launching Wetherby Conversions in Mansfield, Texas.

Wetherby's goal is to service customers within a 500-mile radius of Dallas/Fort Worth with a full line of conversion products, ranging from cars, vans and sport utilities to imported and domestic pickups up to one-ton duallies.

Wetherby, former vice president of Tra Tech Manufacturing and president of Tra Tech West, said he currently has about 100 franchised dealers.

He expects to have between 100 and 200 dealers by the end of the model year with the eventual goal of each dealer selling two to three vehicles a month.

That would put his company in the 4,000- to 5,000-unit-a-year sales volume range.

Wetherby doesn't have a consignment pool agreement with any Detroit manufacturer.

Typically, such agreements reduce a converter's operating costs because he doesn't have to invest his money in floorplanning or interest finance costs.

Essentially, pool vehicles are owned by GM, Ford or Chrysler until they physically leave the converter's lot and are sold to the dealer. Thereupon, the Detroit manufacturer collects from the dealer for the van chassis and the converter collects for his conversion package.

Wetherby is using a drop-shipment program, common in the industry, for vehicles he works on. Essentially, with drop shipments dealers pick up the costs of floorplanning the unit.

Basically, his strategy is to "allow the dealer to order the chassis he needs. If he wants a lower-priced or higher-priced unit or one with a diesel engine," he can specify his exact needs, Wetherby said.

Basically, the wholesale delivered price range of his conversion packages range from $3,900 to $6,500, Wetherby said.

Quality, backed by a strong warranty, geared as closely to that of the truck manufacturers, is another focal point.

Wetherby's warranty on the basic conversion is 12 months/12,000 miles. That includes mechanical parts on such items as seats, sofa beds, etc.

For add-ons like fiberglass running boards, trim on trucks and ground effects on cars the basic warranty is 36 months/36,000 miles.

He said his company is using the best equipment and materials available from brand-name suppliers.

Consumer demands for family transportation have grown and changed since the early 1970s, he said.

Dependable transportation is still a priority. However, as Americans find themselves to a greater extent on the road — commuting longer distances to work and play in increasingly heavy traffic, enjoying extended family vacations and retirement leisure travel — they want their cars and trucks to be as comfortable and convenient as possible.

With a wide selection of luxury appointments and sophisticated electronic and stereo equipment available, consumers today want to customize their vehicles to their lifestyles.

Factory tips for van converters

Chevy stresses price-value link; Chrysler mails quality guides

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chevrolet would like to see more van converters communicate the price/value relationship of their products to consumers, and Chrysler recently stepped up communication with van converters to improve product quality.

Chrysler sent out a specially prepared van conversion guide to 1,300 converters in February, outlining recommended policies and procedures for handling its van products. It is Chrysler's first such mailing to RV firms since the days when it supplied motor home chassis to the industry.

Its guidebook discusses transportation claims, warranty repair, new-vehicle prep, safety mechanisms and other relevant converter issues.

James E. Lynch, Chrysler manager of special vehicles, said that in addition to an effort to upgrade quality and improve customer satisfaction, the mailings were part of what will be a continuing effort at better communication with non-consignment pool companies.

"We're trying to bring them into our wave length so they know our thoughts on what they can and cannot do to our vehicles," he said. "Many of our Dodge dealers are buying conversion-package chassis for non-consignment pool companies, so there is no real direct link for communicating quality and safety issues."

Lynch plans to continue corresponding with non-consignment pool converters.

A major section of Chrysler's booklet deals with electrical issues. This is one of the most prevalent problem areas in the industry because of the increasing number of electrically operated components that are being installed in vans, such as televisions, VCRs and elaborate stereo systems, Lynch said.

Meanwhile, Chevrolet's Jim Greene, assistant manager — special vehicles, would like to see more converters use a manufacturer's suggested retail price-type price/equipment sticker, which could be used to describe the quality of their carpets, seats, interiors and other features.

For example, consumers are generally not astute enough to differentiate the quality of the cloth or carpeting used by various manufacturers to determine how long they will last, he said.

"Converters can because they buy it. But certainly the average customer can't," Greene said.

Dealers are the big impediment to price-labeling conversion packages. Traditionally, they've been prone to high-gross those products.

"The challenge of the industry, as I see it, is to overcome (dealer resistance to MSRP stickers) and provide consumers with clearer price/value relationships," Greene said.

There also is a real feeling in America that smaller should be cheaper or less expensive, he said. It has led many converters to limit their price and equipment packages for Astro.

"I've been trying to say to the industry that the Astro needs to grow out of the philosophy that smaller should be less expensive, that the Astro just happens to be of a size that is more appealing to a certain segment — the yuppie, female-influenced buyer. They still want the quality seats, the whistles and toys, the TVs and all those things that they're accustomed to if they ever owned a G-van," Greene said.

People buy Astros for features like garageability and handling ease rather than low price, he said.

Greene said that Chevrolet's LT package for a factory-upfitted Astro puts it into the $18,000-plus range, which is more expensive than conversion units done by most outside converters.

"The upfitter was afraid that when we introduced our conversion package for Astro, we would take some of his business," he said. "We haven't because we still can't build enough of that product to supply demand.

"So if a dealer has an $18,000 Astro with our seats sitting on his lot, he can easily move a customer from that to an Astro" upfitted by an outside converter, Greene said.

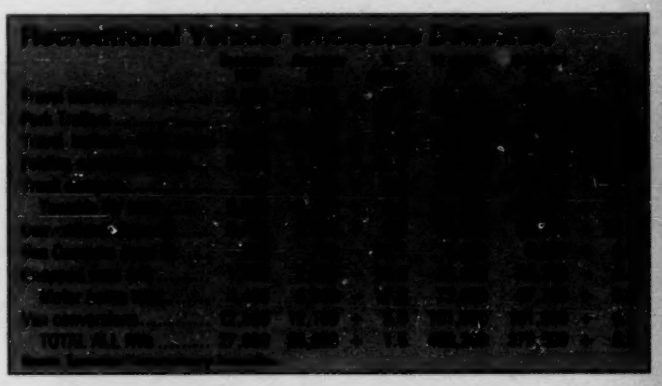
RV-maker sales reach 400,200 in '87, up 5.5%

RESTON, Va. — RV manufacturers closed out calendar 1987 with their strongest performance in the past several years.

Manufacturers wholesaled 400,200 units last year, 5.45 percent more than in 1986 and 11.41 percent more than in 1985, according to the Recreation Vehicle Industry Association.

In December, the Index of Consumer Sentiment also rose as consumers appeared to have shaken off the fears that followed October's stock market crash, RVIA said.

While concerns persisted about the outlook for the domestic economy, the December survey confirmed that buying attitudes had improved in response to increased discounting and lower interest rates, RVIA said.



Buying attitudes for RVs remained near the all-time high set in March 1987.

A strong second half enabled van converters to ship 181,900 units in 1987, identical to 1986's performance.

December shipments of 12,800 vans were up 5.78 percent from a year earlier and were 8.10 percent ahead of November.

Detroit manufacturers shipped 212,500 vans without seats to converters in 1987, 20.53 percent more than the 176,300 shipped in 1986.

Included in the 1987 total were 170,400 full-sized seat-delete option vans, 18.67 percent more than the 143,600 shipped in 1986, and 42,100 compact vans, 28.75 percent more than the 32,700 shipped in 1986.

Starcraft's prospectus reveals purchase price, income

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Starcraft investors purchased the company from Lear Siegler last July for $75.8 million. The figure is included in a prospectus the company issued to sell $50 million in long-term notes.

This is the first time Starcraft's financial results have been revealed.

Company officials were successful in selling the notes to complete the final part of their financing effort. The notes are due in 1998.

The investors financed the purchase of the company by borrowing $73 million from Citicorp Industrial Credit Inc. and contributing another $8 million of their own.

The group, organized by Duncan Cook, includes members of Starcraft management, Duncan Cook and certain of its affiliates, Salomon Brothers Holding Co. Inc., Southwest Venture Partners and others.

For its fiscal year ended June 28, 1987, Starcraft had net income of $98 million and long-term debt of $72.7 million, including the $50 million in notes that were subsequently sold.

During the first six months of fiscal 1988, ended Dec. 31, 1987, the company had net sales of $66.7 million, up 16.1 percent over the year-earlier period, said Dominic Cuzzocrea, Starcraft president and chief executive officer.

The company's prospectus said Starcraft had net income of $10.6 million for the seven-month period ended Jan. 31, 1987.

The company had net income of $20.3 million for the 12-month period ended June 30, 1986, compared with $22.6 million for the same period a year earlier.

During the seven-month period ended Jan. 26, 1987, Starcraft had net customer sales of $65.5 million. The company's automotive products division accounted for $29.5 million of that figure; marine products division, $18.1 million; and recreational products division, $17.9 million.

During the same period, Starcraft had an operating income of $3.4 million — the automotive and marine products divisions showed a profit and the recreational products division suffered a loss.

The automotive division provided operating income of $3.9 million while the marine division had an operating income of $42,000. Recreational products lost $556,000.

All of the company's divisions were profitable for the 12-month period ended June 29, 1986. Net customer sales were $111.7 million and operating income was $10.3 million.

Starcraft had net sales of $115.8 million and operating income of $12.7 million for the 12-month period ended June 30, 1985.

For the 1988 fiscal year, company officials said the automotive division received a ship-through agreement from General Motors covering a new fiberglass cap and other conversion packages for the full-sized pickup truck. The agreement means there will be no duplicate freight charges for GM dealers.

Starcraft plans to introduce several new fifth-wheel travel-trailer models and some new automotive products in 1989.

Overcapacity: The 3rd hurdle

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The current 4-million-unit excess capacity in U.S. car and light-truck assembly plants will prompt the domestic industry to make extensive changes.

That overcapacity problem will not go away easily and will force the domestic automobile industry to make further operating adjustments, Harvard University Professor Malcolm S. Salter told a luncheon meeting of the Harvard Business School Club of Detroit.

Salter, faculty chairman of both the general management area and the International Senior Managers Program at the Harvard Graduate School of Business Administration, said that although the automobile industry is not unique in the number or type of challenges facing it, it is significant.

"It is a paradigm for the other global industries," Salter said, adding that the automobile industry also has high visibility.

Salter, who has influenced some of the industry's managers when they were in the classroom, said the industry is now in the third phase of its fight to regain global competitiveness.

He said the first phase was the 1980 to 1983 period following the second energy crisis when management worried about cutting costs and labor worried about job security, which led to an "immediate conflict."

The second phase was the 1983 to 1987 period of recovery. "Everybody did what they had to do," Salter said. "Everybody did what they were asked to do."

That meant management and labor developed labor agreements with new work rules, government dealt with the currency problem and suppliers cooperated with new logistical solutions.

"Even the Japanese did what they had to do," he said, citing the Voluntary Restraint Agreement and the increased investments in U.S. "transplant" operations.

The result was that in the period between 1980 and 1990, the U.S. automobile industry was able to develop 30 new platforms to improve competitiveness, Salter said.

The current third phase is marked by overcapacity, with only about 69 percent of North America's capacity being utilized. He put utilization, by segment, at: small, 57 percent; mid-sized, 77 percent; large, 69 percent; luxury, 55 percent; and sports, 50 percent.

The current situation will be exacerbated by more entries into the U.S. market — including China, Romania and Russia — with no planned market exits, he said.

Salter said he believes the current phase will be marked by the same factors that dominated the second phase, only intensified, leading to a "negotiated reconfiguration of the industry, a negotiated downsizing."

He said success will require more "pro-competitive" industry-labor and industry-government relationships.

Manufacturers will be faced with the need to unilaterally reduce capacity, he said, and the UAW will be forced to abandon industry-wide "pattern" agreements in favor of "company-specific labor relations."

Salter said government will have to "grease the wheels of change" by providing "adjustment assistance." He cited government-provided extended health care benefits as an example.

Quality, productivity, product diversity, cooperative agreements with suppliers, more joint ventures with competitors and "rapid response to consumer demand through accelerated new product cycles" will all be important factors in the current phase.

The third phase also will necessitate changes in the industry's managers. "Managers must learn to be as good politicians as they have been managers," he said.

"The new practices seem to be pro-competitive and just as important as new technology."

Salter said it will be "critical" for the industry to attract "really high potential young blood" for managers.

"The bankers are onboard, the consumers are onboard — I just want to make sure the young people are onboard," Salter said.

Smart quits Commerce in promotion dispute

WASHINGTON — Bruce Smart, the U.S. Commerce Department's undersecretary for international trade, has resigned following the withdrawal of his name as a candidate for Commerce deputy secretary.

Commerce Secretary C. William Verity had originally nominated Smart to the post, but withdrew that recommendation, citing a difference in management style. Smart presided over the auto parts-related Market Oriented — Sector Specific talks with Japan that attempted to open that market to U.S. suppliers.

U.S. model total lowest since '60

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

The demise of American Motors and trims by General Motors and Ford Motor Co. reduced the number of domestic passenger-car models to the lowest total in 28 years.

The annual Automotive News tabulation finds 251 U.S.-built 1988 models on the market, down from 300 in the 1987 season. The current count is the lowest since 1960, when the domestic makers had 244 models.

The 1988 total includes 28 transplant models — cars built in the United States by foreign manufacturers. Thus, the three U.S.-based automakers are offering 223 models this year.

This year's cuts dropped the domestics far behind the imports in number of models offered. The imports have 337 vs. the domestics' 251. The import-domestic total is 588 car models for 1988.

The death of AMC wiped 19 models off the books. Chrysler Corp. kept none of the Alliance and Eagle autos manufactured by AMC. It saved only the Premier (now the Eagle Premier), which wasn't on the market last year.

GM made the biggest chop; a net reduction of 24 models. The five GM car divisions now offer 127 models, down from 151 last year.

Most of GM's activity involved the J-cars. GM sliced 16 models from the lineups of Chevrolet Cavalier, Pontiac Sunbird, Buick Skyhawk and Oldsmobile Firenza. A further slash will be made later in the model year when Firenza and Cadillac Cimarron (also a J-car) are dropped.

The Chevrolet Chevette and Pontiac 1000 subcompacts also are missing from GM's 1988 stable. So are the Cadillac limousines.

Elsewhere at GM, the Chevrolet Monte Carlo was the most notable casualty. A 1988 Monte Carlo was introduced, but production ended last December. Monte Carlo had been in the Chevrolet lineup since the 1970 model year.

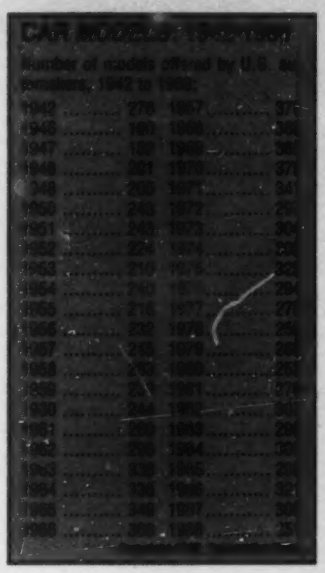
New for GM are the Buick Reatta and the front-wheel-drive GM10 cars — Buick Regal, Pontiac Grand Prix and Oldsmobile Cutlass Supreme. The GM10 cars did not increase the number of models offered; they simply replaced rwd cars of the same name that were dropped.

Ford Motor has 57 models for 1988, down from 69 a year ago. Five models disappeared when the Mercury Lynx was discontinued. Ford also erased the two-door models from the Ford Crown Victoria and Mercury Grand Marquis lines and dropped a Ford Taurus wagon and a pair of Ford Tempo two-doors.

Chrysler Motors offers 39 models for 1988, one less than in 1987. The Chrysler New Yorker, New Yorker Landau and Dodge Dynasty sedans are new and so are the Eagle Premier sedans and a LeBaron J Premium convertible.

The sporty Dodge Charger and Plymouth Turismo subcompacts were discontinued, and two models were pared from both the Dodge Aries and Plymouth Reliant lines. The Chrysler New Yorker Turbo was introduced for 1988, but production ended last fall.

The 28 transplant models counted in the domestic total consist of nine Volkswagens, seven Hondas, six Nissans, three Toyotas and three Mazdas. Mazda is a newcomer to U.S. assembly. Honda has one more U.S.-built model than it had last year, and VW has three more. VW will leave the transplant field when it closes its plant in Westmoreland, Pa., at the end of the 1988 model run.



By body styles, two-door models bore the brunt of this year's reductions. There now are 95 U.S.-built two-doors, compared with 127 last year. In this compilation, two-doors include hatchbacks, which some makers list as three-door models.

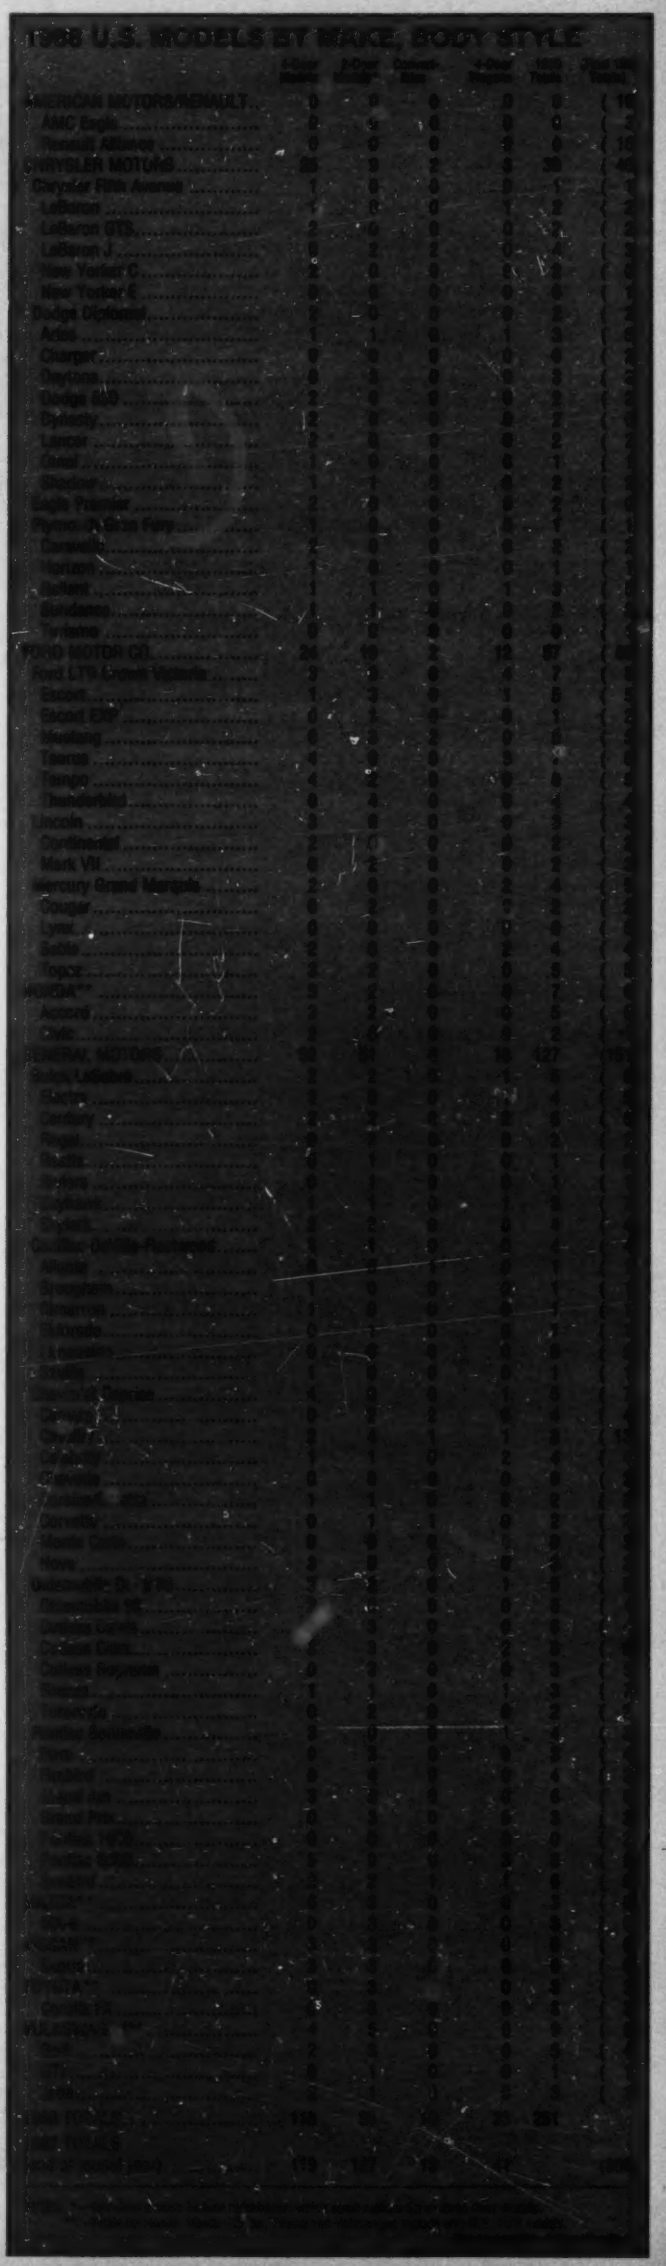
There are 113 four-door sedans, down from 119, and 10 domestic convertibles, three less than last year. Station wagons number 33, down from 41 last year.

Each of the five GM car divisions has fewer models for 1988 than for 1987. Chevrolet made the deepest trim, cutting 11 choices. Ford and Lincoln-Mercury divisions are down, and so are Dodge and Plymouth. Chrysler is the only Big 3 marque to show a year-to-year increase.

Ford, with 35, has the most models of any domestic make. Pontiac is second with 34, followed by Oldsmobile, 30; Chevrolet, 28; and Buick, 26.

In the 1987 model year, the top five were Ford, 40; Chevrolet, 39; Pontiac, 37; Oldsmobile, 33; and Buick, 31.

The Automotive News tabulation includes all models the manufacturers are pricing or merchandising individually. It does not include engine and transmission options. Vans and sport-utility vehicles are excluded from the passenger-car count.



Hearing today on UAW election

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

A court hearing on charges by the U.S. Secretary of Labor that the UAW committed fraud in a regional election will be held today in Detroit.

Meanwhile, the union's independent Public Review Board was slated Saturday to reconsider a decision it made on an issue similar to the one in the UAW Region 5 dispute. The common issue is the union's rule that a staff member take a 90-day leave of absence before running against an incumbent.

In the disputed election, incumbent Ken Worley defeated Jerry Tucker, former UAW staff member, by a fraction of a vote and retained his seat on the union's executive board.

The UAW fired Tucker for running against Worley without taking a 90-day leave. One of the three suits filed by the Labor Department charges the UAW with discharging a candidate prior to an election.

David Klein, executive director of the seven-member review board, said that the panel will reconsider its August decision against Gary Brandt, a UAW staff member who serves Cleveland-based Region 2. Brandt challenged the validity of the 90-day rule.

Klein said that the board will consider whether the rule was properly instituted by the union's executive board in accordance with the UAW constitution or whether it was adopted by an administration caucus.

The other two labor department suits charge that physical intimidation was used against Tucker supporters and that union money was used illegally to influence the Region 5 election.

HOLE-IN-ONE INSURANCE

The National Hole-In-One Association knows how to capture valuable exposure and awareness for your dealership! With hole-in-one prize insurance (premiums as low as $225) you can offer everything from a new car to up to one million dollars in cash! February deliveries rise 13.9%

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

New-car sales in the United States rose 13.95 percent in February. Sales volume continued to run counter to many expectations as it stayed on an upward trend for the month.

The industry total — domestic and imported cars — was 884,271 units, compared with 776,015 units in February last year.

Sales were spurred by widespread cash-back and low-cost financing deals for retail customers and by dealer incentives. There were 25 selling days in the month this year, one more than in February 1987 because of leap year.

Deliveries of domestic cars rose 16.54 percent to 649,059, compared with 556,953 a year earlier.

Deliveries of imported cars climbed 7.37 percent to 235,212 from 219,062 a year earlier.

The Big 3 all reported robust gains: Chrysler Motors had a 21.99 percent increase for the month; General Motors, 19.41 percent; and Ford Motor Co., 12.64 percent.

The transplants generally did not perform as well. Honda dealers delivered 0.89 percent fewer U.S.-built cars, and Nissan's deliveries of U.S.-built autos dropped 34.40 percent.

Volkswagen's sales were up 4.44 percent. Toyota's sales of cars built in this country were up 58.01 percent to 3,315 units, compared with 2,098 a year earlier.

Mazda, which began building cars here in September, sold 1,826 units for the month.

For GM, it was the best sales month since August. Claude N. Moore, vice president in charge of the GM customer sales and service staff, said the company is optimistic about the market for the spring selling season.

In the final selling period of the month — with seven selling days in both years — domestic-car sales climbed 24.10 percent.

The increases were widespread, but Nissan reported a sales decline of 44.16 percent.

GM's domestic sales rose 33.44 percent; Chrysler Motors, 18.76 percent; and Ford Motor Co., 18.75 percent.

VW had a gain of 19.21 percent for its U.S.-built cars, while Honda's sales increased 2.60 percent.

Toyota reported an increase of 34.75 percent. Mazda's retail deliveries of cars made in this country totaled 906 in the final 10-day selling period.

It was GM's best 10-day sales tally of the model year and the highest for the final February period since the record of 201,149 deliveries was set in 1972, the company said.

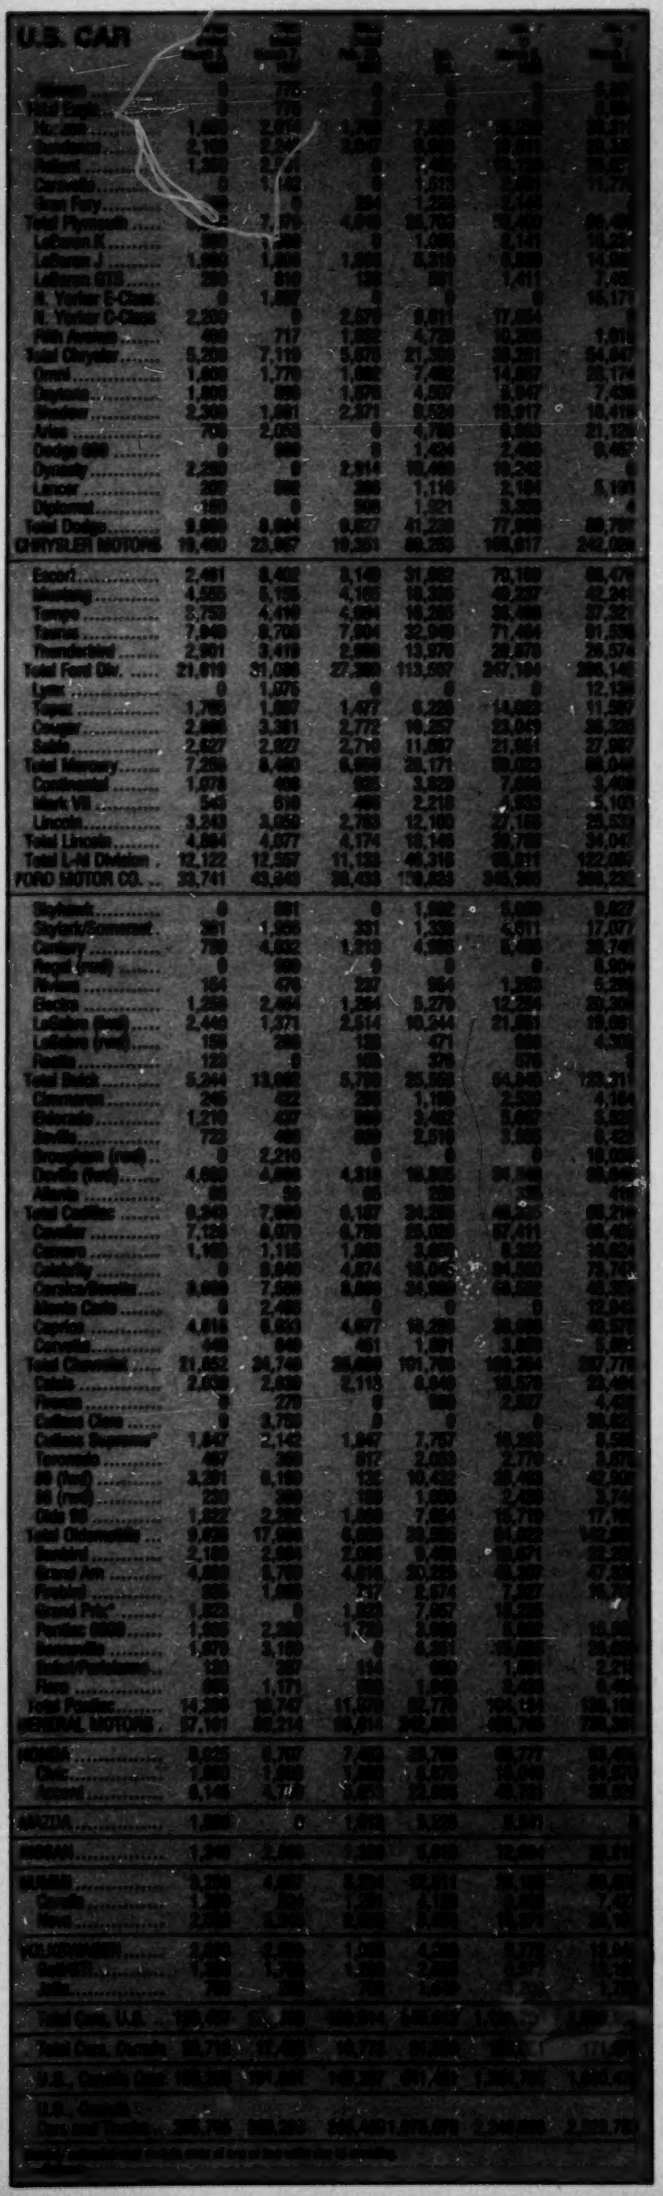
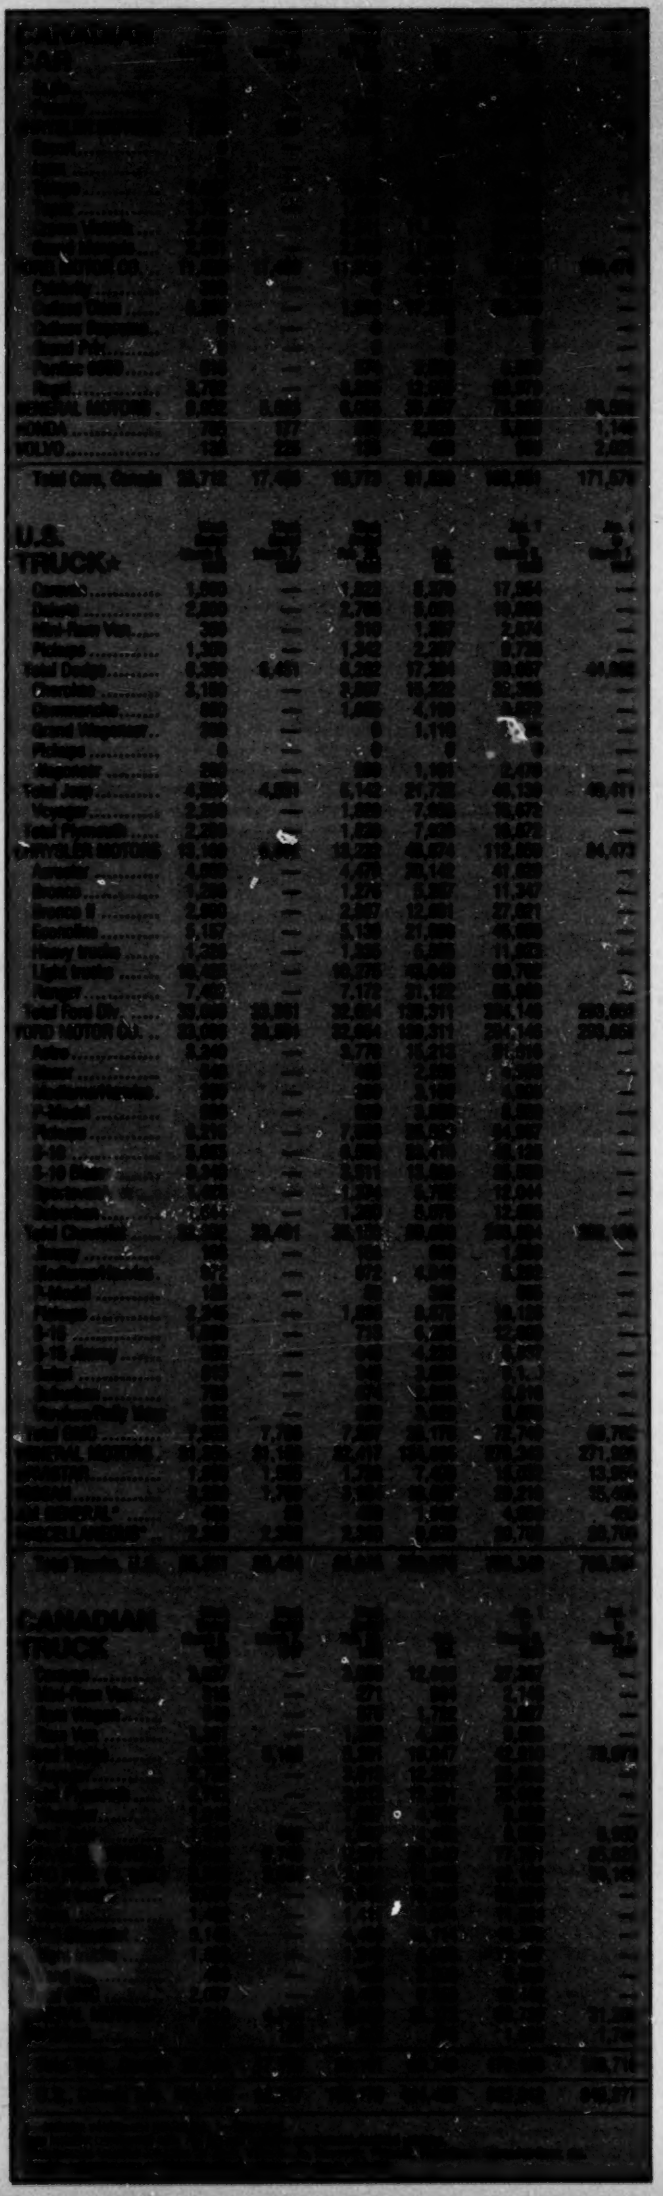
PRODUCTION





Year's build hits million, 3 weeks late

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers built their one-millionth car of the year last Monday, almost three weeks behind 1987.

So far this year, 1,126,700 units have been assembled, 25.33 percent below the 1,508,897 completed last year at this point.

Last week's targeted auto output of 126,497 was 2.33 percent below the prior week's 129,514 and 27.13 percent below the year-ago week's 173,596.

Companies split last week's scheduled production as follows: General Motors, 45.19 percent; Ford Motor Co., 26.67 percent; Chrysler Motors, 15.34 percent; Honda of America Manufacturing Inc., 6.34 percent; New United Motor Manufacturing Inc., 2.57 percent; Volkswagen of America, 1.58 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.25 percent; and Nissan Motor Manufacturing Co. U.S.A., 1.06 percent.

Truckmakers estimated last week's production at 85,351, slightly below (0.81 percent) the previous week's 86,045 but 6.13 percent more than the year-ago week's 80,424.

Year-to-date, 753,349 trucks have been built, 7.54 percent more than the 700,561 assembled last year at this point.

GM will discontinue production of the Fiero, built in Pontiac, Mich., at the end of the model year due to sluggish sales. About 1,100 workers will be affected by the closing of the plant in addition to the 1,241 that were laid off previously.

Production resumed today at GM's Leeds, Mo., and Oklahoma City plants. Both were idle to adjust inventories.

Chrysler's Jefferson Avenue plant in Detroit resumed output today. The plant was closed for inventory adjustment.

As reported earlier, Ford's Wayne, Mich., plant is idle for model changeover to the 1988½ Escort. The plant is expected to reopen March 14.

Overtime was scheduled last Saturday at GM's Detroit-Hamtramck plant.

Ford slated overtime last Saturday at its Wixom, Mich.; Kansas City, Mo.; and St. Louis plants.

All Ford car and truck plants except the Edison, N.J., facility are scheduled for daily overtime this week.

Canadian cars post 20% gain

Canadian automakers produced an estimated 23,712 cars last week, 19.92 percent more than the prior week's 19,773 and 35.61 percent more than the year-ago week's 17,485.

So far this year, 198,051 units have been assembled, 15.43 percent more than the 171,579 completed last year at this point.

Truck output was targeted at 20,145 last week, 14 units more than the previous week's 20,131.

Year-to-date, 170,563 trucks have been built, 14.69 percent more than the 148,716 assembled last year at this time.

U.S. deficit worsens in auto trade

1987 imbalance up 2% to $46 billion

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks increased 2.2 percent in 1987 to $46.0 billion.

U.S. Commerce Department figures analyzed by Automotive News show that the $1 billion increase over the 1986 deficit resulted primarily from large increases in passenger-car shipments from South Korea, Brazil and Mexico.

The deterioration occurred in spite of a surge of 8.3 percent in export activity by U.S. makers during the year and declines of 7.7 percent in Japanese car imports and 20.8 percent in Japanese truck imports.

Although the U.S. automotive export improvement is a positive development for the overall merchandise trade deficit of $153.0 billion (customs value) for 1987, exports of U.S. cars and trucks are starting from an extremely small base.

The United States exported 2,759 passenger vehicles to Japan in 1986 and increased that number to 4,721 in 1987.

However, Japan shipped 2,417,509 passenger cars to this country last year, down 7.7 percent from 1986. Truck imports from Japan totaled 772,758, down 20.8 percent from a year earlier.

The export drive by U.S. automakers was fueled by a 131.6 percent increase in passenger-car exports to countries other than Japan and Canada and a 70.8 percent increase in car exports to Japan.

Exports of cars to Canada fell

Ford and GE create a new giant; 'captive business' troubles rivals

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Credit's purchase of 20 percent of GE Capital Auto Auctions nearly 18 months ago has some industry officials raising their eyebrows and calling it "Ford's cradle to grave" program to sell and resell cars — making a little profit every step of the way.

General Motors and Chrysler Motors now contribute to Ford's profits by marketing their used vehicles through GE's network of 17 auctions, and neither has plans to withdraw their vehicles from GE.

But that doesn't mean they have to smile about it. Said a Chrysler spokesman, "We're not real happy about putting money into our competitor's pocket, but Chrysler has no plans currently to take our vehicles out of GE now that it's in bed with Ford. We are monitoring the level of service closely, but so far we are satisfied with GE."

And although GM and Chrysler officials add they are not shopping for auctions of their own, the Ford-GE handshake has stirred resentment in another quarter.

Leading independent auction owners and executives at competing auction chains claim that much of their business from Ford's and GE's huge lease fleets has been taken from them and transferred to

GM divisions seek increases in production

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — After two years of constant production cuts, General Motors will boost output for the second time in a month as the automaker heads into the spring selling season low on inventory of several models.

Some GM divisions will request increases in certain product lines at this month's scheduling meeting, and they expect their requests to be granted.

They are requesting production increases for Buick LeSabre, Electra, Skylark and Century; Pontiac Firebird, Bonneville, Grand Am and Sunbird; and Oldsmobile Calais, Cutlass Ciera and Delta 88.

Dealers say the unexpected sales surge of the past two months — which is continuing into March — coupled with production cutbacks in late 1987 and early this year have left them with too few cars as spring approaches.

GM's inventory fell to a 62-day supply on March 1, compared with an 84-day supply a month earlier. The five-year average for the industry for this time of year is 68 days. GM's sales at the end of February were up 21 percent for the calendar year.

Mark Herrmann of Mark Buick-GMC Truck, Yonkers, N.Y., said he has a 41-day supply of cars, about half of what he had at this time last year. Sales, meanwhile, have risen about 45 percent, and he said he is concerned about having too few cars for spring.

"It would be a shame to lose this momentum," Herrmann said. "If we don't have the loaf of bread on our shelf, the customer will go to another grocery store."

Late last month, GM announced production hikes for some lines. The corporation said it would boost North American production by about 175,000 cars and trucks, or about 5 percent from early 1988 levels, through the end of the 1988 calendar year.

The increases were accomplished by resuming one shift at an idled plant, adding a second shift at three car assembly plants and scheduling overtime at two truck plants. However, the production pace still lags behind last year's.

Pontiac General Manager J. Michael Losh said his division will ask for production increases for virtually every model. Pontiac's days' supply dropped to 51 on March 1 from 67 last month. Pontiac sales at the end of February were up 23 percent for the calendar year. Pontiac especially wants more Firebirds, Bonnevilles, Grand Ams and Sunbirds.

Losh said that even though Firebird sales have been off and inventories appear healthy, spring is the best selling season for the sporty model. In addition, Pontiac recently extended through April 30 rebates of up to $1,000 on some Firebirds. Pontiac also extended rebates on Bonneville, Fiero, Sunbird, Grand Am and 6000 and added LeMans to the list.

Losh said that the division will take every Grand Prix that GM's

Auto workers and drugs, drinks

Labor, management unite to treat growing problem

A 43-year-old auto worker with 15 years' seniority has kicked the alcohol-drug habit for the first six-month stretch since his teens. And he has saved his job at Ford Motor Co. in the process.

That troubled worker — one of thousands in the industry — had been fired for excessive absences. Referred for help to the innovative UAW-Ford Employee Assistance Plan, the worker, whose identity is confidential, told his therapist that he had been a beer drinker for years with no visible adverse effects. But as he neared 40, he began to experience hangovers, which caused him to miss work frequently.

The therapist said the worker told him he began snorting cocaine four years ago because "the guys told him the drug minimized hangovers."

Two years ago, the worker moved up to smoking something even stronger — crack cocaine. His absenteeism increased, he was suspended and ultimately fired.

Once in the assistance program, the worker — typical of many — was first hospitalized for 28 days and detoxified. He now receives therapy in his community, something that helped get him reinstated at Ford.

His therapist says the worker is "beginning to understand that his passive, dependent ways" contributed to his addiction.

New GM victory on X-cars fogs safety probes

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — An appellate court has given some 1.1 million 1980 General Motors X-cars a clean bill of health.

In upholding a lower court ruling made almost a year ago, the three-judge panel unanimously said the federal government had failed to meet its burden of proof showing a class-wide defect known as "premature rear wheel lockup."

The U.S. Court of Appeals for the District of Columbia Circuit ruled against the government on

Costs kill '88 Chrysler P-car ragtop

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors has canceled plans to introduce convertible versions of Dodge Shadow and Plymouth Sundance in the 1988 model year because of high conversion costs, but it is evaluating the feasibility of a 1989-model-year launch.

"That program has been put on hold because the costs got significantly out of line," said Charles B. Kitz, Chrysler Motors general marketing manager for Dodge cars. "We are re-evaluating it and looking at other ways to do it to bring the costs in line. We're a year away, probably."

Kitz said anticipated project costs tripled. Conversion of the subcompacts would have been handled by an outside supplier. —

ASC Inc., a major automotive converter in Southgate, Mich., had been working on development, a spokesman said.

Kitz said Chrysler is currently seeking ways to use an outside supplier along with additional company involvement in order to reduce costs.

"There are a lot of things you have to do structurally with a convertible, a lot of changes involved," Kitz said. "It gets very complicated with safety and rollover considerations."

Dodge discontinued the Dodge 600 convertible after the 1986 model year. Now, Chrysler Motors' only convertible is the LeBaron J.

Kitz also said Chrysler plans a January 1989 launch for the A-body Dodge Spirit and Plymouth Acclaim compacts, and that Dodge Aries and Plymouth Reliant, the company's K-car compacts, will be in the 1989 model year lineup.

"It's not in the immediate plan to drop the K-cars," he said. "The A-body is not a replacement for the K-car. It's a different kind of car."

He also said there are no plans for Dodge to carry a version of the coupe that will be produced by Diamond-Star Motors, the Chrysler-Mitsubishi venture.

Kitz also said he is more optimistic about 1988 sales than he was in January and that Dodge expects to sell 500,000 cars in the 1988 model year. The division sold 373,087 cars during the 1987 model year.

U.S. court rebuffs UAW; new regional vote ordered

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — In an unprecedented decision, a federal district judge ordered a new election for a powerful UAW regional directorship and a seat on the union's international executive board.

At a two-hour hearing, involving three U.S. Labor Department suits and a private suit, the judge said an earlier election in the eight-state region was tainted by fraud. The region covers Oklahoma, Colorado, Texas, Missouri, Kansas, Arkansas, Mississippi and Louisiana.

The judge said that his written ruling, to be issued in two weeks, will order a new election, based on evidence that the UAW had misused union funds to influence the election.

This will be the first rerun of a UAW election covering an area as large as a region and comes after the first legal election challenge to a sitting UAW executive officer.

The new election will once again pit Jerry Tucker, a dissident former staff aide to Kenneth Worley, against Worley, director of Region 5, the largest geographical region in the UAW.

It's not clear whether the race will involve other candidates.

Tucker ran against incumbent Worley in 1986 and lost by less than one vote. The fraction of a vote is possible in the UAW delegate election system.

If Tucker wins the new election, ordered by U.S. District Court Judge Richard Suhrheinrich, it will put a vocal dissident in a powerful place within the highest levels of the union.

Suhrheinrich made his decision following a hearing in Detroit on charges by the labor department that the UAW had committed fraud in the 1986 regional election, which took place at a UAW convention in Anaheim, Calif.

The UAW said it would have no comment before it read the judge's written opinion.

The UAW argued that a rerun of the entire Region 5 election would be costly and unfair to delegates validly elected, but the union agreed to hold new elections in locals where irregularities were found.

But the court agreed with Tucker and the U.S. Labor Department that the entire election had been tainted by the irregularities, which included illegal delegates and use of union funds to support Worley. The labor department also charged that a Tucker supporter was beaten at the convention where the election took place, but that charge was not brought out at the hearing.

Tucker claimed his supporters in Anaheim were upset because UAW President Owen Bieber appeared the day before the election wearing a Region 5 jacket with Worley's name on it.

The U.S. Labor Department charged that Worley misused union funds by ordering $13,000 worth of jackets with Worley's name printed on them during an election year. At the court hearing, Jay Whitman,

Cadillac's goal: Regain control of top-volume cars

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Cadillac could eventually take control of production for all of its automobiles, making the division a full-fledged car company.

Cadillac General Manager John O. Grettenberger said Cadillac taking additional engineering and manufacturing responsibility under its wing is "a distinct possibility," though no such plan is imminent.

The DeVille and Fleetwood, Cadillac's highest-volume models, are the only Cadillac cars over which the division does not have total engineering and manufacturing control. Those models are built at General Motors' assembly plant in Orion Township, Mich., which also makes the Oldsmobile 98 Regency and is run by the Buick-Oldsmobile-Cadillac Group's Flint automotive division.

In January 1987, Cadillac regained control of the engineering and manufacturing of most of its models as part of an effort to restore Cadillac's image as a world-class carmaker and regain differentiation of its products from other GM cars.

Cadillac took over what was then called the B-O-C Detroit product team. The move gave Cadillac responsibility for engineering and manufacturing of the Eldorado, Seville, Brougham and Allante — cars which represent about 40 percent of Cadillac's sales.

The move last January also put Cadillac in charge of the Detroit-Hamtramck plant, which builds Cadillacs as well as the Buick Riviera and Oldsmobile Toronado; the now-closed Clark Avenue assembly plant in Detroit; and the Reatta Craft Centre in Lansing, which builds the Buick two-seater.

"Our objective right now is to prove to the corporation that it made the right decision in giving us the opportunity to control, engineer and manufacture the products we do have," Grettenberger said.

He said the change has made the division more responsive in resolving product problems brought to its attention by dealers and has cut the time for developing new products.

"There are no handoffs," Grettenberger said. Before, Cadillac, as merely a marketing division, gathered information, then told the B-O-C engineers and manufacturing people what it wanted. Now, engineers, manufacturing and marketing people, steeped in the Cadillac tradition, work together from the start.

"The engineers and manufacturing people understand what we're looking for before we ever write our marketing specs," Grettenberger said.

Grettenberger contends that giving engineering and manufacturing responsibility to the division is not reverting to the pre-reorganization of GM because layers of organizations have been eliminated.

"General Motors assembly division and Fisher Body are gone, and we have their responsibilities now for the Eldorado, Seville, Allante and Brougham that Cadillac didn't even have prior to the 1984 reorganization," he said.

Grettenberger: When "you are building two or three nameplates, there is an opportunity for one nameplate to become . . . similar to another."

The 1984 reorganization divided GM into two major car groups — B-O-C and the C-P-C. The groups were given responsibility for engineering and manufacturing, much of which had previously been handled by GMAD and Fisher Body, and the car divisions were assigned only marketing.

Consolidation of engineering and manufacturing under the wings of the other GM divisions is less likely any time soon, because shared car platforms and assembly plants make it more difficult to divvy up responsibilities. However, there are GM insiders who are arguing that marketing divisions should be in charge of their own products and plants.

Dodge and Aretha Franklin team up to battle drunk driving by teenagers

DETROIT — Dodge is one of three corporate sponsors of a music video starring Aretha Franklin designed to discourage teenagers from driving under the influence of drugs and alcohol.

Franklin, a 17-time Grammy Award winner, is recording a new version of her hit song "Think" for the video, which is called "Th!nk, Don't Drive with Drugs or Drink!"

The video will be distributed to all TV music programs and edited into 30-second and 60-second television and radio public service announcements. Movie trailers, for use in motion picture theaters, will also be produced.

In 1985, Dodge underwrote the Stevie Wonder music video, "Don't Drive Drunk."

Dodge will also promote the message through sponsorship of the Dodge International Star Challenge, a series of regional celebrity auto races, and the National Collegiate Driving Championships.

At a press conference in Detroit last week to kick off the "Th!nk" campaign, Franklin said she was donating her talent because the cause is "very positive and a wonderful thing to be part of." Franklin is honorary chairperson of the National Association of Broadcasters' "Operation Prom/Graduation" campaign against substance abuse.

Domestic stocks dip to 62 days

Inventories at 5-month low; import car-truck supplies rise

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Inventories of unsold new U.S.-built cars as of March 1 were at their lowest level since October 1987.

Stronger-than-expected sales, spurred by retail cash-back offers, cut-rate financing and dealer incentives, were credited with the domestic-car stockpile reduction.

The industry stock, totaling 1,608,461 cars and amounting to a 62-day supply at current selling rates, was trimmed from 1,676,858 units, or 79 days, at the beginning of February and compared with 1,869,591 units, an 81-day supply, on March 1, 1987.

As of March 1, Chrysler Motors had an inventory good for 67 days, down from 101 days a month earlier. Ford Motor Co.'s represented a 65-day stock, down from 70 days. The General Motors car stockpile was 62 days compared with 84 days as of Feb. 1 this year.

Stocks of U.S.-built cars were divided this way as of March 1: GM, 51.05 percent; Ford Motor, 28.75 percent; Chrysler Motors, 16.49 percent and Volkswagen 1.26 percent. Nissan accounted for 1.13 percent of stocks; Honda for 0.77 percent; Toyota for 0.32 percent; and Mazda for 0.23 percent.

By market classification, the industry's stocks of domestic cars were divided this way: Intermediates, 42.54 percent; compacts, 23.65 percent; standards, 19.17 percent; subcompacts, 13.37 percent; and specialty cars, 1.27 percent.

There were 25 selling days in February this year, one more than in 1987 because of leap year.

Among cars with an extreme drop in stocks was Chevrolet Nova. The inventory of that line plummeted to a 58-day supply from a 208-day supply with introduction of a new 16-valve, dual overhead-cam engine option and force-feeding from a $1,200 rebate to buyers owning an import and $600 to those owning a domestic model.

Inventories of imported cars as of March 1 totaled 702,748 units, or a 75-day stock, compared with 661,940 units, a 72-day stockpile, a month earlier, and 531,520 units, a 58-day supply, on March 1 last year.

Stocks of unsold new imported light trucks shot up to a total of 208,446 units, a 91-day supply, from 184,158 units, or a 73-day supply a month before, and 222,077 units, a 73-day stock at selling rates on March 1 last year.

The industry's import-vehicle inventory total — cars and light trucks — on March 1 was 911,194 units, a 78-day stock at the current pace of sales. It was 846,098 units, a 72-day supply, a month earlier, and 753,597 units, or 62 days, a year ago.

Vehicle inventory by country March 1 was divided this way: Japan, 63.16 percent; West Germany, 14.31 percent; and other countries, 22.53 percent.

All inventory figures include vehicles at dealerships and in transit in this country. Import tallies include port inventories just as domestic inventories include factory stocks. Nissan truck figures, shown with the imports, include trucks made in this country.

Inventories of imports in this country, expressed in number of units, have grown steadily in recent years.

For example, on March 1, 1984, they totaled just 270,576 cars and trucks. A year later, the total was 337,599, and by March 1, 1986, it had reached 472,693 units. The days' supply figure has grown from 30 days in 1984 to the current 78-day accumulation.

Days-supply calculations are made at then-current sales rates.

Cash incentives grow for buyers and dealers

By Francis J. Gawronski, John A. Russell and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

Hoping to maintain their late-winter momentum, domestic and import automakers will fuel the spring selling season with widespread cash rebates on cars and trucks.

General Motors sources say the company may turn up the incentive fire on its domestic competitors by offering low-interest loans soon.

Ford Motor Co. extended its cash rebate program on selected cars and trucks until May 11 and added a rebate on a Mercury model. Likewise, Oldsmobile and Pontiac added models to their incentive lineups.

Yugo and Mazda announced new consumer rebates on their cars, and Mitsubishi and Mazda are offering dealer incentives.

FORD MOTOR CO.: Ford is extending its car and truck incentives to May 11.

Included are Mercury Tracer, $500; Ford Thunderbird and Mercury Cougar, $500; Thunderbird Turbo Coupe, $1,000; Ford Taurus and Mercury Sable, $750; Ford Tempo and Mercury Topaz with manual transmission or all-wheel-drive, $500; Ford Mustang with 2.3-liter engine, $750; and all other Ford Mustangs, $500 (except California and Hawaii where those models get $750).

Ford trucks: F-150 through F-350 models with manual transmission, $500; Bronco II and Ranger, $500; and Aerostar, $500.

Ford also increased its cash rebate on 1987 and 1988 Ford Escort and Lynx models from $400 to $500 and put a $1,000 rebate on the Mercury Cougar XR-7 V-8. Those incentives also run until May 11.

No dealer financial participation is required. Cars must be delivered before the program ends to be eligible.

MAZDA: Mazda's central and eastern import and distribution arms are conducting programs for dealers and consumers.

Mazda Motors of America (Central) has a truck incentive program for its dealers in 31 states.

The program, which runs March 1-31, pays dealers $200 to $500 per truck, depending on whether the dealer meets his sales quota or by how much he exceeds it.

Mazda Motors of America (East) is offering a U.S. savings bond to motorists who make a purchase after taking a comparison drive in a Mazda car and the designated competition from Toyota, Nissan or Honda.

The motorist receives a $500 bond if he buys the Mazda. If he purchases the competing model, he receives a $250 bond with proof of purchase.

The program runs March 1-31. No dealer participation is required.

MITSUBISHI: Mitsubishi Motor Sales of America has announced a cash incentive program for full-line and limited-product dealers and their sales managers.

Mitsubishi's sales program, which runs March 1-31, offers full-line dealers $500 to $1,000 per unit on sales of 1987 and 1988 Mirage, Cordia, Tredia and Starion models; 1987 Galant models; and 1987 and 1988 trucks, wagons and vans.

Dealers will receive nothing for the first five units sold; $500 per unit for the sixth through 30th unit sold; and $1,000 per unit for the 31st unit and above. An additional $500 bonus will be paid for each Starion sold and $250 for each Cordia.

The program offers limited-product dealers the same targets and cash payments for truck, wagon and van sales. However, they will receive a $500 bonus per unit for wagon sales.

Sales managers will receive a $2,000 bonus if the dealership achieves 100 percent or more of its sales quota.

OLDSMOBILE: Oldsmobile added its 1987 and 1988 Delta 88 and 98 models to its incentive lineup.

The division is offering a $750 rebate on Delta 88 and $1,000 on 98 models. The program runs March 3-31. No dealer financial participation is required.

PONTIAC: Pontiac announced a $500 rebate on 1988 LeMans models delivered through April 30. The program began March 7.

The division is also offering first-time new-car buyers a $600 cash allowance — in addition to the $500 rebate — when they purchase a LeMans during the program period. There is no dealer financial participation.

The $600 allowance for first-time buyers is also available on Pontiac Sunbird, Grand Am, Fiero and Firebird models. No dealer financial participation is required in those programs.

YUGO: Yugo America last week announced a $500 rebate on its GV and GVL models. The program runs March 1-31.

Cars must be purchased from dealer stock before the program expires. Dealers are asked to contribute $250 of the $500 rebate.

Yugo is running behind last year's sales pace. Yugo sold 5,358 cars in January and February, compared with 9,233 during the same period in 1987.

OBITUARIES

Sau-Wing Lam

HARTFORD, Conn. — Sau-Wing Lam, 64, director of Dah Chong Hong Ltd. of Hong Kong, which owns 12 import dealerships in New Jersey, New York and California, died Feb. 18.

Donald F. Valley

ST. CLAIR SHORES, Mich. — Donald F. Valley, 88, retired chairman of the board of National Bank of Detroit, died here Feb. 29. He played a vital role in arranging financing for American Motors when the company was faltering in the 1950s.

Reinhard M. Sarow

BRADENTON, Fla. — Reinhard M. Sarow, 74, owner of Sarow Sales, a Chrysler Corp. outlet in Saginaw, Mich., from 1931 to 1979, died Feb. 13. His son, William R. Sarow, owns Sarow Oldsmobile in Saginaw; his son-in-law, Bob Sellers, owns a Pontiac-GMC dealership in Farmington Hills, Mich.

Poling still sees 15 million sales

LIVONIA, Mich. — Despite last fall's stock market crash and a surprisingly strong start to the new year, Ford Motor Co. is sticking to the 1988 sales forecast it made before October: 10 million cars and 5 million trucks.

"We saw no reason to change our forecast after the stock market decline," said Vice Chairman Harold Poling. "We don't intend to unless we see some substantive change in the future."

U.S. cars and trucks sold at an annual rate of 16 million units during the first two months of the year. During that time, Ford increased its share of the car market to 21.2 percent — up from 20.2 percent at the end of 1987. Its share of the truck market has held nearly steady at 29 percent.

Poling made the comments last week at the company's Livonia Transmission Plant, where he addressed workers and handed out profit-sharing checks.

Aftermarket's survival tied to mastering technology

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

LAS VEGAS, Nev. — Distributors and installers of aftermarket and repair parts must adjust to changes in automotive technology and marketing if they are to survive.

More reliable cars, electronic and advanced technology systems, longer warranties and specialized service shops, such as fast lube and tuneup specialists, are changing the way the traditional aftermarket does business, said Kenneth L. Rogers, vice president, customer relations, Standard Motor Products.

Rogers addressed Automotive Service Industry Association members at the group's convention here. His company, based in Long Island, N.Y., manufactures ignition, fuel system and brake-repair components.

The association counts among its members the traditional "three-tiered" system of aftermarket parts distribution: warehouse distributors who sell to jobbers who sell to parts installers.

Independent installers, said Rogers, will stay in business only if they keep up with current technology.

"Many believe the new technology will make the customer a captive of the dealer, but the automotive aftermarket has mastered every technical challenge from automatic transmissions to solid-state electronics," he said.

"Repairing the new breed of vehicles," he added, "is a specialty reserved only for the dedicated technician who is willing to train and prepare for the high technology that will soon dominate our industry."

The companies that make and distribute aftermarket parts must help train the installers if the aftermarket is to prosper, he said.

"In our diluted industry, there are too many parts manufacturers, jobbers and warehouse distributors," Rogers said. "Those that are prepared to support and reinforce installers with clinics, advanced-technical training and management techniques will be the most successful."

Harold A. Poling, Ford Motor Co. vice chairman, told the group, "In 1965, a technician who read 5,000 pages of technical text had the ability to service any vehicle on the road. By 1987, the number of pages a technician had to master had grown to 465,000."

The Big I Show attracted an international audience -AUTOMOTIVE NEWS/ARTHUR FLAX

About 50 percent of all vehicles on the road have some electronically controlled systems, Poling said.

"Unless you're knowledgeable in these complex systems and unless you keep pace with what is sure to be the growing innovation in cars and trucks, you can't hope to satisfy your customers," he said. "And if you don't satisfy your customers, they won't be your customers for long."

Rogers said changes in technology will eliminate a number of products, but the changes present an opportunity to bring new products to market.

Carburetors and carburetor repair kits will be virtually eliminated, and longer-life spark plugs, power-steering belts and exhaust systems will slow sales of those items, he said. At the same time, a new market will open for such items as sensors and new and rebuilt power steering motors (when power steering becomes electronic).

"The rate of change has gone from evolutionary to revolutionary and those that fail to respond will have to withdraw from competition," said Charles B. Baker, president of Associated Marketing Consultants, Chesterland, Ohio.

Light trucks and import cars represent a growing opportunity for the aftermarket as their numbers increase, Baker said.

He predicted that by 1990, 5.5 million import vehicles including transplants will be sold in the United States, up from 3.6 million in 1985.

"This is the major growth area. But the real question is whether or not the powertrains will be sourced here and whether the opportunity will be there to sell replacement parts," he said.

"We are only starting to see independent garages doing more import work," he said. California is leading the way in shops that service both import and domestic cars.

More reliable cars will reduce the parts replacement rate and longer warranties also have the potential to threaten the aftermarket, Baker said.

"My impression is that the longer warranties were thought through by the sales folks as a marketing device with little thought given to maybe bringing more (non-warranty) service work into the dealer," he said.

Dealers will take advantage of the extended warranties, but the major dealers are more interested in selling cars than developing the service business, he said.

Import customers, however, have to date been comfortable with returning to the dealer for service.

"Collision shops will be a major growth area because import dealers typically don't put in body shops," Baker said. Changes in car design have also resulted in collision shops selling more hard parts like air conditioning and radiator components.

The do-it-yourself market is slipping, he said, particularly with the growth of fast-lube centers. However, there is a new opportunity to sell parts to the semi-professional mechanic who works on cars at home after finishing his regular job.

As the do-it-yourself market declines, the parts retailers will open service bays to recapture customers, Baker said. He added that the higher technology in automobiles will result in technicians being trained in narrower specialties.

The Automotive Service Industry Association convention was held in conjunction with the International Automotive Aftermarket Show.

The U.S. Department of Commerce designated the "Big I" show as one of 18 trade shows (in various industries) with high export potential. It invited a number of foreign delegations to attend, including distributors and manufacturers interested in buying U.S. auto parts or developing joint-business ventures.

William H. Crawford, account executive for the marketing development division of the Commerce Department, estimated that 1,500 representatives from businesses in foreign countries attended the show. U.S. embassies helped arrange the visits, but the U.S. government did not pay for the trips.

South and Central American countries, in particular, sent large delegations. The Commerce Department, however, was not involved in the previously reported meetings between Japanese automakers and U.S. component makers at the show.

The "Big I" show was co-sponsored by the Automotive Service Industry Association and the Motor Equipment Manufacturers Association and was managed by Pacific Automotive Show.

Service Index climbs 4% for month, all 1987

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

The Automotive News Service Index finished 1987 with an increase for December and the year.

In December 1987, the service and parts business at new-car dealerships rose 4.3 percent above the December 1986 figure.

Service volume for all of 1987 matched the December increase, up 4.3 percent over 1986.

Service volume during 1987 was relatively consistent; six months were within a range of 104.0 to 106.1 percent of year-earlier volume.

January and May were low points with the Service Index; both months registered 98.3 percent of year-earlier volume. The high point came in November when service volume climbed 12.8 percent over the November 1986 figure. A service representative for a domestic manufacturer said that a weak showing in November 1986 was a factor in the size of the 1987 gain.

Dealers attributed December's service volume increase to the effects of severe weather on customers' cars, the addition of technicians and efforts to promote sales.

A Rocky Mountain Chevrolet dealer said volume increased as a result of mailers to customers and a severe cold snap.

A Midwestern Buick-Honda dealer said business rose in part because of the addition of productive technicians and the use of shop equipment to aid sales and save diagnostic time. Other dealers also added technicians.

A Western Dodge-Toyota dealer said, "The actual number of vehicles decreased (but the) marginal increase in dollars was due to an emphasis on selling all needed repairs on vehicles already in the shop."

A Western Cadillac dealer attributed his service volume increase to body shop business and an improved holiday schedule compared with December 1986.

An Eastern Chevrolet dealer whose service volume declined said labor sales per repair order fell in comparison with the year-earlier amount.

Shop parts sales (customer paid and warranty) led the business indicators in December with an increase of 8.8 percent over December 1986.

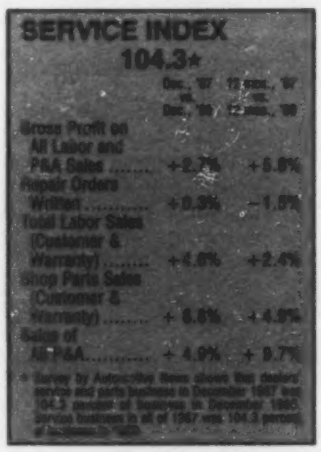
Sales of all parts and accessories rose 4.9 percent over the year-earlier month; total labor sales (customer paid and warranty) climbed 4.6 percent; gross profit on all labor, parts and accessory sales increased 2.7 percent; and repair orders written were up 0.3 percent.

Parts and accessories sales to off-premises customers fell 0.2 percent.

Sales of all parts and accessories led the indicators for the year with an increase of 9.7 percent. Gross profit on all labor, parts and accessories sales rose 5.8 percent; shop parts sales climbed 4.9 percent; and total labor sales were up 2.4 percent.

Repair orders written fell 1.5 percent.

Parts and accessories sales to off-premises customers were up 5.9 percent for 1987, compared with 1986.



SERVICE INDEX
104.3*
Gross Profit on All Labor and P&A Sales ..... +2.7% +5.8%
Repair Orders Written ..... +0.3% –1.5%
Total Labor Sales (Customer & Warranty) ..... +4.6% +2.4%
Shop Parts Sales (Customer & Warranty) ..... + 8.8% + 4.9%
Sales of All P&A ..... + 4.9% + 9.7%

Technicians' dilemma

Hi-tech cars require new service skills

By Wes Raynal
SPECIAL CORRESPONDENT

DETROIT — High-tech options such as anti-lock braking systems, traction control and active suspension promise to improve customer satisfaction, but may also leave today's technicians ill-equipped to perform repairs unless steps are taken to update training methods.

That concern was expressed by a seven-member panel of industry executives speaking at a recent SAE Show press conference here.

Panelists said a complete rethinking of the service technician's training must be implemented immediately.

"The person designing the present day and future car probably has a Ph.D and is running computer-aided-design/computer-aided-manufacturing systems," said Charles Probst, Cybern Systems Co. president. "The marketer of this car is most likely a MBA running a Lotus 1-2-3 spreadsheet program on his IBM personal computer.

"The buyer of the car has maybe a bachelor's degree and an Apple computer at home. But the person we all expect to keep this car on the road on a daily basis probably does not have any degree at all. He or she has a set of tools and a volt meter. If we're lucky, it's a digital volt meter."

Robert Anderson, Ohio Automotive Service Association president, said "Technicians of today and tomorrow will have to be academically able to follow the service business into the '90s." He added the rhetorical question, "Where and when will this educational process take place and at what cost?"

The panelists also agreed on the importance of accurate vehicle diagnosis each time a customer comes in for service.

Artificial intelligence systems will become the key to success in the service bay, said Alan R. Hinkle of Bear Automotive Equipment Co. As automotive technology climbs ever higher, there must be a parallel climb in the diagnostic equipment used by the technician.

"The magnitude of the consumer's concern for accurate vehicle diagnostics has increased sharply recently with the advent of affordable, high-tech cars," Hinkle said.

Bear is currently developing diagnostic equipment that will handle virtually all makes and models, he said. Further, that equipment will only need to be updated, but not replaced, as new vehicles are introduced.

Truck sales set record; imports skid

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

U.S. light-truck sales continued at a record level in February, but imports had a rough month.

All the domestic companies posted records for the month, while all the importers except Range Rover were off. Range Rover wasn't on sale a year ago.

Manufacturers retailed a new monthly high of 399,740 units, up 13.67 percent from February 1987. Their two-month total of 740,546 sales was up 17.92 percent over last year.

Market share for foreign firms dropped more than 6 percentage points to 12.68 percent last month compared with 18.90 percent a year earlier. For the first two months of 1988, foreign firms accounted for 14.74 percent of light-truck sales, down from 19.71 percent a year ago.

The imports retailed 50,701 trucks in February, off 23.70 percent from a year ago. Their two-month total of 109,184 was down 11.80 percent from last year.

Chevrolet had a particularly strong surge in February, based largely on its full-sized pickups. It pulled within 2,600 sales of Ford, after trailing Ford by wide margins for most of last year.

Chevrolet's February sales of 116,920 were up 29.40 percent over last year. Ford continued to lead the industry with 119,510 sales, up 10.52 percent from a year earlier.

Jeep was extremely strong with 19,548 sales, up 34.52 percent from like 1987. Chrysler's 63,433 sales of Dodge and Plymouth trucks were up 28.91 percent.

GMC with 29,628 sales was up 28.89 percent.

Mack stresses West as prime sales area

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Mack Trucks has been shoring up its Western U.S. market strength with specially tailored products and a revitalized dealer network, including the sale of some factory-owned branches.

Mack's Western region covers 15 states. Nationally, that region accounts for about 25 percent of all U.S. heavy-truck sales and 15 percent of Mack's sales, said Richard F. Murphy, Mack's vice president of marketing distribution.

The region's particular requirements also dovetail with Mack's niche-oriented marketing strategies and diversified product range.

Mack has created special models for Western operators. They include the Western Contractor, a specially optioned and weight-reduced RD model; a lightweight version of the R model for highway use; a Super-Liner long-nosed conventional; and an Ultra-Liner cabover.

Typically, Western region buyers go for more chrome and lightweight features. They also favor increased horsepower, typically V-8 engines geared to long distances and steep terrains. That led Mack to offer 450- and 500-horsepower V-8s and its new T-200 transmissions.

Mack has 52 fully appointed distributors in its Western region. They equate to what would normally be considered dealers. They have an exclusive contract to sell and service Class 8 trucks. Some also sell and service Mack's medium-duty Mid Liner. Mack has 245 Class 8 distributors.

Mack's definition of a dealer, by contrast, is someone who has an exclusive contract to sell and service its Mid Liner. Out of 245 Mack distributors, 212 sell and service the Mid Liner in the United States.

In addition to its 245 distributors, Mack also has 17 company-owned branches that sell and service its Class 8s and Mid Liner. If converted, they would become distributors. Seven of them are in its Western region.

Murphy said Mack may consider selling some of those factory branches in the future, depending on market conditions.

It has, within the past two years, assigned specially selected distributors for what were factory branches in the Los Angeles basin and the Bay area of Northern California, including San Francisco and Oakland.

Mack's commitment to the West Coast led it to continue operating such factory-owned branches in major Western cities while it sought prospective private franchisees. There are no remaining factory branches in California, though some continue to operate in Oregon and Washington state.

Murphy said Mack has no specific plans to convert any of its remaining factory branches but it would keep them under review.

Mack also has been developing a field network of highly trained sales and service outlets familiar with Western needs, said Joseph P. Rossetti, Mack executive vice president of marketing.

The company has made a sizable commitment to keep distributors up to speed on modern truck distribution practices. It also has special training schools for Western distributors to hone their management skills.

The company has been very careful in assigning new dealers, selecting only those with demonstrated product knowledge and management skills, financial solidity and a long-term commitment to the market.

Allison offers new automatic

INDIANAPOLIS — General Motors' Allison transmission division announced a new automatic transmission, designed specifically for vehicles in the 10,000- to 18,000-pound GVW class.

That is a market niche previously served only by light-truck automatics, which in many cases were not fully up to commercial users' needs, Allison said.

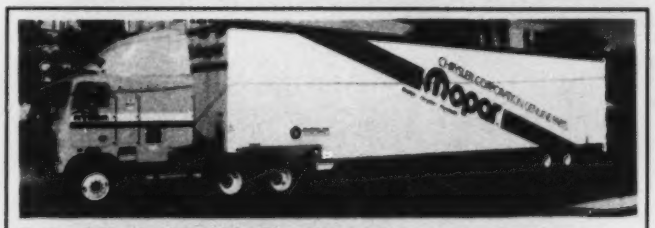
The new unit, the AT 542, is an adaptation of Allison's popular AT 545 and will accommodate gasoline and diesel engines up to 235 net horsepower.

Allison expects the new model to be particularly popular in stepvan-type vehicles and motor homes. Previously, those vehicles offered only passenger-car or light-truck automatics, the GM division said.

The AT 542 is also expected to be popular in 18- to 24-passenger school and shuttle buses; small city buses; and pickup, delivery and utility trucks up to 18,000 pounds GVW.

The AT 542 has a three-element torque converter and spur-type planetary gearing. The range clutches are disk-type, oil-cooled, hydraulically operated and self-compensating for normal wear.

The AT 542 is expected to provide the same reliability as the AT 545, but at significantly less cost.



Ryder inks deal to ship Chrysler parts
Ryder Freight Systems of Salt Lake City signed a three-year contract with Chrysler Motors to deliver car and truck parts to and from Chrysler depots, using new-design tractor-trailers.

U-Haul ups Navistar order

CHICAGO — Navistar International has received a $40 million order from U-Haul Rental Systems for an additional 2,000 of its new International model 1654 S-series "low profile" medium diesel models.

U-Haul, of Phoenix, Ariz., first placed an order for 2,000 model 1654 S-series units last year.

The trucks are being assembled at Navistar's plant in Springfield, Ohio.

U-Haul will match the 1654 low-profile chassis with special 27-foot, 1,500-cubic-foot van bodies.

Called the "Super Mover," the new trucks have special graphics on all sides of the vans.

There will be 50 different designs, each highlighting a nationally known or prominent feature of a particular state.

The 1654 is a special design developed for U-Haul by Navistar and Dana Corp.

It has a rear air suspension system that allows for height adjustments in loading.

The deck can be lowered to just 24 inches off the ground.

The truck is powered by an International 7.3-liter diesel engine, rated at 170 horsepower.

The 236-inch-wheelbase unit features an air-conditioned cab, 7,500-pound front and 15,500-pound rear axles with 4.33 ratio, 14-inch ceramic clutch, five-speed transmission, radial tires and a 51-gallon fuel tank.

GMC has also been a major supplier to U-Haul, which is currently updating its 60,000-vehicle fleet.

New Rockwell axles

Extra-heavy-duty units for Class 8 use

HOUSTON — Rockwell International has a new family of extra-heavy-duty single and tandem axles for Class 8 on- and off-highway trucks and tractors.

The new single- and double-reduction axles, offered by all major truck manufacturers, include six single-drive axles with gross-axle-weight ratings of 23,000 to 38,000 pounds and seven tandem axles rated from 48,000 to 70,000 pounds.

Leonard C. Buckman, vice president of product management for Rockwell's on-highway products organization, said the new extra-heavy-duty axles are based on the hypoid-Generoid gearing design of the new single-drive RS-23-180 axle, replacing the R-170.

Rockwell has not used the 180 design in a tandem axle before.

In using the 180 base, the company increased the size of the ring gear to the largest offered in this commercial class, and it also expanded its offering of gear ratios to provide more flexibility in specification, pulling power and durability.

Gear ratios of the single-reduction axles range from 3.73 to 7.17, while ratios of the double reductions range from 5.52 to 10.62.

The axles also feature a precision forged differential pinion and side gears for greater strength and resistance to shock impacts.

A key option on the single-reduction axles and tandems is the driver-controlled full-locking main differential that improves heavy load-hauling traction.

Rockwell is also phasing out its S/U/W-170 and 270-series single-drive axles and the tandem SR/SU/SW 170, 270 and 280 series.

It also plans to phase out the SFDD 4640 and SUDD double-reduction tandem axles.

Rockwell's new single-drive axles with 23,000- to 38,000-pound ratings include the RS-23-380 double reduction, the RS-26-180 single reduction, the RS-26-380 double reduction, the RS-30-180 single reduction, the RS-30-380 double reduction and the RS-38-380 double reduction.

Tandem axles in the 48,000- to 70,000-pound rating are: RT-48-180 single reduction and RT-48-380 double reduction, RT-52-180 single reduction and RT-58-380 double reduction and RT-70-380 double reduction.

All the tandem axles feature pressurized-filtered lubrication on the inter-axle differential.

FEATURE

IMPORTS ON THE RISE

Imports offer 86 more car models than domestics for 1988 model year

By John K. Teahen Jr.

A year ago imported cars edged domestic makes for the first time in the number of models offered in the United States. It was a close race — the tally was imports 310, domestics 300.

This year it's no contest. The domestics have trimmed their model lists. Many of the imports have expanded their lineups, and a few newcomers have entered the market.

As of Feb. 25, an *Automotive News* tabulation found 337 selections in import-dealer showrooms versus 251 for the domestic makes. (See large table at right.)

The import total is the highest ever; the previous peak was last year's 310. On the other hand, the domestic total is at its lowest since 1960.

The domestic count includes 28 transplant models — cars built in the United States by foreign manufacturers. If those models were subtracted from the domestic tally and added to the totals of their parent firms, the imports' advantage would be even greater.

The transplant makers and the number of models they build in the United States are: Volkswagen, 9; Honda, 7; Nissan, 6; Mazda, 3; and Toyota, 3. VW will retire from the transplant field when it closes its plant in Westmoreland, Pa., at the end of the 1988 model run.

Despite the disparity in total numbers, the statistically minded will note that the domestics have a huge advantage in number of models per make of car. The 251 domestic choices are divided among 17 makes of cars (12 from the Big Three plus the five transplants) for an average of nearly 15 per make. The 337 import models are shared by 40 makes for an average of just under 8.5 per make.

The 40 import makes marketed in the United States include four that have joined the ranks since last year's tabulation by *Automotive News*. The newcomers are Daihatsu (from Japan), Ford Festiva (from South Korea), Mercury Tracer (from Mexico) and Pontiac LeMans (from South Korea).

Three of those are captive imports. Only three of the domestic car divisions lack a captive import at this time. The holdouts are Buick, Oldsmobile and Cadillac, and many of their dealers handle imported cars through duals with Chevrolet, Pontiac or independent foreign makes.

Fourteen of the 40 imported makes sold in the United States are from Japan. West Germany and England have 6 apiece, followed by Italy, 5; South Korea, 3; Sweden, 2; France, 2; Mexico, 1; and Yugoslavia, 1.

Japan dominates the model rundown just as it dominates most everything else involving imported cars in this country. The Japanese makers offer 181 models, not including their transplant cars. West Germany is a distant second with 63. Totals for other nations are England, 21; Sweden, 20; Italy, 18; South Korea, 16; France, 13; Yugoslavia, 3; and Mexico, 2.

Toyota leads the model parade with 35, and Subaru has 30. Nissan has 25 imported models, and Mazda is fourth with 22. Those four makes account for one-third of the import-car selections in this country.

In keeping with their wide edge in total models, the imports have more choices than the domestics in each body style. Their totals aren't [illegible] apart in four-door sedans and station wagons, but the imports have twice as many convertibles as the domestics, and they have 60 more two-door sedans and coupes.

Here's the comparison:

	Imports	Domestics
4-door models	121	113
2-door models	155	95
Convertibles	19	10
Station wagons	42	33
TOTALS	337	251

Note that some automakers on both the import and domestic sides label their hatchbacks as "three-door" or "five-door" models. *Automotive News* counts only the side doors.

Automotive News uses the same criteria in counting import and domestic models. A choice of transmissions or engines does not necessarily constitute a separate model.

Vans and sport-utility vehicles are excluded from the totals for both imports and domestics.

Turbocharged units and four-wheel-drive cars are counted separately when they are priced that way. It is felt that those cars have enough differences in trim, equipment and mechanicals to merit separate-model designation.

Targa-type autos — those with removable solid roof panels — are listed as coupes, not as convertibles. ■

Canadian sales climb

Domestics, most imports gain in January

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — The new year got off to a bright start for all the domestic and the majority of the foreign automakers selling motor vehicles in Canada.

On the domestic side, all manufacturers registered increases in car and truck sales in January compared with a year ago.

Chrysler Canada posted an astonishing 77.1 percent sales increase in trucks. Chrysler's truck total includes the Dodge Caravan and Plymouth Voyager minivans.

General Motors of Canada saw car sales strengthen approximately 15 percent, while Ford Motor Co. of Canada had a more modest 2.3 percent gain.

Imported-car sales, with a few exceptions, also were stronger than a year ago, based on figures provided by the Canadian Importers Association.

Suzuki made the largest percentage advance in car sales, jumping from 72 a year ago to 349 this January, a 384.7 percent hike. The largest imported-car sales increase was recorded by Toyota with 4,223 units vs. 2,612 last year, a 61.7 percent improvement.

Honda, Volkswagen, Mazda, Subaru and BMW also enjoyed gains, while Hyundai, Nissan, Volvo, Mercedes-Benz and Jaguar posted losses. The most spectacular plunge was taken by Hyundai, whose sales dipped almost 50 percent, from 4,298 to 2,195.

Foreign trucks are receiving tough competition from the popular domestics. In spite of this, Toyota managed to more than double sales from 434 to 936 this January. Nissan and Mazda, on the other hand, saw some erosion in truck sales. Suzuki shot up dramatically, from 162 to 316 on the strength of the continuing popularity of its Samurai 4x4.

Production up 45% in Taiwan; 252,518 for '87

By Stephen Vines
SPECIAL CORRESPONDENT

Taiwan's automakers recorded a banner year in 1987 with output of 252,518 units, an increase of 45 percent over 1986.

The slight easing of tariff levels also has encouraged importers, who are believed to have brought in a record 40,000 passenger cars last year, accounting for some 16 percent of sales.

Taiwan's largest motor company, Yue Loong, which once seemed to dominate the market without effort, suffered another significant cut in its market share. The company's share dropped from almost 38 percent in 1986 to 32 percent last year. At the beginning of the decade, it had well over 50 percent of the market.

Yue Loong's highly publicized launch of its Feeling series appears to have had little impact on its fortunes.

The biggest market share gainer in percentage points was Yeu Tyan, which assembles Peugeot vehicles under license from the French manufacturer. The company's market share rose from 8.3 percent in 1986 to 11.6 percent last year.

With the gradual entry of imports into the market, competition has become greater and retailers are having to operate on smaller margins. The high value of the Taiwanese currency is, however, helping to make imports look more attractive.

Nearly all domestically made vehicles are destined for the home market, which remains very buoyant. Until Yue Loong started producing its own models at the end of 1986, all vehicles were produced under license agreements with overseas manufacturers.

Taiwan currently is only a small exporter of engines. However, exports are expected to rise this year.

Taiwanese manufacturers believe that domestic sales will remain good this year, but some doubt whether last year's rate of increase can be maintained.

TAIWAN MOTOR VEHICLE PRODUCTION AND SALES 1986-1987

Company	Production 1987	Production 1986
China Motor (Mitsubishi)	28,663	23,735
Ford Lio Ho	86,848	38,616
Kuo Zui (trucks only)	4,399	2,548
San Fu (Renault)	18,586	13,701
San Yang (Kinglon)	35,057	29,257
Yue Loong (Nissan & own models)	80,725	49,387
Yeu Tyan (Peugeot)	28,255	13,695

DOMESTIC SALES AND MARKET SHARE

Company	Sales 1987	Market share (percent)	Sales 1986	Market share (percent)

Ford Lio Ho	51,512	21.0	26,481	17.8
Kuo Zui	4,448	1.8	2,044	1.4
San Fu	18,710	7.6	13,036	8.8
San Yang	35,099	14.3	20,281	13.7
Yue Loong	78,359	32.0	62,515	37.6
Yeu Tyan	28,275	11.6	13,069	8.8

1987 output rises 25% in China

BEIJING, China — China National Automotive Industry Corp. reported that China produced 445,000 motor vehicles in 1987, an increase of 25 percent over 1986.

The No. 2 Motor Vehicle Plant in western Hubei province, the largest truck manufacturer in China, turned out 105,000 Dongfeng series vehicles, up 20 percent over 1986.

The No. 1 Motor Vehicle Plant in Changchun city produced 62,000 five-ton Jiefang Ca-141 trucks.

The Nanjing Motor Vehicle Plant produced 28,200 light trucks, 38 percent more than in 1986.

The Italian government has agreed to make $110 million in long-term, low-interest loans to help with the technological renovation of the Nanjing plant.

The money will be used to import Fiat technology and equipment so the plant can produce Fiat S-series light vehicles.

Domestic sales during the year exceeded 450,000, one-fifth more than in 1986. Motor vehicles in stock were reduced to 19,000 from the previous year's 30,000 units.

Volvo backs CAFE rollback to 26.0 mpg for 1989-90

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Volvo Cars of North America told NHTSA it backs an industry petition to roll back the government's fuel-economy standard.

The importer wants the standard reduced from 27.5 mpg to 26.0 mpg for the 1989 and 1990 model years.

Volvo said it supports a Feb. 12 petition by the Automobile Importers of America (of which it is a member) to set a lower corporate average fuel economy standard "so as to best balance the goal of fuel economy with other factors the public wants and needs."

Saying its customers prefer safety over fuel economy, the company said it has introduced almost all of the fuel-economy-improving technology envisioned by the U.S. Congress when it set the higher limit, yet its projected CAFE for the 1988-90 model years will be 26.0 mpg.

"These changes have produced a 26 percent gain in CAFE since 1979," the letter said, adding that the improvement has been made in spite of recent weight increases caused by adding new safety-related features.

Among those features are antilock brakes and air bags, which the company said have added 87 pounds to some car models.

Citing stable fuel prices and supply, Volvo said a customer survey showed that "Volvo buyers consistently rate safety well above fuel economy in importance to their purchase decision." The study showed fuel economy dropping from 10th to 21st place in a list of 32 topics customers ranked by importance when making their purchase decision.

Volvo said it found that the majority of its new-car owners are satisfied with the city and highway fuel economy of their cars.

While Volvo has attempted to use diesels as a means of meeting CAFE, it said that increases in diesel fuel prices relative to decreases in gasoline costs, coupled with tighter emission-control requirements for diesels, have forced it to abandon that market.

The company concluded that it has taken all practical steps to improve its CAFE.

"Although we have made substantial gains over the years, and presently offer some models about the 27.5 mpg level, this goal still remains out of reach as a fleet average," Volvo said. "The fuel situation has led consumers to demand more performance and interior room, but without any sacrifice in safety, especially in our case."

Volvo maintained that its information supports the central point in the Automobile Importers of America petition, that the higher standard will restrict consumer choice of new-car models.

TRADE

FROM PAGE 1

1.7 percent for the year.

In December 1987, U.S. exports of passenger cars and light trucks were 48.4 percent ahead of December 1986.

South Korea, Mexico and Brazil each made big inroads on the U.S. passenger-car market in 1987. Imports of Korean passenger cars climbed 136.2 percent in 1987 to 399,856 vehicles with a value of $2.1 billion. Korea shipped 169,309 vehicles to the United States in 1986 with a value of $797.3 million.

Imports of Mexican passenger cars increased 200.8 percent in 1987 to 126,266 vehicles with a value of $1.2 billion. Mexican passenger car imports totaled 41,983 vehicles in 1986 with a value of $433.2 million.

Brazil exported 48,169 vehicles to the United States in 1987 with a value of $239.2 million. Volkswagen of America's importation of the Fox in 1987 accounted for nearly all of that trade. Brazilian shipments to the United States amounted to only 207 vehicles in 1986.

Ex-commerce official cleared of misconduct

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — A government investigation has found "no evidence" that Robert E. Watkins, former U.S. Commerce Department deputy assistant secretary for automotive affairs, violated federal conflict of interest laws when he sought employment with foreign automakers last fall.

Watkins left the commerce department last year after it became public that he had formally proposed creation of a trade association representing foreign automotive investors and had asked to lead it.

The report was requested by Rep. John Dingell, D-Mich., chairman of the House Energy and Commerce Committee, after Watkins' activities became public. It found fault with Watkins' "participation in one matter affecting foreign-owned vehicle manufacturers (that) violated the Standards of Conduct" prescribed for federal employees by the White House.

Specifically, the General Accounting Office said Watkins should not have co-chaired a Sept. 24, 1987, meeting of an industry advisory group at which confidential information was discussed regarding the U.S. automotive parts industry.

Watkins participated in the meeting after sending letters to a variety of foreign-owned automotive companies seeking employment. The meeting was held to discuss negotiations between the United States and Japan over increased purchases of U.S.-manufactured auto parts.

The General Accounting Office said that before leaving office Watkins discussed employment possibilities with representatives of Mazda Motor Corp., Nissan Motor Co., the Japanese Auto Parts Industry Association, Hyundai Motor America, General Motors, the Automobile Importers of America, Toyota Motor Sales U.S.A., Northern Telecom Inc., Motorola and the American Furniture Manufacturers Association.

"Watkins should have been advised to recuse himself from any matters affecting those to whom he dispatched letters seeking employment . . ."

— GENERAL ACCOUNTING OFFICE

The General Accounting Office report said in part, "In Mr. Watkins' particular case, we believe that he did not receive adequate advice from the (Commerce Department) Office of General Counsel. . . . Mr. Watkins should have been advised to recuse himself from any matters affecting those to whom he dispatched letters seeking employment unless he intended to engage in a mass mailing that did nothing more than forward his resume."

Watkins resigned his post in the Commerce Department following congressional demands that he be fired.

In a letter sent last week to U.S. Commerce Secretary C. William Verity, Dingell said, "While I am appalled at Mr. Watkins' actions in trying to promote a trade association by actively soliciting participation of foreign entities that were within the purview of his official responsibilities, I am even more disturbed that your General Counsel's office was so ill-informed about available ethics guidelines and interpretations."

During Watkins' term as deputy assistant secretary, his office had responsibility for automotive issues pertaining to the U.S.-Canadian Free Trade Agreement, the GATT Uruguay Round of multilateral trade negotiations, review of the Generalized System of Preferences, Harmonized System of Tariff Nomenclature, Foreign Trade Zones, Japanese Voluntary Export Restraints, and Market-Oriented, Sector-Specific talks with Japan on trade in automotive parts.

GM

FROM PAGE 1

Fairfax, Kan., plant can build. However, the plant is on a gradual acceleration schedule.

Buick, meanwhile, is asking for production increases for Electra, Skylark, LeSabre and Century. Buick's sales for the calendar year were up 31 percent at the end of February. The division's inventory was 56 days on March 1, down from 75 a month earlier.

Buick has incentives covering Regal, Park Avenue, LeSabre, Electra, Century and Skylark running through March 31.

In addition, Buick will begin production April 1 of the LeSabre Olympia sedan to commemorate Buick being the official car of the 1988 U.S. Olympic Committee. Special dealer promotions for the car are planned for this spring and summer.

Oldsmobile also is requesting production increases for most of its models. The division wants more Calais, Cutlass Ciera, Delta 88 and Cutlass Supreme models. It is not asking for increases in Toronado or 98 production, General Manager William Lane said, because those cars sell best in the early part of the model year. Firenza production ends later this spring.

Oldsmobile sales at the end of February were up 15 percent for the calendar year, and its inventory was 56 days on March 1, down from 66 on Feb. 1.

Oldsmobile has incentives covering Delta 88, 98, Calais and Ciera running through March 31.

Lane said the division will take all of the Cutlass Supreme models it can get. However, the plant in Doraville, Ga., also is on a gradual acceleration plan.

Cadillac General Manager John O. Grettenberger said that for the first time since 1985, the division has a backlog of orders for Eldorado, which was stretched and restyled for the 1988 model year.

Production at the Detroit-Hamtramck plant already has been increased by 4,700 units through June by scheduling overtime. Grettenberger said no more production will be added, and the plant will not add a second shift anytime soon.

Plants likely to feel the greatest impact from the upcoming production increases are the Willow Run plant in Ypsilanti, Mich., which produces Bonneville and Delta 88; the Buick City plant in Flint, Mich., which produces Buick LeSabre and Delta 88; and the two N-car (Calais, Grand Am, Skylark) plants in Lansing, Mich.

Truck output sets record; cars tumble

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truck production for February set a record while car output dipped to a five-year low for that month.

Truckmakers built 351,498 units last month, the most ever for February and the highest monthly build since last March when 358,622 trucks were assembled.

Last month's truck production was 6.07 percent more than January's 331,392 and 8.94 percent more than the year-ago month's 322,655.

Last week's targeted truck output totaled 86,782, slightly above (0.68 percent) the prior week's 86,196 and 7.86 percent more than the year-ago week's 80,458.

Car production during February totaled 563,508 units, the lowest for that month since 1983 when 511,981 cars were assembled.

February's car output was 18.11 percent more than January's 477,103 but 19.06 percent below the year-ago month's 696,195.

Automakers scheduled 133,216 units last week, 6.08 percent more than the previous week's 125,578 but 20.30 percent less than the year-ago week's 167,143.

Last week's estimated car production was shared as follows: General Motors, 46.07 percent; Ford Motor Co., 24.78 percent; Chrysler Motors, 17.34 percent; Honda of America Manufacturing Inc., 5.52 percent; New United Motor Manufacturing Inc., 2.44 percent; Volkswagen of America, 1.50 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.24 percent; and Nissan Motor Manufacturing Co. U.S.A., 1.11 percent.

Ford's Wayne, Mich., plant resumed output today. The plant had been idle for changeover to the 1988½ Escort.

Trucks hit peak in Canada, too

Canadian truck output of 80,177 units for February was the highest ever for that month and was the highest total for any month since January 1986 when 81,115 were produced.

Last month's truck output was 8.83 percent more than January's 73,674 and 22.64 percent more than the year-ago month's 65,377.

Scheduled production of 20,163 trucks last week was slightly higher (0.39 percent) than the prior week's 20,085 and 13.89 percent more than the year-ago week's 17,704.

Car output for February totaled 91,922, the highest for that month since 1979 when 93,463 cars were built and the highest for any month since March 1986 when 99,232 cars were assembled.

February's car production was 6.37 percent more than January's 86,420 and 16.14 percent more than the year-ago month's 79,146.

Last week's targeted car output of 22,427 was 3.93 percent below the previous week's 23,344 but 27.33 percent more than the year-ago week's 17,613.

Chrysler Motors' Bramalea, Ontario, plant is idle until March 21 to make a change in the production mix.

Is Ford eyeing Rover?

U.K. tax changes may spur company

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Rival bidders for Britain's Rover Group are expected to emerge in the wake of British Aerospace's surprise bid to buy the state-owned car manufacturer.

But to the relief of Honda, Rover's long-standing industrial partner, the political attractiveness of a "British solution" may prove too much for multinational automakers to overcome.

British Aerospace is negotiating to acquire the United Kingdom government's 99.7 percent stake in Rover — in effect short-circuiting the privatization process that has been laid out for the group. The two companies have until the end of April to conclude a deal and, in the meantime, countermoves by other parties are expected to develop.

The most intense speculation surrounds Ford Motor Co. Indeed, the stakes for Ford increased last week as the British government announced a plan to double the levy on company cars as part of a sweeping tax-reform measure.

With a commanding share of the country's vital fleet business, Ford would be particularly hard hit by the tax hike, industry analysts say. But acquisition of Rover and its 15 percent United Kingdom share would give market-leading Ford about 45 percent of British new-car sales.

"I think Ford still will try for Rover because it would make them almost unchallenged in the U.K.," said Sanjay Dabysing of DRI-Europe in London. "Life would become that much easier for them. And if anybody is going to be hit

Mazda's Schultz with the UAW's Richard Shoemaker, left, and Lofton — GLENN TIBBS

Mazda pact assures jobs

Execs' pay to be cut before layoff; strikes outlawed

By Louisa Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

The first contract between a UAW-represented workforce and a Japanese auto manufacturer in the United States will bring Mazda Motor Manufacturing (USA) workers to wage parity with Big 3 workers by 1991.

The contract also contains better job guarantees than those won by General Motors and Ford Motor Co. workers last year. Mazda workers agreed not to strike for any reason.

As part of the three-year pact, Mazda agreed to cut management and officers' salaries before any hourly worker is laid off.

Auto workers in Japan have similar unspoken guarantees. But Henry Schultz, director of labor relations at Mazda said, "This is America, and that is in writing."

A UAW official said, "The job security language is similar to NUMMI's (New United Motor Manufacturing Inc.) but is perhaps even stronger." NUMMI is the GM-Toyota joint-venture assembly plant in Fremont, Calif.

The Mazda workers had been working under an interim agreement and a letter of intent signed by Mazda and the UAW. Those agreements pledged "the union's long-term cooperation in the commitment to the principles of flexibility, efficiency and the implementation of work practices and production systems similar to those used by Mazda in Japan."

Workers at the Mazda plant in Flat Rock, Mich., who are members of the newly established UAW Local 3000, approved their first contract 1,494 to 174 last Thursday. The UAW represents more than 2,000 workers building the Mazda MX-6 and the Ford Probe.

Ernest Lofton, director of UAW Region 1A and chief UAW negotiator, said the union hopes the ratification will help boost its efforts at organizing other Japanese auto plants in the United States.

The Mazda agreement is in effect from March 7 to March 3, 1991.

Highlights of the contract provided by the UAW include the following provisions:

JOB SECURITY: Mazda agreed not to lay off any worker "unless compelled to do so by economic conditions and financial circumstances so severe that its long-term financial viability is threatened."

Before laying off any workers, the company will reduce the salaries of its officers and management, in-source work previously

EDS halts Dealerline installations

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Motors' Electronic Data Systems Corp. has advised all dealers with pending purchase agreements for its much-ballyhooed Dealerline computer software system that it will cancel the agreements and return their deposits.

The company said it is not withdrawing from selling dealer communications software and that this action was taken purely to assure quality.

Despite EDS claims that there are no serious flaws in the software, only two Dealerline applications are still being marketed.

From the time that GM acquired EDS in 1984, the company promised to develop a dealership system. That announcement set off quakes of conjecture within the industry, as computer competitors worried about the entrance of such a well-funded player into their arena. They also feared that EDS would have an inside track on GM's 10,000 dealers, even with its inexperience in developing dealership systems.

At the National Automobile Dealers Association convention in early 1988, EDS set up a prominent display and urged dealers to delay their computer purchases until they saw what EDS would offer. It unveiled Dealerline a year later, at the 1987 NADA show, and began marketing it in June 1987, touting it as the answer to all dealer in-house computer needs and as the only system to offer exclusive communication capabilities with GM.

Since then, it has sold 200 Dealerline systems — ranging in price from $150,000 to $190,000, according to dealers — and installed 160.

Now the company says it has "slowed" marketing efforts and notified dealers that it will not install systems sold to them until early 1989.

EDS also told the 40 dealers with pending orders that it will return their deposits and compensate them for all costs related to their purchase of Dealerline.

EDS said its move reflects the "tremendous reception by dealers to the program and the company's inability to install, instruct and support dealerships in a manner that meets with EDS standards."

Two GM dealers who bought the entire Dealerline program and were spokesmen for the EDS system in the company's ads said the system has "bugs" but declined to discuss them specifically. EDS declined to provide the names of other dealers with its system in operation.

GRAND SLAM

New Continental a big winner for L-M; dealer orders exceed scheduled '88 build

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

The new Lincoln Continental, touted as a home run car before its launch, is taking on the look of a grand slam in Ford's 1988 box score.

To date, three months after introduction, dealers have ordered more cars than the company will build in the entire 1988 model year, Lincoln-Mercury says. With 85 percent of current output backed by retail orders, dealers have little chance to build inventory.

L-M is also wrestling with the question of how to appease customers who have to wait three months or more for delivery. As a small token, L-M is giving Cross pen and pencil sets to those who

Dealer Kuhn: "This car is turning people into kids in a candy store"

Dealer total slips; 24,938 counted in U.S.

By Edward Lapham and John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTERS

The number of dealerships selling new cars in the United States declined last year, although more outlets now sell imported cars than domestic cars.

The annual Automotive News dealership census found that on Jan. 1, there were 24,938 new-car dealerships in the United States, down 0.87 percent from the 25,156

Grievance plan slated as Chrysler trims jobs

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

ROCHESTER, Mich. — Chrysler Corp. will institute a grievance procedure for all salaried employees, including executives, as it continues to trim its employee levels and levels of management.

Anthony P. St. John, Chrysler Motors vice president — industrial relations, said that later this year, salaried employees will be offered a four-step grievance procedure ending in binding arbitration by a neutral third party.

Specifically, the procedure is likely to be used for "discipline, discharge and employment-opportunity disputes," he said.

The move was sparked by a "dramatic restructuring" currently under way at Chrysler that St. John said "will inevitably lead many employees to question management's decisions and actions."

St. John said Chrysler is seeking to reduce its layers of management as well as its employee level to make it more competitive.

St. John

"The major organizational groups in our company average about eight levels of managers and employees while our Japanese competition has five to six levels," St. John said. "We're working to get our major groups down to six layers as soon as possible, with divisions such as human resources and finance down into the four or five range to match the Japanese."

St. John, speaking at a labor-management forum at Oakland University here, said the process is designed to "improve employee relations and management practices and lessen misunderstandings."

While declining to specify a percentage of workforce reduction, he said the reductions "hopefully will be handled, in the main, through attrition."

Chrysler last year laid off an estimated 3,500 salaried employees from its 38,000-person white-collar workforce, and said at that time it anticipated 3 percent annual cuts in its salaried workforce for the next three calendar years.

Super power readied for Mustang
Jack Roush Performance Engineering has built an engine that is said to outperform Corvette's King-of-the-Hill powerplant. It is rumored to be a 500-horsepower twin-turbocharged, 351-cid V-8 for this 25th-anniversary 1989 Mustang. But Ford has not yet decided to proceed or kill the project, sources say.

GM engine cracks

305-cid V-8s in '87-'88 models targeted

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Some of General Motors' 305-cubic-inch V-8 engines, which fit into late-model Chevrolet and Pontiac cars and trucks, are developing engine block cracks and porosity due to a manufacturing defect.

A General Motors spokesman said the problem can occur in 1987 and early 1988 models.

GM said it believes the problem will only affect a fraction of one percent of all 305-cid engines. However, an informal survey of 12 dealer service managers or advisors around the country found eight dealers that had experienced the problem or knew of other dealers that had experienced it. All eight were Chevrolet dealers.

A Pontiac spokesman said the problem has not shown up in its cars.

The problem relates to a change in the handling of the rough casting at the foundry early in the 1987 model year, a GM spokesman said. The defective engines were cast at a GM Central Foundry facility in Saginaw, Mich. The facility, however, did not produce all 305-cid engines used in 1987 models.

GM is preparing a technical service bulletin, scheduled for release April 1. it will tell technicians that an otherwise unexplained loss of coolant may indicate a problem in the block casting.

When coolant leaks internally, into the engine oil, the engine eventually is destroyed.

The company did not specify how many vehicles are equipped with the 305-cid V-8.

In 1987, Automotive News estimated the engine was installed in 370,000 rear-drive cars, including Chevrolet Camaro, Caprice, Monte Carlo and Pontiac Firebird models.

GM sold 831,416 light trucks in 1987. The 305-cid V-8 was offered in most of those; however, no installation breakout was available.

Dealers that had experienced the problem said it usually showed up as cracking or porosity in the V-area of the engine, which is hidden by the intake manifold. In one case, a dealer had seen the problem in a 1986 model.

Jack G. McCloskey, service director at Jim Quinlan Chevrolet Co., Clearwater, Fla., had not experienced the block problem, but said, "At the Tampa Bay service manager's club, six service managers out of about 20 had seen the problem.

"There was some confusion because some of us felt we had seen destroyed engines but attributed it to neglected maintenance. When coolant seeps into the oil, it turns it into a gel and it looks as if the oil hasn't been changed."

Cars and trucks with the defect are covered by GM's six-year/60,000-mile powertrain warranty, introduced in 1987. If the defect is found after the one-year/12,000-mile warranty expires, customers have to pay a $100 deductible.

The cost to GM may be high. Labor costs to replace an engine can range from $400 to $800, depending on the vehicle, engine accessories and the dealer's flat rate per repair hour. Also, a dealer makes about $300 parts profit on a 305-cid V-8 replacement engine under warranty, according to sources.

GM has another 5.0-liter V-8, displacing 307-cubic-inches, but that engine is not affected.

Toyota seeks plant to build U.S. trucks

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

TORRANCE, Calif. — Toyota is laying plans for U.S. production of light-duty trucks, although final approval has not been received from the parent company in Japan.

"Eventually we will go ahead with truck production in the United States," a Toyota Motor Sales U.S.A. spokesman said. "Look at the logic. We pay a 25 percent duty on imported trucks, our sales have dropped off and our prices are way out of line, especially on the base models."

Toyota needs U.S. truck sourcing, said Martin Stein, director of the automotive analyst group of Abt Associates, Washington.

The strengthening of the yen, which makes Japanese goods cost more here, plus import duties on trucks, is hurting Toyota badly in the price-sensitive pickup market, Stein said.

Nissan already produces trucks in its Smyrna, Tenn., plant. Mazda is exploring sourcing trucks from Ford Motor Co., and more trucks will come from the Isuzu-Subaru plant under construction in Indiana.

Toyota's search for a suitable U.S. assembly site is on. Last month, Toyota executives toured Volkswagen of America's Westmoreland, Pa., assembly plant, which is scheduled to close at the end of the 1988 model run. But Toyota quickly ruled out Westmoreland.

The most logical remaining choices, according to Toyota, are:

- New United Motor Manufacturing Inc., the sprawling former General Motors car and truck assembly plant in Fremont, Calif., now producing Chevrolet Novas and Toyota Corolla FXs as a GM-Toyota joint venture.
- A greenfield plant.
- An expansion of Toyota's new Georgetown, Ky., assembly plant, due to open this summer.

NUMMI has long been considered a potential site for Toyota manufacturing. The Chevrolet Nova and Toyota Corolla FX models assembled there are officially carried on Toyota's books as knock-down kits.

The 3-million-square-foot complex south of San Francisco produced light-duty trucks and rear-wheel-drive mid-sized cars before closing in early 1982. NUMMI, with a current capacity of 900 cars a day, fills the plant with storage, training and recreational uses but only about half of the space is for manufacturing.

"Obviously, it is a logical option," said a NUMMI spokesman. "But there has been no formal discussion with us."

Toyota's first greenfield foray into U.S. manufacturing is in Kentucky. It is more central than California for shipping to the bulk of U.S. markets.

Toyota's drive to increase U.S. content, for both political and cost reasons, may also be a factor.

If Toyota adds engine and component capacity near its Kentucky plant, that would argue in favor of any truck assembly facility also being within easy shipping distance.

Nissan ad agency eyes PR firm

LOS ANGELES — Chiat/Day is negotiating to acquire Bob Thomas & Associates, the firm that handles public relations for Nissan Division of Nissan Motor Corp. in U.S.A.

Acquisition talks between Thomas & Associates and Chiat/Day Marketing and Communications Inc., the holding company for the advertising firm that won the $150 million Nissan corporate ad account last August, have been in progress "for the better part of three or four months and are moving close to an agreement," a spokesman for the public relations firm said.

According to the spokesman, the contracts are being reviewed by each firm's attorneys. "An agreement could come at any time. However, no date has been set for the formal signing," he said.

Bob Thomas said that he will continue to run the firm under the same name and at the same location in Redondo Beach, Calif. Thomas & Associates has been in business 16 years, and has been Nissan's agency for 15 years.

Chiat/Day replaced William Esty Co. as Nissan's corporate ad agency after Nissan fired Esty amid a growing inventory of cars and a declining market share. Chiat/Day formerly was the national ad agency for Porsche Cars North America.

Automotive News to open Nashville bureau

NASHVILLE, Tenn. — Automotive News will open a Nashville bureau this summer to report on activities in the fast-growing Mid-South region.

"This region has come to represent a cutting edge in automotive manufacturing and technology, and in our continuing drive to provide our readers what they need to know, we must be where the action is," said Automotive News publisher-editorial director Keith E. Crain in making the announcement Wednesday to the Tennessee Automotive Manufacturers Association.

"Just as Automotive News was first to open a Washington bureau to cover government regulation in the industry, first to open a California bureau to report on Japanese importers, first to cover the European importers from a New York bureau, and first to move overseas with full-time bureaus in Frankfurt and Tokyo, we will be the first to acknowledge this region's importance to the future of the industry," Crain added.

Crain pointed out that besides the Nissan plant in Smyrna, Tenn., and the General Motors Saturn facility under construction in Spring Hill, Tenn., other major facilities in the region include Honda plants in Marysville, Ohio; a Toyota facility under construction in Georgetown, Ky.; an Isuzu-Subaru joint venture in Indiana; and the Chrysler-Mitsubishi Diamond-Star joint venture in central Illinois. In addition, hundreds of automotive industry suppliers have opened or are building major facilities in the region.

"We welcome the location of the new Automotive News bureau in Nashville as a confirmation of Tennessee's leadership in the modern automobile industry," said Tennessee Gov. Ned McWherter. "In Tennessee today, we have one major automotive assembly plant already in operation and another major assembly plant under construction. In addition, there are almost 300 automotive suppliers in Tennessee making everything from windshields to rubber hoses to truck bodies.

"We welcome Automotive News as the first industry publication to cover major events in the auto industry's future from Tennessee."

Crain pointed out that within a few years, more than a million vehicles per year will come out of the Mid-South region.

"This clearly makes it a center of world automotive activity and one that must be treated as such," Crain said. "Many of the future ideas and relationships so critical to the industry's future competitiveness will be pioneered right here in the years to come and we want — we need — to be here to report on those events and happenings."

Nashville will become Automotive News' seventh location. Headquartered in Detroit, Automotive News also has bureaus in Washington, Los Angeles, New York, Frankfurt and Tokyo. Nashville personnel have not been named.

Makers reach abroad

Suppliers also see export opportunities

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Many U.S. commercial truck manufacturers are gearing up to increase their export sales.

Navistar International feels the key to boosting exports is to beef up its overseas distribution system and become consistently competitive, year-in and year-out, in overseas markets.

It may use non-traditional means to achieve those ends, said Neil Springer, company chairman.

"We may create a synergy off another company (that has a) distribution system closely allied to our customer base. We may tandem their distribution base with ours," he said.

For competitive reasons, Springer declined to specify which markets Navistar is targeting.

Volvo GM Heavy Truck believes its biggest export opportunity is in Canada, though it is looking elsewhere as well.

Thage Berggren, company chairman, said his new joint-venture company has established an international sales department.

"The export market looks very promising because of favorable currency exchange rates and the broadness of the White/GMC product line," he said.

He added that there are "many more promising areas than Europe for the export of Class 8 trucks and you can be sure we're investigating them."

GMC is studying export opportunities created by its new line of 1990-model medium-duty trucks and its Volvo tie-in, said John Rock, general manager.

Meanwhile, Eaton has begun supplying Nissan Diesel with its Fuller nine-speed transmissions for use in the company's vehicles for the Japanese market.

Nissan Diesel began offering the Fuller Roadranger nine-speed in its P-CW series 6x4 heavy-duty trucks in February, according to Donald Alles, manager of marketing communications for Eaton's transmission division, Galesburg, Mich.

Nissan has used Eaton Fuller gearboxes since the early 1970s for trucks shipped out of Japan, but it has not offered any foreign-sourced powertrains in its domestic vehicles until now.

Finally, Grumman Olson Division of Grumman Corp., New York, shipped six truck bodies to Isuzu Motors for a walk-through van the latter may offer in Japan.

Phil Belgio, director of vehicle and marine programs for Grumman International, stressed that "we (Grumman and Isuzu) are both in a market-evaluation phase." Isuzu is testing potential Japanese demand for a 2 ½-ton walk-through van in the kind of body configuration that Grumman offers.

Belgio said this was an outgrowth of Isuzu's efforts to market a similar van in the United States.

When Isuzu first sighted the U.S. walk-through van market for its NPR chassis and approached Grumman to help adapt its chassis to Grumman's body, Grumman officials felt there might be a similar market for the vehicle in Japan.

Belgio hopes to find out within three to six months.

Grumman also has been discussing similar U.S. sales — with overseas export potential — with Iveco, which also wants to enter the walk-through van market.

Center to gather truck statistics

ANN ARBOR, Mich. — The University of Michigan Transportation Research Institute has established a new Center for National Truck Statistics to provide authoritative information on truck safety and travel on U.S. roads.

Linda S. Wison, the university's vice president for research, called it an area that has "suffered greatly from misinformation and incomplete analysis."

The university expects the center to be funded by private industry and government.

The center will conduct surveys of truck accidents and truck travel, publish truck accident and travel statistics, provide public access to survey data, and conduct research on factors associated with the risk of accidents involving large trucks.

Kenneth L. Campbell, director of the center, said accountability has been an issue.

"We must not only collect the needed data, but also make it available for analysis by others so that researchers can compare findings in an open area," he said.

The center is an outgrowth of a research program that has been supported by the university's Transportation Research Institute since 1980 through the leadership of the Motor Vehicle Manufacturers Association.

New survey methods were developed under that program for compiling accurate national statistics on all truck accidents and travel. The results of that approach allow statistical estimates of accident risk to be developed, officials said.

Senate approves truck-brake proposal

WASHINGTON — A bill approved by the Senate this month requires the Department of Transportation to report to Congress on methods to improve truck brake performance and to begin rulemaking on the results of the report by Sept. 30, 1989. Companion legislation has not been introduced in the House.

The Senate measure, the Truck and Bus Safety Act (S.861), was sponsored by Sen. John Danforth, R-Mo., and Sen. Brock Adams, D-Wash. Adams was secretary of transportation during the Carter administration.

Danforth said the measure encourages DOT to improve truck brake performance by examining the safety benefits of anti-lock brakes.

The bill also would require DOT to eliminate, within one year of enactment, exemptions from federal safety requirements for trucks operating within commercial zones.

The bill would require DOT to complete a rulemaking one year after enactment on the need for on-board devices that automatically record driver hours and speed.

DEALERS

FROM PAGE 3

dealerships in operation on Jan. 1, 1987.

On Jan. 1, there were 23,436 dealerships selling imports and 19,530 selling domestic makes. Because of dualing, the overall total was 24,938.

In fact, there were only 1,502 dealerships where a car buyer could not consider an imported car of some manufacture, the Automotive News dealer census showed.

One year earlier, there were 19,700 dealerships selling domestic makes and 17,553 selling imported makes. There were 7,603 stores without import makes.

The reason that there are so few domestic-only dealerships today is that all domestic divisions except Buick, Oldsmobile and Cadillac now handle captive imports. And many of the Buick, Oldsmobile and Cadillac outlets have either an independent import or are dualed with Chevrolet and/or Pontiac, giving them a captive.

Although the total number of retail outlets selling new cars declined, the remaining 24,938 dealerships held 72,191 franchises from 12 domestic and 39 import-car makes, for an average of 2.89 franchises per outlet.

One year earlier, on Jan. 1, 1987, there were 25,156 dealerships holding 61,216 franchises from 13 domestic and 35 import-car makes, for a per-outlet average of 2.43 franchises.

Ten years earlier, on Jan. 1, 1978, there were a total of 59,455 franchises and 28,656 dealerships for a per-outlet average of 2.07 franchises.

Thirty-nine years earlier, on Jan. 1, 1949, the Automotive News dealer census showed there were 49,173 dealerships in the United States — an all-time high — handling 56,150 franchises of 22 domestic makes, for a per-outlet average of 1.14 franchises.

All figures in the Automotive News dealer census indicate the net change in the dealership population, for both the individual corporations and car lines, and for the industry as a whole.

Although it is clear that the well-established trend toward multi-franchise dealer operations is increasing, another trend disguises the real extent of industry consolidation into fewer hands: The expansion of new networks that require showroom exclusivity — albeit in a mall or dealership strip owned by an existing, multi-franchise dealer. Such demands dilute the franchises-per-outlet figure.

On Jan. 1, there were 3,964 exclusive import dealerships, up 7.54 percent from the 3,686 exclusive import outlets one year earlier.

The list of completely exclusive franchises currently includes Acura, Mitsubishi and Hyundai and likely will be expanded to include Toyota Lexus and Nissan Infiniti when those premium brands are launched.

Last year, the number of dealerships handling domestic-car makes declined by 170.

The total was 19,530 on Jan. 1, 1988, down 0.86 percent from 19,700 one year earlier. The 1987 decline of 170 dealerships selling domestic makes compares with a loss of 246 retail domestic-car stores in 1986.

Chrysler Motors chalked up its fifth consecutive annual gain, even without the acquisition of American Motors. Its Chrysler-Dodge-Plymouth network showed an increase of 32 outlets for the year.

AMC brought 1,139 more domestic-car dealerships to Chrysler Motors (after deducting those that were already Chrysler-AMC duals), so the Chrysler Motors domestic-car outlet total rose by 1,171 for the year.

As a corollary, the 1,349 dealerships that formerly sat under the AMC-Renault sign ceased to exist in that form. The ones that remain are Chrysler Motors Eagle outlets.

Things were simpler at Ford Motor Co. and General Motors. Ford showed a decline of 24 car dealerships for the year, and GM was down 145.

Ford's loss was lighter than in 1986, when a net 57 stores bowed out. The decline in the total number of GM car dealerships was in the same general range as the 150 outlets it lost in 1986.

The number of Big 3 intercorporate duals dropped significantly in 1987. The reason: Chrysler-AMC stores are no longer intercorporate duals because they are all in the same family.

Conversely, since AMC now is part of Chrysler Motors, there are more duals among Big 3 makes. The former AMC-Ford and AMC-GM locations are now Big 3 duals.

Franchise totals rose for half of the domestic makes during 1987. There were gains of 42 for Chrysler, 46 for Plymouth and 51 for Dodge.

At Ford Motor Co., Lincoln was up 20, Mercury picked up seven, but Ford Division was down 36.

Pontiac's franchise total was unchanged for the year, but the other GM car lines were down: Cadillac, 5; Buick, 15; Oldsmobile 20; and Chevrolet, 65.

Chevrolet had 4,910 franchises on Jan. 1, the highest total in the U.S. auto industry for either a domestic or an imported make. Ford was next with 4,580.

On the import side of the ledger, the number of foreign car makes on the U.S. market, including the captive imports of the domestic makers, increased from 35 to 39 during the year.

Daihatsu was introduced; Ford joined the import ranks with the captive Festiva; and Pontiac took on the captive LeMans. Eagle dealers now sell Medallion. All Mercury dealers now handle Tracer; previously, only about one-fourth of the Mercury outlets had the captive Merkur.

Meanwhile, British specialty maker TVR was withdrawn.

The addition of the full Pontiac, Ford and Mercury dealer groups and the return of Renault to the import ranks pumped the total number of import franchises up to 37,132 from 24,918 on Jan. 1, 1987.

The country of origin ranking also shifted from year to year. Japan, with 14 makes this year compared with 13 makes one year ago, still had the lion's share of franchises, although its 19,865 franchises on Jan. 1 accounted for 53.50 percent of total import franchises, compared with the 77.46 percent share of the total its 19,301 franchises held a year earlier.

The reason was simple: The biggest gain came from Korean franchises — from 161 to 7,779 — because Ford and Pontiac added captive makes from that country. France went from 272 to 1,537 because AMC, and later Chrysler, started importing the Renault-built Medallion. And a whole new country — Mexico — had to be added because of Mercury's captive Tracer.

West Germany and Italy posted slight declines in franchise totals, while the other countries all showed increases.

In addition to the dealerships selling cars, there also were a number of dealerships selling just trucks.

Ford has 109 that carry only Ford heavy-duty trucks, while GM has 530 dealers that handle GMC trucks but no GM cars.

Chrysler Motors has three dealers that sell only Dodge trucks and 127 that handle Jeeps and Renaults but no GM cars.

Among the imports, Range Rover had 60 dealers on Jan. 1. Suzuki had 170, while Isuzu had 161 truck-only dealers, Mitsubishi had 46 truck-only dealers and Saab reported that it had 20 Scania truck dealers without Saab car franchises.

TV ad spending by makers, dealers rises 20% for 1987

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

The nation's automakers and their dealers spent $2.4 billion on television advertising during the 1987 calendar year, up 20 percent from $2 billion in 1986.

According to the Television Bureau of Advertising, spot television advertisements — market-by-market advertising — represented the largest share of automotive television spending. Factories and dealers spent $1.1 billion on spot television advertising in 1987, up 20.09 percent from $916 million in 1986.

William G. Moll, president of the Television Bureau of Advertising, attributed the increase in spot advertising to the use of target marketing and regional marketing practices by automakers and dealers.

Advertising expenditures by the automakers for network television totaled $933 million in 1987, up 13.09 from the $825 million spent in 1986. Moll called the growth in network spots "solid," saying automakers are using network television buys for "mass reach." On the other hand, spot television is being used by dealers and dealer groups for image enhancement and awareness.

Individual dealers spent $371.4 million for television advertising in 1987, up 9.56 percent from $339 million in 1986.

General Motors was the largest new-car and truck advertiser in 1987. GM and its dealer associations spent $500 million on television ads in 1987, up 24.60 percent from $401.3 million spent on those ads in 1986.

Those figures do not include advertising for GM's non-carmaking subsidiaries such as General Motors Acceptance Corp.

More than half of GM's television spending was devoted to spot television ads. GM spent $261.4 million on spot ads, up 32.69 percent from $197 million in 1986. Network television accounted for 47.72 percent of GM's spending. GM spent $238.4 million on network television ads in 1987, up 16.69 percent from $204.3 million in 1986.

Chevrolet received the largest portion of the corporation's television expenditures and had the largest car advertising budget of any single nameplate in 1987.

Chevrolet and its dealers spent $117 million on television advertising for its cars in 1987, up 25.81 percent over the $93 million spent by the division in 1986. Chevrolet introduced its Corsica and Beretta models in early 1987 and ran a heavy schedule of television ads.

Chevrolet spent $74 million on television ads for its trucks in 1987, up 20.92 percent from $61.2 million spent on those ads in 1986. The 1987 truck expenditure was the second highest for the industry. Chevrolet introduced its new full-sized C/K pickup truck in the spring of 1987.

Although Chevrolet and its dealers outspent other GM divisions on television ads, they did not top total television expenditures for Ford Division. Ford and its dealers spent $193 million on car and truck television advertising in

TV SPENDING

FROM PAGE 40

1987 compared to $191 million for Chevrolet and its dealers.

Ford Motor Co.'s car-advertising expenditure for television was the second highest of all automakers in 1987. Ford Motor Co. and its Ford, Lincoln-Mercury and Merkur dealers spent $305 million on television in 1987, up 1.3 percent from $301.1 million in 1986.

Ford Division and its dealer advertising groups spent $115 million to advertise their cars on television in 1987, down 2.54 percent from $118 million spent in 1986.

Last year, Ford was the top spender among all truckmakers for television advertising. Ford spent $78 million to advertise its trucks on television, up 11.43 percent from the $70 million spent in 1986. Ford introduced a reskinned full-sized pickup truck in the 1987 model year.

Toyota Motor Sales and its dealers spent more money on television in 1987 than any other importer. Toyota spent $164.7 million in 1987, up 2.74 percent over the $160.3 million spent in 1986.

Toyota and its dealers spent $96.1 million on television ads advertising its cars, up 25.79 percent from $76.4 million spent on those commercials in 1986. The company and its dealers also spent $67.4 million on television ads for trucks.

In the individual dealer category, megadealer Cal Worthington's Los Angeles dealership was the largest purchaser of television advertising last year.

Saturn launches recruiting drive

TROY, Mich. — General Motors' Saturn Corp. has begun nationwide recruiting of the 3,000 workers needed to staff its new facility in Spring Hill, Tenn.

Both active and laid-off GM-UAW workers will be considered for Saturn jobs.

UAW-GM Human Resource Centers are scheduling visitation times for local employees. The first stop was in Buffalo, N.Y., to meet with employees of western New York state plants. The next stops were the Buick-Oldsmobile-Cadillac plant in Willow Springs, Ill.; the Electro-Motive plant at LaGrange, Ill.; and the Hydra-matic plant at Three Rivers, Mich. Parts or all of those three plants are being closed.

The Spring Hill complex is scheduled to open in mid-1990.

Conquest is a participating member of Ford, Chevrolet and GMC bailment pools. Drop ships also welcomed. Conquest vans meet or exceed all RVIA and FMVSS codes. Conquest is a member of RVIA.

SALES

Sales rise 16.5% for U.S. cars

Early-March total climbs to 211,772

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of new cars built in the United States climbed 16.47 percent from the year-earlier total in the first 10 days of March.

Sales totaled 211,772 cars compared with 181,820 in 1987.

The daily selling rate in early March this year averaged 23,530 units compared with 22,728 in 1987. There were nine selling days in the sales span this year compared with eight last year.

Gains were widespread in the most recent sales period. Only General Motors, Nissan and Volkswagen reported declines.

Almost all the domestic car builders are offering incentives in one form or another this year as they were in March of last year.

Retail incentives include the now-customary discount financing and money-back deals and, most recently, three months of delayed car-purchase payments, an offer being made in some states by General Motors Acceptance Corp.

Dealer incentives also are in play as sales-boosting devices by several manufacturers, including Toyota, which was not using retail incentives in the period.

Toyota reported the largest percentage sales gain in the 10 days — an increase of 122 percent. Sales of U.S.-built Toyotas rose to 1,110 units from 500.

Honda dealers delivered 93.35 percent more cars this year than last in early March, and Ford Motor Co. dealers delivered 36.61 percent more.

Chrysler Motors dealers turned over the keys to buyers of 33.10 percent more new cars in the 1988 period than they did in the corresponding 1987 sales span.

Mazda reported 10-day sales of 560 cars built in this country. Mazda began building cars in Flat Rock, Mich., in September.

Nissan had a retail sales decline of 9.64 percent for domestic cars. VW's decline amounted to 8.48 percent and GM's to 2.17 percent.

There is a new entry from Ford this month. Dealers are selling Probe models as they receive them, although the official introduction date is May 12. Sales totaled 580 for March 1-10.

Canadian car sales match last year's total in February

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Car sales in Canada in February almost matched those of the year-ago month. Domestic cars were up 105 units and imports were down 62. The combined totals were 69,177 this year and 69,134 in 1987.

Two-month sales were 3,000 ahead of last year's total.

Ford Motor Co. and Chrysler Motors posted year-to-year increases in February, just as they did in January. General Motors was off 4.2 percent after a 14.5 percent rise in January.

On the import side, Toyota was up 15.3 percent over a year ago but it was not enough to take first place for February. Honda, aided by its new Acura Division, edged ahead even though its sales slipped 5.6 percent from a strong February in 1987. Volkswagen held on to third place with a solid 33.2 percent gain.

The greatest percentage gain in sales was shown by Suzuki with a whopping 237.3 percent increase over a year go. It climbed from 12th to seventh place.

As was the case the previous month, the big loser in February was Hyundai, which suffered a 42.7 percent drop in sales compared with February last year. It followed a 48.9 percent fall in January.

Truck sales, domestic and import, totaled 32,013 in February, up 10.5 percent from 28,978 last year.

Chrysler was the big story in trucks with sales of 7,505, a 77.8 percent increase over last year. The Dodge Caravan and Plymouth Voyager minivans paced the surge. They are now in their fifth model year and are still back-ordered.

Chrysler Canada said February set an all-time monthly record for truck sales and was the 12th consecutive month of record truck sales.

Other domestic truck sales held up well. Among the imports, Suzuki was again the big winner with sales of its Samurai 4x4 up 132.1 percent. Nissan slipped the most, with a dip of 37.1 percent from February 1987.

PRODUCTION

Car output up 5%, but trails 1987

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers planned to build 144,416 cars last week, 5.77 percent more than the prior week's 136,534 but 15.62 percent less than the year-ago week's 171,149.

So far this year, 1,406,731 units have been assembled, 23.72 percent below the 1,844,187 completed last year at this point.

Companies split last week's scheduled output as follows: General Motors, 46.90 percent; Ford Motor Co., 25.40 percent; Chrysler Motors, 15.75 percent; Honda of America Manufacturing Inc., 5.60 percent; New United Motor Manufacturing Inc., 2.25 percent; Nissan Motor Manufacturing Co. U.S.A., 1.45 percent; Volkswagen of America, 1.38 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.27 percent.

Truck output totaled 84,971 units last week, a 2.81 percent dip from the previous week's 87,429. However, output rose 5.17 percent from the year-ago week's 80,185.

Year-to-date, 926,594 trucks have been built, 7.65 percent more than the 860,735 assembled last year at this point.

The second shift at GM's Van Nuys, Calif., plant resumed last week. The shift had been dropped Feb. 8.

The Pontiac Fiero plant in Pontiac, Mich., resumes output today. The plant had been idle for inventory adjustment.

GM slated overtime last Saturday at three plants: Detroit-Hamtramck; Baltimore (truck); and Pontiac, Mich. (truck).

Overtime also was scheduled last Saturday at Ford's Wixom, Mich., and Kansas City, Mo., plants.

All Ford car and trucks plants except the Edison, N.J., facility are slated for daily overtime this week.

Daily overtime is scheduled this week at Chrysler's St. Louis No. 2 plant.

Canadian cars 17% above '87

Canadian automakers scheduled production of 22,503 cars last week, 2.78 percent more than the previous week's 21,895 and 28.31 percent more than the year-ago week's 17,538.

So far this year, 242,081 units have been assembled, 17.13 percent more than the 206,677 completed last year at this point.

Truck output was slated at 19,675 units last week, 1.83 percent below the prior week's 20,042 but 13.36 percent more than the year-ago week's 17,356.

Year-to-date, 210,220 trucks have been built, 13.83 percent more than the 184,672 assembled last year at this time.

The second shift at General Motors' Oshawa, Ontario, plant was scheduled to resume today. It was dropped last November due to slow sales.

Chrysler Motors' Bramalea, Ontario, plant resumed production today. The plant had been idle to make a change in the production mix of Premier models.

DEALER TAX HEADACHE:

One man's defeat creates a bugaboo: When is incentive trip business, too?

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

Dealers who mix business with pleasure on sales incentive trips better have a well-documented business plan for the trip if they expect their income tax deductions to hold up.

Nathan Wade, owner of Wade Subaru in Salt Lake City, knows that all too well. Earlier this month, a U.S. Tax Court there said it would not regard a 1984 trip by Wade and his wife to Paris as a business-related trip even though the couple made a side trip to Germany to purchase five BMWs for resale in the United States.

It's impossible to know how often dealers take such business deductions on their taxes, but an industry expert said it happens occasionally.

"A trip will not be regarded as business-related if it is primarily for pleasure and in the nature of a vacation," the court ruled. "A mere casual connection to one's business does not justify treating the cost of the trip as a business expense."

Wade had argued that the amount the trip represented in income should be offset by an imputed business expense when he and his wife traveled to Germany and purchased the five BMWs. Wade drove one of the vehicles from Aachen to the port for delivery to the United States and his wife followed in another of the cars for the return trip to Aachen.

"The mere fact that petitioner's wife

Mazda Motor chief blasts U.S. part firms

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

ANN ARBOR, Mich. — Only six months into United States car-building, Mazda Motor Manufacturing (USA) President Osamu Nobuto harshly criticized U.S. auto parts manufacturers for not meeting Mazda's quality and delivery requirements.

In a severely worded address, Nobuto last week told the University of Michigan's eighth annual International Automotive Industry Conference that the lack of organization in American parts firms and inadequate communication — both within the parts firms and between them and their suppliers — contribute to the problems.

He said problems with American parts makers also result from Ameri-

Lawsuit bares shop secrets of Nissan, supplier

By Charles M. Thomas and Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTERS

The fiery dispute between a major automaker and its service-contract supplier has ended up in federal court, providing a rare public glimpse into the controversial manufacturer-dealer-insurer relationship — and revealing a plethora of data on warranty costs and profits and car failure rates.

Nissan Motor Corp. in U.S.A. has sued its in-house vendor of extended service contracts, Oklahoma-based Adesco Corp., in a feud that has sparked a morass of lawsuits between the two companies, dealers and Adesco's accountants.

Adesco has accused some Nissan dealers in Florida of incidents of fraud in their filing for payments on claims for service and parts. And one Adesco official charged that Nissan may be trying to bankrupt Adesco so Nissan can start its own extended service contract unit.

Adesco, which also administers and insures service contracts for Isuzu and Mazda, said its loss ratio on claims by Florida Nissan dealers was 165.8 percent, compared with 118.3 percent for Nissan nationwide. That means that for every $1 paid into service contract reserves, $1.658 was paid out in claims in Florida, while $1.183 was paid out nationally.

In contrast, the loss ratio for the two other Japanese makers handled by Adesco was 69.3 percent, it says.

Adesco, through its affiliate — Oklahoma-based Minnehoma Insurance Co. — had threatened earlier in the year to terminate as many as 100 dealers after it audited five Florida dealerships and allegedly found instances of fraudulent claims filed by dealers. Both Adesco and Minnehoma are owned by K. George Paganis.

Nissan won a temporary restraining order from a U.S. District Court judge in Los Angeles, halting Minnehoma from notifying the Japanese importer's customers and dealers in Florida and elsewhere that it will terminate dealers from the program.

A hearing on making the injunction permanent is scheduled for April 5.

Meanwhile, Minnehoma has sued five Nissan dealers in Florida on charges of fraud and civil theft

Nashville salesman turns auto biz into board game

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

If anyone needs proof that people who sell cars are among the world's most steadfast optimists, consider this: A Tennessee salesman is betting that Americans will spend $29.95 for a chance to haggle over car prices during their leisure time.

The gimmick is Test Drive, a board game created by salesman Anthony Taylor at Frank Davis Buick-Jeep-Eagle in Nashville, Tenn.

Taylor hopes that by capitalizing on the nation's love affair with automobiles, Test Drive might be 1988's answer to Trivial Pursuit and other hot board games of years gone by. In the process, he promises, the game will save players a few bucks on their next car deal.

"Once they play the game, they'll never buy a car the same way again," Taylor says.

Hyundai again swamps all in sales-per-dealer ratings

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

For the second year in a row, the average Hyundai dealer in this country delivered almost twice as many new cars as any other franchise.

The sales figure for the average Hyundai dealership in 1987 was 1,369 cars compared with 693 for the average Honda dealership, which was second in the rankings.

Foreign nameplates took the first six places in car sales per outlet and the first five spots in combined car-truck sales per dealership. Ford was the domestic leader in both categories.

It was the second year in a row that Hyundai captured the top spot and the accomplishment gains in significance in light of the fact that the first Hyundai cars went on sale in the United States in February 1986. The average Hyundai dealership delivered a record 1,431 cars in 1986.

Canada finds 'no injury' in Hyundai dumping case

By Jim Kenzie
STAFF CORRESPONDENT

OTTAWA — Hyundai Auto Canada may have been guilty of selling cars in Canada at prices lower than those charged in South Korea, but that action "has not caused, is not causing and is not likely to cause injury to the production in Canada of like goods."

The ruling by the Canadian Import Tribunal may greatly diminish the likelihood that the Big 3 will file similar dumping charges in the United States.

The tribunal's finding in the Canadian case means that Hyundai will not be liable for fines nor will it have to raise prices. The dumping charges against Hyundai were brought by General Motors of Canada and Ford of Canada.

The tribunal's finding was released last week.

Trade observers in the United States said GM's and Ford's inability to demonstrate injury in Can-

Chrysler speeds up car work

New platform due; engineering pushed

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors is accelerating its development of a new car platform. The speedup comes as the company is substantially boosting its spending for engineering and fundamentally altering its product development method.

Robert A. Lutz, Chrysler Motors president of operations, said the new platform will be an addition to the company's product lineup and is not expected to replace the K-car platform, which is likely to remain in use through hybrid variations well into the 1990s.

In addition, he said, Chrysler in the next two to three years will reduce vehicle body sheet metal changes as it concentrates on engineering improvements.

"The new platform will be a net additional, much larger, much more substantial platform," Lutz said.

Lutz declined to specify the timetable for introduction of a new platform. However, sources have said the company plans a 1992 introduction.

Chrysler's extensive use of the front-wheel-drive K platform, which carried the company from near-bankruptcy to profitability in the 1980s, has been criticized with some regularity, particularly in the motoring press.

AUTOMOTIVE NEWS/JOE WILKINS

Lutz: the new platform is not expected to replace the K-car platform

Lutz said the company has also developed a "hybrid-K platform," which will debut in the 1989 model year in the A-body Dodge Spirit and Plymouth Acclaim.

Lutz said the company earlier this month increased substantially its spending for advanced engineering research and development although he declined to specify the amount. Chrysler last year spent $800 million on engineering research and development.

Chrysler will develop a "supermarket" of engineering hardware available for future products. The company hopes to shorten product development cycles and gain niche marketing flexibility.

"The advanced engineering group will work on a number of engine configurations, gearbox configurations, drives, adaptive suspension systems, active, semi-active suspensions and other technology," Lutz said. "We will build one or two prototypes. Some of it may remain on the shelf forever."

Lutz said results from the effort, particularly in the area of suspensions, may reach the market in two years.

He also said Chrysler may work with Mitsubishi as it develops new technology.

But, he added, "I don't want to become dependent on a company we don't own for our technology."

Chrysler has also asked Lamborghini, which it owns, "to take a look at some advanced engine concepts," Lutz said. However, he added, that it is unlikely the Italian auto company would be involved in high-volume projects.

The engineering program is part of a product development strategy that allows each marketing division under Bennett E. Bidwell, president of product and marketing, to determine future product needs.

It is Lutz' job to style, engineer and manufacture the desired products. Having engineering hardware available will permit faster and more flexible product development, he said, and allow the company to respond more quickly in the market.

Sport utilities win round with Customs

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Sport/utility vehicles imported without rear seats will continue to be treated as trucks by the U.S. Customs Service, the agency announced Friday.

In letters to Suzuki of America Automotive Corp., Mitsubishi Motor Sales of America and American Isuzu, Customs has upheld previous letters of understanding allowing these vehicles to be imported as trucks.

While permitting the companies to continue the practice, it is expected that Customs will seek public comment to develop new guidelines covering these imports.

But the rulings represent a first round victory for several of the smaller Japanese companies that have been importing the vehicles without limit as trucks subject to a 25 percent tariff.

If the multi-purpose vehicles were determined to be passenger units by the service, they would fall under the 2.3 million voluntary export restraint car quota among Japanese manufacturers.

About 200,000 of the vehicles were sold last year, and sport/utility units represent one of the fastest growing segments in the auto industry.

Suzuki, which imported more than 90 percent of the 80,000 Samurais it sold last year as trucks, would have been virtually shut out of the U.S. market if the decision had gone the other way. American Isuzu, which imported more than 40,000 Trooper II sport/utility vehicles last year, relies on this category for about a third of its total sales.

"We are certainly very happy with the ruling," N. Douglas Mazza, Suzuki's executive vice president said. "We had consistently maintained that we were living up to everything we were asked to do by Customs. We are happy to have the issue settled for the time being."

Customs was asked to re-evaluate the status of the vehicles at the request of Rep. John Dingell, D-Mich., who charged that the Japanese manufacturers were evading car quotas by importing the vehicles as trucks and later installing rear seats to turn them into passenger vehicles. Dingell also ordered a Government Accounting Office investigation into the practice.

Richard Recchia, executive vice president of Mitsubishi's U.S. unit, said the ruling "means we can go back to a normal sales program for our Montero" sport/utility vehicle. The company suspended shipments last fall when the issue surfaced and planned to resume imports of car versions April 1. The ruling means that the company will also begin importing truck units at that time as well.

Recchia added, however, "What the letter leaves unanswered is what is going to happen in the future."

Customs is expected to solicit public comment on its rulings and formulate new guidelines to cover these vehicles.

At stake are considerable revenues. Sport/utility vehicles imported as trucks generate about $200 million a year under the 25 percent truck tariff. If imported as a car, the vehicles would be subject to a 2.5 percent duty.

In response to Dingell's inquiry last fall, William von Raab, who heads Customs, replied that it was legal to bring in the vehicles as trucks but said area inspectors were being notified to watch for vehicles that were outfitted with rear passenger comfort items such as arms rests, seat belt anchors and carpeting and to reclassify those units as passenger vehicles. However, the importers were unaware of the new policy.

A Customs agent in Long Beach determined that a small number of the sport/utility vehicles imported by Toyota, Isuzu and Mitsubishi were for passenger use and reclassified them as passenger vehicles. The manufacturers appealed the decision and requested that customs issue a definitive ruling on whether or not these vehicles can be imported as trucks.

At that time, Toyota Motor Sales U.S.A. and Mitsubishi Motor Sales of America halted the import of sport/utility vehicles and vans as trucks. Toyota imports the 4Runner, while Mitsubishi's model in this segment is the Montero. Suzuki continued imports, while American Isuzu shipped a number of its units to foreign trade zones and later resumed shipments.

Not all manufacturers are equally affected by the classification issue. Larger manufacturers with higher quotas under VRA have the option of importing these sport/utility vehicles, as well as vans, as passenger cars.

Grand jury eyes Roman Motors

MIAMI — A federal grand jury in Miami apparently is investigating Roman Motors Corp., the Florida-based company that claimed import rights to Romanian-built motor vehicles throughout last year despite the denials of both the manufacturer, Auto Dacia of Romania, and various Romanian embassy officials.

Several dealers said they paid Roman Motors thousands of dollars for parts, signs and franchise rights for the Romanian imports. Several civil lawsuits are now in progress as a result.

The Roman Motors saga began in early 1986 when the company and its Swiss partner, Sveltec, claimed rights from Auto Dacia to import the Dacia and Olcit cars as well as the Aro four-wheel-drive vehicle — claims quickly denied by Romanian embassy officials in the United States.

In 1987 at the National Automobile Dealers Association convention in Las Vegas, Roman Motors mounted an extensive dealer recruiting campaign and signed as many as 60 dealers, collecting as much as $1.7 million in deposits.

However, by last spring, two other importers for the United States were appointed by Auto Dacia and a key middleman in the complicated dealings, Joseph Constantine Dragan, chairman of Marimex, a Paris-based trading affiliate, admitted Roman Motors' claim for the U.S. "was in doubt."

A document signed by most of the key players revealed that the contract upon which their claims had been based was "null and void." This document was signed in May 1986, well before Roman Motors made its push to sign dealers and collect deposits.

Automotive News first revealed the controversy in January 1987 and covered developments extensively throughout the year, with reporter John Russell winning a coveted Jesse H. Neal certificate of merit for editorial achievement for his coverage.

In the Miami federal probe, the U.S. attorney in Miami is attempting to have Automotive News officials appear before the grand jury.

Estes dies; was GM president

Elliott M. "Pete" Estes, the former General Motors president who guided the company through two energy crises and led the program to downsize GM cars, died Thursday in Chicago of an apparent heart attack. He was 72.

Estes collapsed at O'Hare International Airport and was pronounced dead on arrival at Resurrection Hospital. He was traveling from his winter home near Phoenix for a Friday meeting of the Kellogg Co. board of directors.

Estes retired from GM on Feb. 1, 1981, after six years as president. During his 47 years with GM, Estes served with the Research Laboratories and three car divisions, including stints as general manager of Pontiac and Chevrolet. He had been in charge of all car and truck divisions and had headed GM's overseas operations.

Estes was GM president during the turbulent 1970s when the industry endured two energy shortages, the subsequent onslaught of Japanese imports and massive government regulations. As president, he oversaw GM's conversion to smaller, front-wheel-drive, fuel-efficient cars, now the core of GM's product line.

Friends and colleagues described Estes as "a product guy," and Estes was often quoted as saying he was "born to be an engineer." Chief among his mentors was the late Charles F. "Boss" Kettering, GM's legendary engineer, scientist and inventor.

Born in Mendon, Mich., Estes joined the GM Research Laboratories in 1934 as a student at General Motors Institute in Flint, Mich. He also held a mechanical engineering degree from the University of Cincinnati.

In 1946, he joined Oldsmobile as a development engineer as a member of the Kettering team that introduced the Olds Rocket, the division's first V-8 engine.

GM's official biography said Estes was a member of the Kettering team that developed the industry's first high-compression engine. When he was asked by Automotive News, "What about his predecessor as president, Ed-

VW, Wagons-Lits merge rental firms

PARIS — Volkswagen AG and Internationale des Wagons-Lits have combined their car-rental units to form Europe's largest rental group.

The venture calls for merger of VW's wholly owned Interrent car rental subsidiary with Europcar, the rental-car group acquired by Wagons-Lits from Renault.

The two rental businesses had combined sales of about $500 million in 1987. The combined fleet has 34,000 cars.

Europcar is currently Europe's third-largest rental-car group and is the market leader in Great Britain. Interrent is the largest rental company in West Germany.

Both companies have links to North America. Europcar is affiliated with National Car Rental in the United States and Tilden in Canada, and Interrent is linked with the Dollar Rent-A-Car network in the United States.

Capital for the new group will be split evenly, but management will consist primarily of Europcar executives.

European sales on record track

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Demand for new cars in Europe continues to grow from already record levels, with no sign of the slackening that had been predicted.

After reaching record volume of 12.4 million units 1987, Western European sales through February were nearly 12 percent ahead of last year, with all major markets still humming, according to industry estimates compiled by Automotive News.

Buoyant Italian sales pushed Fiat Auto into first place for January-February. Fiat also led Europe through the first half of 1987 before giving way to Volkswagen AG, sales leader for the past three years.

However, with its new Tipo subcompact being introduced throughout Europe this spring, the Italian maker's early lead may hold up in 1988.

Industrywide sales in the first two months totaled 2,067,000 units, up 11.5 percent from the first two months of 1987. All six volume manufacturers registered gains, led by Peugeot SA, which climbed nearly 20 percent to 258,600 sales and 12.5 percent of the European market.

The French manufacturer improved 16.5 percent in its home market, while rival Renault was relatively flat in France during the first two months. Peugeot SA sales also grew faster than the overall market in Italy, the United Kingdom and Spain in January and February.

The Peugeot group, including Peugeot and Citroen, now has a firm grasp on third place in Europe behind the Fiat and VW groups.

Fiat's 13.7 percent increase to 337,000 sales in January-February was good for 16.3 percent of the market. The group rode the crest of strong sales in Italy, Europe's No. 1 passenger-car market through February at 399,400 units. With Alfa Romeo and Lancia, Fiat now controls about 60 percent of the Italian market.

Volkswagen-Audi-Seat chalked up 282,000 sales through February, an 8.9 percent improvement over last year and a 13.6 percent share of the market.

VW's performance is linked closely to the West German market, where sales were up 6.3 percent to 356,300 in the first two months. VW remains West Germany's leader with just under 28 percent of the market, down slightly from 1987.

Ford captured 11.7 percent in Europe through February with sales of 240,900, an 11.8 percent pickup. General Motors was at 10.7 percent on volume of 221,400, an 8.6 percent rise. Renault was next at 10.3 percent, improving 6.9 percent to 212,800 units.

Among major European manufacturers, only Volvo suffered a sales decline in Western Europe. The Swedish maker dropped 2.5 percent to 43,900. Volvo was down 10 percent in its home market, where a strike by white-collar workers affected all industries in the country.

Japanese manufacturers are off to a fast start in 1988, with combined sales up 20 percent through February. Nissan boosted its European volume 30 percent to 55,400 and a 2.7 percent share. Toyota was up 15.3 percent to 52,300 and Mazda climbed 21.6 percent to 36,300.

Japanese sales in Europe reached 1.4 million units last year, though combined market share fell to 11.3 percent from 11.6 percent in 1986.

Lada, the Soviet automaker, has moved into the top 15 on Western Europe's sales table, ahead of such notables as Honda and Saab. Boosted by its new Samara subcompact, Lada sales surged nearly [illegible] percent in the first two months [illegible],000, good for 1 percent of the [illegible]ern European market.

[illegible]la's biggest gain was register[illegible] in the United Kingdom, where sales increased 51 percent in January and February to nearly 4,500 cars.

Overall sales in the United Kingdom rose 10 percent in the first two months to 375,700, second only to Italy. Sales in France sales were also up 10 percent, to 320,600.

The Spanish market continues to surge with a volume rise of 28.7 percent to 164,900. Spain surpassed 900,000 units in 1987 and may be on course for its first million-car sales year.

Ultrasonic injection for diesels

TOKYO — Toa Nenryo Kogyo has developed an ultrasonic fuel injector for diesel engines. The company hopes to be ready for production next year.

The purpose of the ultrasonic injection, as opposed to the usual pressurized atomizing, is to produce a "perfect combustion" that would be more efficient and more powerful.

Toa Nenryo is a refinery company affiliated with Exxon and Mobil. It came up with the new combustion mechanism during research on methods of producing lubricating oil.

When the company first announced a prototype in 1984, it was swamped with inquiries from the United States and Europe and requests for more research. Future development, according to a company spokesman, depends on racing tests, possibly in conjunction with automakers and engine makers.

LEGAL BRIEFS

Odometer disconnects cost Pa. dealer $17,000

HARRISBURG, Pa. — An Allegheny County car dealership that disconnected the odometers of two demonstrator vehicles, will pay $17,000 in penalties and costs under an agreement with state Attorney General LeRoy Zimmerman.

The dealership is Wexford Dodge, Wexford. The agreement was signed by Mary L. Palmer, dealership president.

A complaint filed with the petition charges that the dealership disconnected the odometers of two demo vehicles — a 1988 Dodge Caravan SE and a 1988 Dodge Dynasty. Zimmerman said the vehicles were assigned to and driven by dealership employees.

According to the complaint, the dealership's actions violated the federal Motor Vehicle Information and Cost Savings Act and the state's Vehicle Code, Unfair Trade Practices and Consumer Protection Law.

Under terms of the agreement, the dealership will pay the state $15,000 in civil penalties and $2,000 in costs.

When Wexford ultimately sells the two demos, it is required to disclose to the purchasers that the odometer reading is not the actual mileage.

Deputy Attorney General Caren L. Mariani said Wexford must inform the state Bureau of Consumer Protection within five days of selling the two vehicles and provide the bureau with copies of the transfer documents.

Florida legislators may toughen lemon law

TALLAHASSEE, Fla. — A legislative proposal to make Florida's five-year-old lemon law more effective will be considered by state lawmakers this spring.

The current law needs revision, Attorney General Bob Butterworth said, "because it is not giving new-car buyers the protection all of us want."

A significant section of the proposed revision would convert the arbitration process to a state-run program to resolve disputes between consumers and automakers.

Current law calls for manufacturers' arbitration panels, "and very few lemon purchasers have received refunds or vehicle replacements in disputes settled by manufacturer arbitrations," Butterworth said.

The new measure would also allow consumers to appeal decisions made by manufacturer panels without the expense of taking the case to court.

Decisions of the state-run arbitration program would be final unless appealed within 30 calendar days.

New-car buyers would receive, at time of sale, a written statement from the attorney general's office, advising them of their rights and listing a toll-free number for consumer inquiries.

Another provision would extend the time for taking action under the lemon law from 18 months to two years.

Manufacturers would have 30 calendar days in which to correct warranty problems instead of the current 25 working days.

The attorney general's office would take on responsibility for preparing brochures explaining the new law, application forms, adopting rules for implementation, investigations and enforcement.

Operating costs would come from a $2 fee on each new motor vehicle purchased after Jan. 1, 1989. Additional funds would be derived from a $100 arbitration fee shared equally between the consumer and manufacturer.

The proposal, sponsored by Sen. Gwen Margolis (D-North Miami) and Rep. Tom Drage (R-Winter Park) would take effect Jan. 1, 1989, if approved.

Wyoming high court upholds GM in belt case

CHEYENNE, Wyo. — The Wyoming Supreme Court ruled that General Motors was not negligent in the case of a family that suffered burns when its car caught fire and a seat-belt buckle jammed.

The plaintiffs failed to meet their burden of proof that GM was at fault, the high court justices said in upholding a Sheridan County District Court ruling on the incident.

On July 28, 1978, flames coming from the left rear of a 1974 Chevrolet Chevelle Malibu prompted Marjorie Sims to hit the brakes and order her daughters Margo and Lara out of the car.

But as the family tried to escape, Lara could not get her seat-belt buckle to release. By the time Marjorie was able to free her daughter, the two had received serious burns, according to the court records.

The court records also said Margo suffered burns in helping move Lara away from the car.

Lawyers representing the Sims family had argued that the trial court erred in assigning them the burden of proving negligence on the part of GM.

The state Supreme Court rejected that argument.

"A plaintiff claiming direct negligence on the part of a defendant must prove that the defendant's action or inaction was negligent and that such negligence proximately caused the injury sustained," Justice Richard Macy wrote for the court.

The plaintiffs presented evidence of other seat-belt buckles in GM automobiles failing to open. But the trial court excluded use of that evidence.

In upholding the lower court, the justices said that "mere proof that the seat-belt buckle malfunctioned was not sufficient to create an inference of a defect."

Although a jury in the trial court found GM was negligent in the case, the Supreme Court ruling supported the district judge's final decision that negligence was not the cause of injuries.

Chrysler Motors wins pension lawsuit

CINCINNATI — A federal appeals court ruled in favor of Chrysler Motors and the company's pension plan in a lawsuit filed by three salaried employees of Chrysler's former defense operations division.

A three-judge panel of the 6th U.S. Circuit Court of Appeals upheld a lower court's ruling that Chrysler and the pension plan satisfied federal requirements in selling Chrysler's defense operations and its pension plan to General Dynamics Corp. in March 1982.

The appeals judges unanimously affirmed a ruling by U.S. District Judge John Feikens of Detroit, who upheld Chrysler's position.

Three employees covered by the pension plan that was sold to General Dynamics said in their suit that benefits under the General Dynamics plan had not increased since 1982, while benefits under an existing pension plan for other Chrysler employees had risen.

The lawsuit accused Chrysler of breaching its fiduciary duty by failing to ensure that benefits under the two plans would be equally likely to increase.

But the appeals court agreed with Feikens' conclusion that sale of a business or part of a business does not require an employer to guarantee future non-vested benefits.

The three employees who filed the suit were Thomas P. Cotter, Warren, Mich.; Robert H. Dougherty, Royal Oak, Mich.; and David F. Robinson, Farmington, Mich.

Independents form ServNet ad co-op to fight auction chains

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Independent auto auction owners, threatened by the economies of scale that large chains can offer, are forming a cooperative advertising effort called ServNet.

Previous attempts at forming such a venture among independent auction owners have foundered.

"Each time we got a group together, the (auction) chains would step in and buy some of them," joked Alexis A. Jacobs, vice president of ServNet and owner of the Columbus Fair Auto Auction in Ohio.

She said the cooperative now has eight members and will launch its first print ads in automotive trade magazines April 1. Jacobs said the group has a 1988 advertising budget of about $100,000.

Eventually, ServNet hopes to attract 30 independent auction owners from across the nation. For a franchise fee, members can display the ServNet trademark.

Because the ServNet co-op is just getting off the ground, it has no full-time employees. Jacobs declined to disclose the amount of the franchise fee.

Not all auctions are eligible to join. Independent auctions will be judged on their commitment to quality service, orientation to fleet business, geographical location, full-service capabilities and membership in the National Auto Auction Association, Jacobs said.

In its advertising, ServNet is expected to fire not-so-subtle salvos at the auction chains. GE Capital Auto Auctions, owned by GE and Ford, may be a prime target. Both parent companies send thousands of their vehicles through GE Capital Auto Auctions.

The independents' ad message is: "Because we don't own our vehicles, we can pay our full attention to selling your vehicles. . . ."

Dealers keep their used-car stocks current by selling and buying cars at auctions. If a vehicle languishes on a dealer's lot for 30 days, he may decide to sell it and replace it with a vehicle that is more salable.

Hence, companies like GE, which sells cars coming off leases through GE auctions, and Ford, which sells vehicles the company buys back from fleets through the GE auctions, can be perceived as competing with dealers who bring cars to sell at those auctions.

Jacobs explained that a vehicle can be given preferential treatment by placing it at a good time during the sale or by getting bodywork or detailing done in a timely fashion so the vehicle makes the sale requested by the dealer.

For example, vehicles first in line at a sale may not receive the best price, so auctions employ various methods of setting a vehicle's number in the sale. Usually, they allow dealers to reserve numbers on a first-come basis.

And it is a common auction policy to offer sellers the option of running early cars through a sale.

Larry Brasher, president of ServNet and owner of Brasher's Sacramento Auto Auction, Sacramento, Calif., and Salt Lake Auto Auction, Salt Lake City, said that "independent auctions offer more than just big numbers, and we want our customers to know it."

Jacobs said ServNet hopes to offer a network of independent auctions where company fleets and lease vehicles can be distributed and sold nationwide.

Currently, only the auction chains can offer companies like General Motors, Chrysler Motors or Hertz package deals with as many as 20 locations.

High-volume sellers like the multiple locations because they prevent flooding any regional used-car market and thereby reducing prices. They also can choose to sell certain models in the regions that traditionally pay most them.

ServNet also hopes to develop sources for buying business supplies in bulk and, therefore, at lower prices than independents can now obtain.

Both Brasher and Jacobs cautioned that ServNet is not a replacement for the National Auto Auction Association.

"We've formed ServNet to increase the visibility of our marketing efforts," said Jacobs. "We hope to match the exposure of the auction chains while stressing the advantages of doing business with the independents."

Other members are Southern Auto Auction in East Windsor, Conn.; Greater Kalamazoo Auto Auction, Schoolcraft, Mich.; Statesville Auto Auction, Statesville, N.C.; State Line Auto Auction, Waverly, N.Y.; and Pennsylvania Auto Dealers Exchange, York, Pa.

SALES

FROM PAGE 1

Third place in 1987 went to another relative newcomer to the United States. Acura, with an average of 595 cars sold per point, succeeded Toyota in that slot. Acura cars went on sale here in March 1986. Its average dealership delivered 352 cars that year.

Hyundai sells only cars in this country but its sales-per-dealer average in 1987 was again well above those of makes that sell cars, pickups, vans and sport-utility vehicles.

Toyota was second to Hyundai in total vehicles per dealer and was the leader among outlets selling both cars and trucks. Toyota dealers in 1987 averaged sales of 578 cars and 279 trucks for a total of 857 units. That was down from a 1986 average of 947, made up of 716 cars 231 trucks.

Mitsubishi ranked third in car and truck sales in 1987 with an average of 831 units, including 521 cars and 310 trucks. It also was third in 1986 a per-dealership average of 791 — 489 cars and 302 trucks.

Mitsubishi has a relatively small dealer body, totaling 148 on Jan. 1, and relatively high sales.

In the top 10 makes in car sales per dealership, six were Japanese, two were American, one was Korean and one was Swedish.

Following Hyundai, Honda, Acura and Toyota in the car standings were Mitsubishi and Nissan.

Ford Division led the domestics and ranked seventh with Chevrolet a close eighth in average new-car sales per outlet.

Mazda was ninth, and Sweden's Volvo leaped ahead of Pontiac to take 10th place as Pontiac dropped to 11th.

Oldsmobile tumbled out of the top 10 to 12th place from the eighth position it held a year before.

There were 24,938 new-car dealers in this country on Jan. 1 this year, down from 25,156 a year before, according to an Automotive News analysis.

As of Jan. 1 this year, Hyundai had 224 franchise holders, up from 161 at the start of 1987. In comparison, Honda had 916 and Acura had 218 dealerships at the beginning of this year. That was up from 900 for Honda and up from 150 for Acura a year earlier.

New-car deliveries per dealership last year averaged 388 for General Motors, down from 464 in 1986. For Ford Motor Co. dealers, the average was 378, compared with 365 new cars delivered in 1986. Chrysler Motors points sold an average of 238 units against 292 in 1986.

The Chrysler average was influenced by several factors. They included interruption of Omni/Horizon production for several months, lower sales over-all and inclusion of American Motors dealerships with their relatively low sales in the Chrysler Motors average computation for 1987.

The strength of truck sales is put into perspective by a look at the average number of deliveries per dealership in comparison with car deliveries. The average Ford dealer sold 308 cars and 304 trucks. For Chevrolet dealers, the averages were 304 cars and 237 trucks.

Minivans make up a large portion of truck sales for Dodge dealers and also are included in the Ford and Chevy truck averages.

In the Automotive News sales-per-dealer rankings, captive imports are included in the figures for their parent makes. Likewise, figures for the foreign nameplates include cars and trucks built in the United States.

At Hyundai headquarters in Garden Grove, Calif., Art Meissner, vice president, national sales director, said the company is pleased with sales and expects the high averages to continue. "With the Y-2 compact being added to our product line later this year, I believe Hyundai will continue to be the benchmark for dealer success in this industry," he said.

"The Hyundai dealer body is highly experienced and a hard-working group. On top of that, they have an excellent product to sell. That's a combination that's pretty tough to beat," he said.

CAR-TRUCK SALES PER OUTLET

Final 1987	1987	1986
1. Hyundai	1,399	1,431
2. Toyota*	857	947
3. Mitsubishi	831	791
4. Honda*	869	716
5. Nissan*	673	657
6. Ford	612	605

HYUNDAI

FROM PAGE 1

ada may cause both companies to abandon any hope of winning a dumping case in the United States.

Instead, the Big 3 may throw more support behind trade legislation now before the U.S. Congress. Democrats want the trade measure completed by April 1.

Prior to the Canadian decision, the U.S. Motor Vehicle Manufacturers Association had been studying a possible dumping case against Japanese light-truck importers, and trade lawyers said the Big 3 have expressed interest in a possible case against importers of entry-level subcompacts to the United States.

Hyundai had to put up a bond of $10 million (Canadian) when the finding of dumping was announced nine months ago. The bond would have covered fines or mandated price increases. The bond has been canceled.

Washington lawyers said GM and Ford considered the Canadian anti-dumping action a "test case" for a similar filing in the United States and wanted to wait for a successful outcome before proceeding in Washington.

The attitude expressed by import industry representatives in Washington was one of relief. Their reasoning: If the Big 3 cannot win in Canada — where Hyundai was found to have dumping margins averaging 26 percent — it is very doubtful they can win in the United States, where profits are high and total domestic market share has remained fairly constant for several years.

Hyundai Auto Canada officials were ecstatic.

"For the past nine months, we've had a cloud hanging over our heads," said a spokesman for the Canadian importer. "Now, we have a task, and it's a formidable one, to regain our share of the market."

In announcing the finding to his employees, company president B.J. Park specifically thanked them all for their hard work during the past troubled year.

Officials of Ford of Canada and General Motors of Canada, the plaintiffs in the case, were surprised by the tribunal's decision.

George Peapples, president of GM of Canada, said, "We are extremely disappointed. Given the deputy minister of revenue's finding of dumping margins in excess of 26 percent, it is difficult to comprehend that the tribunal did not find any injury whatsoever.

"It has been, and remains, our concern, that continued unrestrained dumping by Hyundai will result in lost jobs and investment in the Canadian automotive industry," Peapples said.

Ford spokesman Jim Hartford complained of flaws in Canada's trade law and said the case set a bad precedent for the Canada-U.S. free trade agreement due for ratification by the Canadian Parliament and U.S. Congress later this year.

Hartford said the law forced the tribunal to look at Ford production and sales only in Canada, where small-car output has been phased out, instead of examining Ford's integrated operations throughout the continent.

"We're alarmed by the implications the decision has for other industries that may become rationalized under the free-trade agreement," Hartford said. The shortcoming must be fixed in the first years of the free-trade treaty or more industries will come in for "predatory dumping," he added.

A "rationalized" industry is one in which production to serve both Canada and the United States is spread over both countries in proportion to sales in each country. A participant in the Auto Pact, such as Ford or GM, must build cars in Canada of a value equal to those it sells in Canada, but they need not be the same cars.

To date, only the brief announcement of the tribunal's findings has been released.

An appeal process called a judicial review is available to the plaintiffs. Ford of Canada will reserve judgment on whether to pursue that course until it reviews the Statement of Reasons, a spokesman said.

GM of Canada's Peapples added, "As the reasons for the finding have not yet been issued, we are unable to comment further at this time."

Hyundai had argued throughout the case that differences in marketing systems between Canada and Korea were responsible for the differences in pricing structures. It pointed out that the Canadian operations of Ford and GM have been profitable despite Hyundai's recent sales successes, and that the Ford Tempo, built in Oakville, Ontario, was Canada's best-selling car in 1986 and 1987, displacing Hyundai's Pony, which was No. 1 in 1985.

Hyundai noted that Ford and GM have been importing cars from Asia to compete with Hyundai products. Ford has been selling the Mercury Tracer from Taiwan and Mexico; GM has the Passport Optima from Korea and the Passport I-Mark and Chevrolet Sprint from Japan.

Hyundai said that those actions proved that Hyundai had only spurred competition in the low-priced market and had not caused material damage to the Canadian manufacturing facilities of either Ford or GM.

Staff Reporter Geoff Sundstrom in Washington and The Associated Press contributed to this report.

GAME

FROM PAGE 1

Though Test Drive has been sold on a limited basis in test markets so far, Taylor has reason to be optimistic. Toys-R-Us will begin selling the game in its 313 stores nationwide this summer. And Taylor is negotiating with other retailers — including K mart, Dayton Hudson and J.C. Penney — for distribution at those chains.

The game is aimed at giving a glimpse of what goes on behind a transaction that involves millions of U.S. consumers each year: buying a car. But despite the nation's appetite for automobiles, most buyers are ill-prepared for the deal, Taylor insists. Some are putty in the hands of the dealer; others have inflated notions about how much dealers pocket on a sale.

Just as in real life, Test Drive's buyers and sellers are on the prowl for the best deal for themselves. In the game, however, players get to sit on both sides of the sales table.

In the process, they get a lesson in Taylor's theory of enlightened car retailing.

Honest salespeople, he argues, would rather deal with someone who has an idea of what goes into the price of a car. And buyers can only benefit from more knowledge about how the transaction works.

To that end, the game is designed to reward players who can cooperate and reach a happy medium. Pushovers and the bullheaded are penalized.

The object is to buy enough models in a particular car class — used, domestic, Japanese, European — to form a "dealership." More than 400 cars "from Fords to Ferraris" — are available.

The game can be played with one of two definitions of victory. In one version, the first player to create a dealership wins. In the other, the one with the most assets claims the title.

As players move their game pieces around the board, they are directed to buy or sell cars with their opponents. In the process, sellers can employ some tricks of the trade — like quoting a wildly low figure just to get the customer in the door.

If players can't reach a deal, they consult a stack of "T.O." cards — named for the salesman's practice of "turning over" a customer to the manager when the parties can't agree on a price.

In Test Drive, the T.O. card is akin to having an arbitrator set the terms of the deal. They're not necessarily fair. One might order the seller to unload the car at cost. Another might reveal that the buyer has a bad credit rating and nullify any chance for a sale.

Taylor, who is 35, says he came up with the idea when a fellow salesman recalled a bad dream wherein customers played a game about buying cars and became adept enough to trim dealers' income.

Taylor took it from there. A former teacher and artist, he developed the game with the help of a friend and had it produced at a Nashville printing company. Since then, he's formed his own firm, A.C. Taylor and Co., to manage the venture.

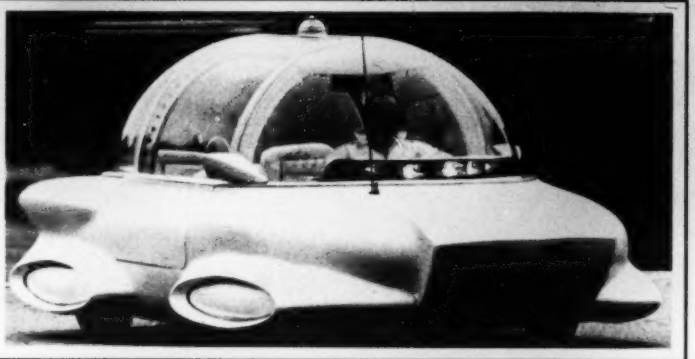
He concedes that Test Drive will hardly make him a hero among his peers. But he argues that the profession can benefit by changing its ways.

If buyers can shed their anxiety about car showrooms, they'll be inclined to visit more often, Taylor says. As for dealers: "They'll make less profit on each car, but I think they'll sell more cars."

Special correspondent Jim Henry of the Nashville Banner contributed to this story.

Give him some space

Ed Taschner of Paradise Valley, Ariz., designed his street-legal "Space Car" after the car used in Woody Allen's movie, "Sleeper." The car was built for about $50,000 and is built on a 1950 Volkswagen chassis. Taschner, a Phoenix-based developer and builder, said the car matches his round garage.



Honda to pay $6 million in bias probe

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Honda of America Manufacturing has agreed to pay $6 million in compensation to 370 blacks and women denied jobs at the company's Marysville, Ohio, assembly plant between 1983 and 1986.

The payment settles a federal discrimination investigation, the U.S. Equal Employment Opportunity Commission announced last week.

In addition to the compensation, the backpay recipients who had been refused jobs had to be employed by Honda as of Feb. 29 of this year. The investigation began in September 1984.

Honda's response to the settlement was limited to a prepared statement from Al Kinzer, vice president and senior manager of administration for the U.S. plant.

"We are pleased to reach this agreement with the EEOC," the statement said. "Honda of America is known for its commitment to personal growth and development. Honda's participation in this agreement underscores our continuing commitment to these principals."

Other elements of the agreement include expansion of the company's recruitment efforts to include Columbus, Ohio, and specific recruitment efforts among blacks; changes in promotion procedures to promote more black and female production workers; implementation of a management training program to provide a clear understanding of U.S. anti-discrimination laws; and creation of monitoring mechanisms to ensure compliance with the agreement.

It is Honda's second such discrimination agreement with Equal Employment Opportunity Commission in less than a year, the commission reported. An agreement last June on an age discrimination investigation provided backpay of $461,610 and employment and seniority adjustments for 85 workers age 40 and over who unsuccessfully applied for jobs in 1984 and 1985.

Separately, Toyota Motor Sales U.S.A. last week told the Los Angeles Times that it reached an agreement with the equal employment commission a year ago that required the company to change its minority hiring practices. The company agreed to add five minority workers to its 2,600-member staff. A Toyota spokesman said there was no fine or financial settlement involved.

Nissan Motor Corp. in U.S.A. said it was under investigation by the commission for its hiring and promotion practices and a settlement is expected within a couple of months.

NOBUTO

FROM PAGE 1

cans having accepted late deliveries as a way of life.

"The parts defect rate for local American firms is anywhere from 3 to 5 times higher than among Japanese firms," Nobuto said, and American parts firms often are content "if something is 90 percent right."

Suppliers have told Mazda that they might have to abandon business with the Japanese if they insist on greater quality improvement instead of accepting replacements for defective parts, Nobuto said.

Candace Howes, a UAW economist attending the conference, said that American parts firms are not all as inefficient as Nobuto depicted them. Howes, who studies American parts firms, said top suppliers to the Big 3 have achieved lower defect rates than 10 percent and have made significant changes in their organizations to make them more responsive to customers.

Other conference speakers, referring to the growing number of Japanese parts makers in the United States, said they doubted the transplant automakers would significantly increase their purchases from American parts firms.

But, Nobuto said, "Those who believe that Japanese firms are avoiding the use of American suppliers are sadly misinformed about both the economic necessity for us to source more and more components locally — and the difficulty that we have in educating these new business partners in our way of doing things."

Nobuto said that the local content of the Mazda MX-6 and the Ford Probe, which went into production at the Mazda plant in Flat Rock, Mich., in January, is now about 50 percent and that it is targeted at over 70 percent "by the time of our next model change."

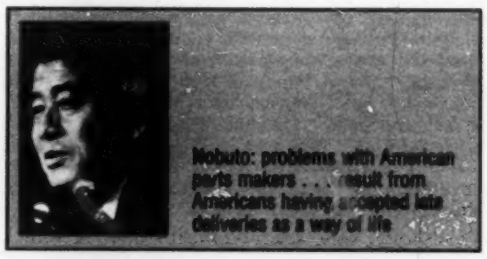
A Detroit-based Honda spokesman at the conference said that Mazda's problems with suppliers are probably due to the fact that Mazda is the newest transplant producer.

"We've worked out most of our difficulties with our American suppliers," the Honda spokesman said.

Honda has said its vehicles, produced at Marysville, Ohio, will have about 75 percent local content by 1991.

Rep. Marcy Kaptur, D-Ohio, speaking in a panel at the conference, said that though Honda "is trying harder than the other (transplants), I don't believe all their press releases."

"I know how many local suppliers can bid on Honda business," she said. Kaptur, who has been seeking legislation to increase American access to Japanese markets, has said that if an Ohio firm is not Japanese-affiliated, it doesn't get far in attempts to sell to Honda. Several Japanese component plants were established in Ohio to supply Honda. The Honda spokesman questioned Kaptur's "knowledge of our operations."



Nobuto: problems with American parts makers . . . result from Americans having accepted late deliveries as a way of life

A Honda spokesman in Marysville said that Honda has about 500 U.S.-based suppliers. About 150 of those make vehicle parts, and about 350 supply materials used in the production of cars and motorcycles.

Honda has released a list of its 28 major U.S.-based suppliers. But Honda does not break out the number of its U.S. suppliers that are Japanese-owned or affiliated. The Honda spokesmen said they did not have that information.

Speaking at the same panel, Lee Kadrich of the Automotive Parts and Accessories Association said that two-thirds of Japan's biggest auto parts makers are either established in the United States or planning operations here. That is a sign the transplants intend to source parts with those firms, with which they have links in Japan, Kadrich said.

Kadrich said exports of American auto parts to Japan have declined 9 percent since Japan agreed last year to encourage those exports.

But Kadrich said it is difficult to determine how American parts suppliers — as distinguished from Japanese-owned parts firms in the United States — are faring with the transplants. He said the Japanese government refused to break out data that would show the amount of business the transplants are doing with American parts suppliers.

Both Kadrich and Kaptur count on the current trade bill to demand trade reciprocity and require disclosure of Japanese investments in the United States.

Yoshiji Nogami, economic counselor at the Japanese embassy in Washington, said that the cost of American parts is still a problem for the transplant operations.

Nogami said he has not heard complaints from Japanese transplant manufacturers about the quality but rather about the price of American auto parts.

He said that if costs of American parts were "1 or 2 percent or even 5 percent" higher than parts from Japan, it would make sense for transplants to source here. But when American parts cost more than that, Nogami said, the transplants do not find it justifiable to source them here.

TAX

FROM PAGE 1

helped drive one of the BMWs an hour or two from Aachen, Germany, to the port city does not establish that the cost of her trip to Paris was business-related," the court said. "In the absence of his wife, petitioner could have purchased a train ticket to return to Aachen."

The court concluded, "The airplane trip to and from Europe and the time spent in Paris were primarily personal in nature and not business-related. On the facts before us, we hold that no portion of the amount includable in petitioner's income with respect to the trip to Paris in 1984 is deductible as an imputed business expense."

"I was flabbergasted," said Wade. The dealer, who represented himself in the case, said he felt the judge didn't understand the nature of his trip to purchase the BMWs. "I wouldn't have gone unless I got the trip to do the business in Germany," he said.

Wade said he spent considerable time driving through Belgium, Germany and Switzerland looking for cars to buy and later resell in the United States. "I do the same thing here and they let me deduct the costs for business," he said.

"I bought several cars since then by virtue of the contacts I made on that trip. The judge really didn't understand what I was doing."

Industry experts agreed that such business deductions for dealers were being viewed much more closely.

"This area needs to be approached in a careful manner," cautioned Bill Guptill, a principal at Park, Guptill and Co., a West Covina, Calif., certified public accounting firm that specializes in dealer services.

"As a general rule, factories tend to be putting these trips on 1099 (compensation) forms and the burden of proof is on the taxpayer to prove that he or she was on business" during the trip, Guptill said.

He said those trips, as well as business travel expenses in general, are coming under closer scrutiny, but he said there is "nothing wrong with making a business trip out of a pleasure trip" but only if "you do your homework."

Guptill recommends that if a dealer is going to do business on an incentive trip, he should draw up a specific business plan. In the case of a side trip to buy cars, the plan should include contacts, estimates of the costs involved in acquiring the cars and what the dealer reasonably expects to make on the cars once they are resold in the United States. Guptill said such a plan ahead of time makes a much stronger case than trying to justify the deductions after the fact.

"I tell my clients that you can't jump on a plane to Paris and then go spend half a day over at a Jaguar dealer talking about his business. You might be able to deduct the cabfare over to the dealership, but not the airfare over to Paris and back," he said. "You have to be reasonable."

In another facet of the Wade case, the court took issue with the manner in which Wade reported that trip and four others as income. The trips were originally given by two Salt Lake City television stations to Subaru Intermountain (Wade's distributor) as rewards for buying air time. The distributor used the trips as prizes in sales contests among its dealers.

The television stations determined their total direct costs among all travelers on a pro-rata basis — i.e., if the trip package cost the station $250,000 and there were 60 trips awarded and 50 travelers actually made the trip, each traveler was allocated a cost of $5,000.

Wade reported the cost of each trip at $2,000 per person since three other people had paid that amount for tickets they purchased from other trip winners who decided not to go.

The court disagreed, saying, "Other than the fact of those isolated purchases, however, we know essentially nothing of the circumstances surrounding those transactions.

"The trips were purchased by the stations at a cost significantly below what their retail value was if they had been purchased individually. Under the circumstances of this case, the best measure of the fair market value of the awards is the allocable pro-rata portion o the television stations' total direc costs of the trips."

The court further held that the amount should be based on the total number of trips awarded and not just the total number of travelers who actually went.

Mid-March car sales dip

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Sales of domestic cars in the United States in the March 11-20 period fell 13.17 percent from the year-earlier total and snapped an upward streak that had begun at the start of the year.

Sales totaled 189,245 units compared with 217,939 a year ago in mid-March.

There were eight selling days in the period this year and nine last year. This year's daily selling rate was down 2.31 percent.

Declines in retail deliveries were reported by six of the seven makers that were building cars in the United States both years. Only Toyota had a gain. Its sales rose 17.49 percent to 1,169 units from 995 units in the similar 1987 sales period. Mazda, which began selling domestic cars in September, had retail sales of 743 units in mid-March.

Nissan had a 10-day sales decline of 44.34 percent and Volkswagen was down 22.26 percent. Ford Motor Co. reported a falloff of 19.36 percent; General Motors dipped 12.58 percent, and Chrysler Motors was off 2.83 percent. Honda's retail sales were down 2.38 percent in the period.

The domestic industry's daily selling rate in the March 11-20 span averaged 23,656 units compared with 24,215 last year.

PRODUCTION

Truck ouput tops million, leads 1987

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

United States truckmakers built their one-millionth truck of the year last Friday, 17 days ahead of 1987.

So far this year, 1,013,618 units have been built, 7.67 percent more than the 941,448 completed last year at this point.

Last week's scheduled truck production of 87,376 rose 3.26 percent from the previous week's 84,619 and was 12.50 percent more than the year-ago week's 77,671.

Auto production was targeted at 145,133 units last week, slightly higher (0.15 percent) than the prior week's 144,909 but 11.62 percent below the year-ago week's 164,212.

Year-to-date, 1,552,357 cars have been assembled, 22.89 percent below the 2,013,069 completed last year at this point.

Last week's scheduled car output was shared as follows: General Motors, 47.69 percent; Ford Motor Co., 24.04 percent; Chrysler Motors, 15.99 percent; Honda of America Manufacturing Inc., 5.61 percent; New United Motor Manufacturing Inc., 2.24 percent; Nissan Motor Manufacturing Co. U.S.A., 1.78 percent; Volkswagen of America, 1.38 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 1.27 percent.

Chrysler announced it will increase its second- and third-quarter production schedule by 56,000 units.

A Chrysler spokesman said much of the increase will come from its Jefferson Avenue plant in Detroit and its St. Louis plant.

The Jefferson plant will increase its daily output of Dodge Aries and Plymouth Reliant models about 7 percent, effective May 2. The St. Louis plant will increase production about 6 percent effective April 25. St. Louis assembles the Chrysler LeBaron J and Dodge Daytona models.

GM slated overtime last Saturday at its Detroit-Hamtramck; Willow Run, Mich.; and Flint, Mich., plants.

All assembly plants will be idle April 1 for Good Friday.

Car production in Canada hits 27-month high

Canadian automakers scheduled 26,245 units last week, the highest since the week ended Dec. 14, 1985, when 26,733 cars were built.

Last week's targeted production was 38.98 percent more than the prior week's 18,884 and 50.50 percent more than the year-ago week's 17,439.

So far this year, 264,707 cars have been built, 18.06 percent more than the 224,215 built last year at this time.

Truck output was scheduled at 19,675 last week, 1.97 percent below the previous week's 20,071 but 6.33 percent more than the year-ago week's 18,503.

Year-to-date, 230,291 trucks have been 14.11 percent more than the 201,818 completed last year at this point.

U.S. slaps Japan on parts buys

Commerce notes 'negative perceptions' as '87 exports fall 9%

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. Commerce Department told the Japanese Ministry of International Trade and Industry it is troubled that exports of U.S.-manufactured automobile parts to Japan have decreased 9 percent in the past year.

It expressed "concern over the apparent persistence of attitudes in the Japanese press and elsewhere which, by implying U.S. suppliers are not competitive, hinder U.S. sales and increase tension."

The meeting between Joan McEntee, U.S. deputy assistant secretary of commerce, and Katsuhiro Nakagawa, director of MITI's automobile division, took place here Feb. 18.

Last week, Automotive News obtained a U.S. Department of Commerce cable summarizing the meeting. The disclosure follows criticism of U.S. suppliers by Osamu Nobuto, president of Mazda Motor Manufacturing (USA) Corp. (Automotive News, March 28). Nobuto harshly criticized U.S. auto parts manufacturers for not meeting Mazda's quality and delivery requirements.

Release of the cable coincided with publication of a U.S. General Accounting Office report on investment and sourcing decisions by Japanese automakers in the United States.

The report, titled "Foreign Investment: Growing Japanese Presence in the U.S. Auto Industry," said that U.S. auto-related employment will likely be substantially lower in 1990 than in 1985.

That will be due to gains in worker productivity, increased use of foreign parts by U.S. automakers and increased imports.

The report projected the loss of as many as 360,000 auto-related manufacturing jobs in the United States in the 1985-90 period. It said, "The operations of Japanese-affiliated automakers in the United States could result in even more losses because they use fewer workers and more foreign content than U.S. automakers."

According to the Commerce Department cable, McEntee told Nakagawa, "Given the increasing price and competitiveness of U.S. products and the commitment of Japanese companies to open their supply net-

Trade bill 'won't kill us,' say importers

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Congressional leaders reached agreement last week on the major elements of trade legislation they will send to President Reagan.

The bill is considerably weaker than earlier versions passed last year in the House and Senate, but the White House threatened a veto of the measure anyway.

Car dealers stopped short of declaring victory following the close of last week's House-Senate conference, yet acknowledged the bill is considerably less threatening than legislation approved in 1987.

Frank McCarthy, executive vice president of NADA, said the association is "pretty pleased" with the bill. "We realize that it is a 1,000-page bill that is going to impact trade one way or another, but the provisions we were most concerned about have been eliminated."

Robert McElwaine, president of the American Import Automobile Dealers Association, said, "The bill could hurt us perhaps, but it won't kill us."

McElwaine and McCarthy said they were pleased the trade conference committee decided to reject a controversial amendment sponsored by Rep. Richard Gephardt, D-Mo.

The amendment would have required mandatory retaliation against nations that practice unfair trade if they also run large trade surpluses with the United States. The amendment had been supported by organized labor, Ford Motor Co. and Chrysler Corp., but was opposed by vehicle importers

Big public U.K. dealer makes move into U.S.

By Richard Feast
AUTOMOTIVE NEWS STAFF REPORTER

Lex Service PLC, the publicly owned automotive group that is the largest retailer of cars and trucks in the United Kingdom, has agreed to buy a major shareholding in Campbell Automotive Group Inc., Orange County, Calif.

The $13.5 million deal requires the approval of the seven auto companies whose products are sold by Campbell. These include Ford Motor Co., Campbell's largest-volume franchise.

Domestic manufacturers have traditionally been opposed to public ownership of their dealerships. Ford and Campbell's other six suppliers — Audi, Mazda, Mitsubishi, Nissan, Porsche and Volkswagen — were last week studying the implications of the proposed sale.

There was little indication how the companies would react, but the development seems destined to hasten the spread of public ownership of auto dealerships in the United States.

Meanwhile, the first new-car dealership public offering is well under way. Stock for Steven Motors Inc., the Wichita, Kan., new-car dealer holding company, was being offered in seven states last week.

Lex is proposing to invest $13.5 million for a 50-percent share in Campbell. The company describes the sum as being equal to the net asset value of the business prior to the investment.

John Campbell, president of Campbell, will continue in the same position with the joint-venture company.

"We've met with all the manufacturers, and they're going through the process of reviewing the situation. It would not be appropriate for me to comment further," Campbell said last week.

David Beck, managing director of Lex Retail Group and the person who spearheaded the group's U.S. expansion plan, took a similar line. "We're discussing it with all franchisors. It would be inappropriate to comment at this stage."

Ford is reviewing the proposed sale. As in any other case in which a dealership changes hands, the deal must be approved by the company.

A Ford spokesman explained that as a matter of policy the company does not flatly oppose public ownership of dealerships. It just does not like to see it.

Ford believes privately held dealerships can keep closer watch and tighter control over the franchise agreement than publicly owned operations.

A Volkswagen of America spokesman said the company has no formal policy on the issue of public ownership, but another official said the company realizes that publicly owned dealerships will become more common and VWoA apparently will not oppose them.

Campbell and Beck first met after last year's NADA conference. They began more detailed discussions last July — at about the time that Automotive News revealed Lex's plan to expand from its British auto retailing base into the United States (Automotive News, July 13).

A joint statement released last week from the two companies said, "The investment will enable Lex to gain a greater understanding and experience of the U.S. retail automotive market.

"In turn, through the Lex involvement, Campbell will benefit from Lex's long-range experience in managing a large retail automotive group."

Asked whether Lex is still on the lookout for further U.S. acquisitions, Beck said, "This venture fits our immediate needs. The longer term depends on the success of this venture."

Preliminary figures indicate Nissan will ship 475,544 units for the Japanese fiscal year, approximately 66,200 units under the company's quota

Nissan plunge pulls Japan below car-export quota

By Mary Ann Maskery and Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTERS

TOKYO — Largely as a result of high inventories and lagging sales at Nissan, Japanese automakers will fall short of the 2.3 million cars they were allowed to export to the United States last year.

Japanese automakers are expected to ship 70,000 to 100,000 units fewer than their voluntary restraint agreement quota would have allowed for the 12 months ended March 31.

Nissan Motor Co. in U.S.A. will account for most of the shortfall.

Preliminary figures from Japanese sources indicate Nissan will ship 475,544 units for the Japanese fiscal year, approximately 66,200 units under the company's quota.

Most other makers are expected to ship 2,000 to 3,000 units fewer than their allocation allowed — or about one shipful, according to Japanese sources.

N.Y. hits secret warranties

Bill would require notices to owners

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The New York attorney general last week announced introduction of legislation to ban secret warranties in the state, saying they have cost consumers nationwide $3 billion during the past 10 years.

Attorney General Robert Abrams announced the bill — the first of its type in the nation — and called secret warranties an industrywide practice.

Secret warranties are special adjustment programs established by automakers under which they agree to pay for all or part of specific repairs not covered by standard warranties.

A spokesman for the Motor Vehicle Manufacturers Association said he had not seen the bill and had no comment.

In Albany, N.Y., Norma Sharp, executive vice president of the New York State Automobile Dealers Association, said she has not seen the legislation. However, she said she believed the attorney general may be using the term secret warranties "rather loosely."

"He may be calling something a warranty that is not a warranty," she said.

Abrams said that the adjustments are routinely revealed to dealers in service bulletins, which may or may not be read and implemented. Manufacturers occasionally issue press releases, which may not be printed. The bill would require manufacturers to notify consumers of those programs.

Now, Abrams said, since only dealers are notified, consumers often are unaware of the free or reduced-cost repairs.

"Auto manufacturer and dealers routinely deny the existence of special-adjustment programs when consumers complain, so we call them 'secret warranties,' " Abrams said. "This bill would make it illegal for manufacturers to withhold information about an established policy to pay all or part of the cost of a repair beyond the terms of the warranty."

Abrams' office earlier this month called the customer-service representatives of 24 domestic and foreign auto manufacturers. Only one

50 of a kind for Corvette Challenge
Race teams competing in the Sports Car Club of America's new 10-race, $1 million Corvette Challenge series picked up the 50 identically prepared cars from Chevrolet headquarters in Warren, Mich., last week. The cars are like all other 1988 Corvettes except for roll bars, racing seats, racing mag wheels and other safety equipment. The Corvette Challenge series begins May 1 as part of the Grand Prix of Dallas and ends in St. Petersburg, Fla., Oct. 23. In addition to the $1 million prize fund, race teams and dealers will vie for $25,000 that will go to the best Chevy dealer promotion held in conjunction with the racing series.

GM parts divisions told to reduce ads

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors' component-making divisions have been told to reduce advertising expenditures to help the corporation meet budget objectives for the 1988 model year.

Each division is responsible for how much it will reduce advertising; however, last week GM's Delco Products and Saginaw divisions announced that they would stop advertising for the rest of the 1988 model year, according to GM sources.

"I think that the corporation just looked at its profit and budget targets and decided to make the move now," said a GM agency source.

The announcement came shortly after all GM divisions received a letter from Robert T. O'Connell, GM vice president and group executive — financial group, ordering them to reduce discretionary expenditures.

The component operations are being scrutinized closely by both GM and the UAW to ensure that each division and plant is meeting cost and quality goals. Plant-by-plant plans to meet those goals are to be submitted to GM by June 30.

"There's been a hold on everything; cancellation may be too strong a word" for the components divisions' advertising cutbacks, said a spokesman for GM's Inland Division in Dayton, Ohio, which makes seats, interiors and steering wheels.

"We've just been asked to be careful on discretionary items," said the spokesman.

GM has said that about 10 percent of components it makes cost more than if they were purchased. The company is trying to identify non-competitive operations and improve or close them.

In the last two years, GM has announced that it would close or partially close several of its manufacturing facilities, including five component plants.

Saginaw Division, headquartered in Saginaw, Mich., produces steering mechanisms, axles, differential assemblies and front disc brake assemblies.

Delco Products in Dayton, Ohio, produces heating and cooling equipment, windshield washer systems, electronic components, bumper components, struts and springs.

One GM advertising source said that — unlike GM's car divisions — the two component divisions that halted ad spending are not dependent on advertising to keep up sales momentum.

"There also has been a question of whether GM needs to advertise its component division," he said. —

The two agencies that will be hit hardest by the ad cancellations are Lintas:Campbell-Ewald, which handles Delco Products, and Leo Burnett USA, which handles Saginaw Division.

Audi reports U.S. loss, beefs up ad campaign

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

Audi of America lost $120 million in 1987 as sales dropped, marketing costs rose and the company continued to wrestle with allegations of unintended acceleration.

The earnings announcement, made by Audi AG Chairman Ferdinand Piech last week, came as Audi expanded its first advertising campaign in response to questions about the safety of Audi cars.

The company also submitted a report to NHTSA which, the company said, demonstrates that its shift-lock device prevents cars from taking off uncontrollably. The Center for Auto Safety, a consumer advocate group, disputed Audi's conclusion.

Piech told a group of journalists in West Germany that the company's U.S. sales arm lost 200 German marks ($120 million) last year. Volkswagen AG does not normally break down the financial results between its Audi and Volkswagen divisions in the United States.

The losses do not come as a surprise. Audi unit sales dipped 31 percent in the United States in 1987, the second year of sharp declines. Last year Audi nearly doubled its sales and marketing budget, launching the Audi 80 and 90 series and offering discounts worth as much as $5,000 on some of its cars.

In its report to NHTSA, Audi said that since September 1986, when it began recalling the Audi 5000 to install shift locks, the company has received 396 complaints from drivers who have the devices in their cars. The shift lock forces drivers to depress the brake before shifting into drive or reverse. The complaints included reports of poor idle performance that fell under the broad category of "unwanted engine power."

Of the reports, 174 involved accidents and there were 36 personal injuries and no deaths, a spokesman said. None of them were "headline type" accidents — such as a case last fall where a New Jersey vehicle inspector was injured when an Audi 5000 he was driving apparently surged out of control and struck a tree. That incident is still being investigated, said the spokesman.

Audi said that in all but 22 reports, the incidents did not fit the "sudden-acceleration pattern" where cars allegedly have taken off at full throttle when shifted into gear and the brakes have failed. And in each of the 22, Audi later tested the brakes and found that they worked.

Fifteen of those 22 involved shift locks that didn't work; all but one were installed improperly. The balance of the 22 occurred when cars were shifted from neutral into gear. The shift lock isn't designed to operate from neutral.

Clarence Ditlow, head of the Center for Auto Safety, said Audi's report is further evidence that the shift lock isn't the answer.

"If someone admits that they have 394 incidents of unintended acceleration and has to spend 60 pages explaining it, they obviously have a problem," he said. "If the shift lock worked, you wouldn't have these incidents."

Audi, however, said that any type of complaint is recorded by the company and included in its report to NHTSA. Among the complaints, the spokesman said, are two incidents in which owners reported that their unoccupied cars jerked forward as they left conveyers at the end of a car wash.

Piech: Audi's U.S. sales arm lost 200 German marks ($120 million) last year

Others included cars skidding on slick pavement and collisions at intersections. Some incidents have closely resembled unintended-acceleration cases. "It's obvious why the owner would think that that was unintended acceleration, but it was not," the spokesman said.

The range of reports indicates that "the general public does not know what the classic case of unintended acceleration is," the spokesman said.

Audi made the shift locks standard on its 1987 models with automatic transmissions. It has investigated 16 complaints on those models and said they did not fit the unintended-acceleration definition. There have been no complaints on 1988 models, Audi said.

Audi hasn't finished its study on 65 of the 396 complaints. In addition, there have been 703 reports involving cars without shift locks. The spokesman said the company is giving priority to the cases involving shift locks and hasn't yet studied the others.

In its report, Audi contends that 73 percent of owner complaints came after publicity surrounding the Audi 5000 began snowballing in March 1986.

Audi is touting the merits of the shift lock in a new advertising campaign that began in major newspapers March 25 and expanded into national magazines last week.

The campaign marks a turnabout in the company's approach to the issue. Previously, Audi had felt alone in confronting the problem, explained Tony Kirton, Audi's marketing director. But now there is a growing awareness of the industrywide nature of the problem.

Audi is also working on a public relations campaign that will, in part, address the issue in ways other than commercial advertising. Proposals are being developed by Audi's New York agency and are expected to be presented to company officials next week.

The ads are one- or two-page spreads that picture an Audi 5000 beneath a bold headline: "It's time we talked." They suggest that Audi erred at first when it decided to let the facts speak for themselves.

"Our silence not only offended our loyal customers but also prejudiced potential customers against us."

The ads cite studies that indicate there is no safety defect in the car. And they point to the Japan Automobile Manufacturers Association's recommendation that its member companies install shift locks in their cars with automatic transmissions.

The magazine and newspaper segments are the first in a series of print ads that are scheduled to appear through June. Others will focus on safety, quality and the company's new guaranteed trade-in value plan, Kirton said.

Staff reporter Matt DeLorenzo in Washington contributed to this story.

Kellogg emphasizes ground effects
Kellogg Manufacturing, Elkhart, Ind., goes in for heavy ground effects on its van conversions. Front and rear fiberglass spoilers complement the vehicle's exterior paint scheme, with the raised roof, built-in TV antenna, sunroof and sharply contoured design rounding out its contemporary look.

Big 3 plan for bigger share of van-conversion market

TRUCKING TRENDS

JOSEPH BOHN

The lucrative van-conversion business has attracted the attention of Detroit automakers who would like a bigger piece of the action.

Some industry reports say that when the automakers redo their full-sized vans in the early 1990s, they're going to put all the fasteners and other components on the inside, as they do with minivans.

That will give them more flexibility to create different interiors as the vans come down the line — edging them farther into the van-conversion market.

"That's a 200,000-unit market they're not getting any part of right now because of the way their cargo vans come down the line," one observer pointed out.

The best guess is that the manufacturers are likely to knock out quite a few of the small converters, leaving the low- and high-priced ends of the market to well-established conversion firms.

General Motors and Chrysler Motors will be the first to introduce new full-sized vans in 1990-91, followed by Ford shortly afterward.

Suburban's future

GM isn't sure whether — or how — to replace its aging Chevrolet/GMC Suburban and Crew Cab models.

The company is studying choices that include creating totally new Suburbans, Crew Cab pickups and Blazers/Jimmys off its new C/K pickup platform; dropping some or all of those existing models; or continuing to produce some in combination with new models.

GM's full-sized vans fall into a totally different category than any of those vehicles because they use unibody construction.

The company couldn't build a new Suburban derivative from its new full-sized vans unless it went to a frame version of the van.

GM is now building Suburbans off the leftover Crew Cab pickup — a remnant of its old-style pickups.

Reportedly, company officials believe they don't need the Crew Cab any more because the new extended-cab model in the C/K series is adequately taking care of those customers.

The Crew Cab is reportedly due to be dropped. At the time GM moved Crew Cab production to Janesville, Wis., officials said the model would be produced until July 1989.

If GM drops the Crew Cab, the only model it will still need that tooling for is the Suburban.

Industry observers point out that the tooling on the current Suburban is pretty well worn out, as evidenced by its fit and finish, which requires a lot of cleanup after production.

The Suburban itself also has a rather rough ride.

GM officials reportedly don't like the high costs of building and maintaining the vehicle at its plant in Flint, Mich.

And the cost of bringing out a new Suburban will be immense because the vehicle will require basically all new tooling, and it will have to be brought into line with the automated assembly and manufacturing processes GM is now using in other plants.

Ford reportedly spent $500 million for its upcoming four-door Bronco II, due in the mid-1990 model year, and that was just for the frame and some related componentry.

Ford will be able to use many of the parts from the two-door Bronco II to produce its new four-door model. But in GM's case, the Suburban will require totally new components from the ground up.

Regardless of what GM finally decides, it will not abandon the Suburban market, even if sales of that vehicle continue to drop.

Combined Chevrolet/GMC Suburban sales were 77,072 last year, off from 81,207 in 1986.

It appears that the auto companies now have the flexibility to produce vehicle lines profitably in low volume.

In the past, they would frequently leave low-volume vehicles to private conversion firms and other outside companies to product.

But industry sources said the auto companies now appear capable of profitably producing vehicles with sales as low as 40,000 or 30,000 units annually.

Van conversions enjoy a boom

But smaller dealers say they've been hurt by new GM policy

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The spring van-conversion market is booming, fueled partly by buying incentives.

However, GM's program of limiting drop shipments of seat-delete vans only to dealers who order at least 100 of them has hurt a lot of small Chevrolet and GMC outlets of non-pool converters.

GM extended its $500 rebate on full-sized G vans through May 11. Chrysler is offering $1,000 rebates on its full-sized vans indefinitely, and Ford is offering $500 rebates on Aerostar vans through May 11.

"Business is so good, it's almost caught us (the Elkhart, Ind., conversion community) off guard," said William Snook, president of Coachmen Vans and Consolidated Leisure Industries.

"When the weather broke, sales picked up to the point where there were not enough chassis to fill orders," Snook added.

Supplies of Ford and Chevrolet vans are the tightest.

"Every guy in town is in the same situation. We wish we had more chassis. Business was kind of slow, and then it really opened up," Snook said.

GM's restrictions on drop shipments forced some converters to switch supply sources and cut others off totally.

In Romulus, Mich., Robert Wolf, president of Advanced Creations, said GM's program has hurt every non-consignment pool converter.

That's because "sales are tremendous, and we are fighting for every chassis right now," he said.

Wolf, who primarily converts Chrysler and Ford vans, has seen his GM conversion business dry up since GM's program went into effect in January.

He theorized that GM was trying to protect its consignment pool converters from regional converters who were not building units according to government standards.

"But a lot of us (non-consignment-pool converters) belong to the Recreation Vehicle Industry Association. Even though we're not in the GM pool, we do things according to Hoyle," he added.

GM sources say, though, that restricting drop shipments was intended to provide the company with an order bank and to balance its year's production of vans.

It was intended to better control distribution of the non-bailment pool vans for the upfit market.

But, in reality, it has distorted the market and hurt smaller dealers who typically ordered limited numbers of chassis for non-pool converters.

Dennis Hite, new-car sales manager for Mark Chevrolet, Wayne, Mich., called it "an extremely dumb program." He said, "They did it to try to eliminate the big dealers who were running through hundreds of units on a fleet basis and selling them to conversion companies.

"But, in reality, it's only made the Paul Sherrys (Paul Sherry Chevrolet-Chrysler, Piqua, Ohio) and the Jim Johnsons (Jim Johnson Chevrolet, Richardson, Texas) stronger," he said, citing dealerships that sell several thousand van chassis yearly.

"It has given those guys more strength," Hite said. "I sell 120 a year. I could step up and order my 100; but in March and April, they would trickle in. In June, I'd get a few more and, guaranteed, by buildout time in July/August — when you don't want chassis; you want to have your inventory all set — I'd get 30 or 40.

"This program has eliminated me from using local conversion companies," said Hite. He previously supplied Advanced Creations, but said he can't anymore because "I can't get the empty chassis."

Hite said he is now forced to use bailment pool converters because, under their arrangement with those converters, the auto companies floorplan the cost of the chassis until they are converted and sold back to the dealer.

Hite said that with non-consignment pool orders, he risks floorplanning the cost of the vehicles himself.

RV wholesale shipments up 5% for 1987

TOTAL ALL RVs	30,800	31,200	– 1.3	30,800	31,200	– 1.3

Source: Recreation Vehicle Industry Association

Total RV wholesale shipments increased 5.45 percent in calendar 1987 to reach a nine-year high of 400,200 units.

The wholesale value of those shipments was a record $6.84 billion, up 10.85 percent from $6.17 billion in 1986, according to the Recreation Vehicle Industry Association's wrapup and analysis of industry results.

Average wholesale prices advanced moderately for almost every RV category with most groups in the 5 percent range. Type B van campers increased the most over 1986, while the average wholesale price of conventional travel trailers was slightly lower than a year earlier.

The value of van-conversion shipments rose a strong 5.84 percent. The industry shipped $3.116 billion worth of van conversions, up from $2.944 billion in 1986.

The average wholesale-unit price of a van conversion was $17,131, up 5.83 percent from $16,187 a year earlier.

California was the biggest market for van conversions. It accounted for 12.55 percent of van-conversion shipments, followed by Ohio with 7.81 percent and Illinois with 7.52 percent.

Michigan accounted for 6.68 percent of the van-conversion shipments; Florida, 6.85 percent; and Texas, 5.15 percent.

The East North Central region, comprising Illinois, Indiana, Michigan, Ohio and Wisconsin, accounted for 27.57 percent of the van-conversion shipments.

That was followed by the South Atlantic region, made up of Delaware, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia and West Virginia, which accounted for 18.50 percent of the shipments.

Behind that, the Pacific region, including Alaska, California, Hawaii, Oregon and Washington, accounted for 15.52 percent of the shipments.

California was again the top state for overall RV shipments, accounting for 14.14 percent of all RVs shipped.

Florida gained runner-up standing last year by accounting for 6.14 percent of all RV shipments, while Michigan slipped a notch to No. 3 with 5.77 percent.

Meanwhile, industry unit shipments topped 1986 levels in all but one month, with five of the 12 months being the highest in the past decade, the association said.

April was again the year's highest shipment month, as it has been for the past four years, with deliveries to retailers topping 40,000 units.

First-quarter shipments of 102,200 units were 4.00 percent better than in 1986, buoyed by increased shipments of conventional travel trailers, truck campers and type A motor homes. Van-conversion shipments were off during the period.

RV wholesale shipments showed less of a seasonal variation in quarter-to-quarter results last year. While actual second-quarter shipments increased to 112,600 units, they were down 10.20 percent, seasonally adjusted, from the first quarter.

Second-quarter results were the best quarterly total since the same period in 1984, the association said.

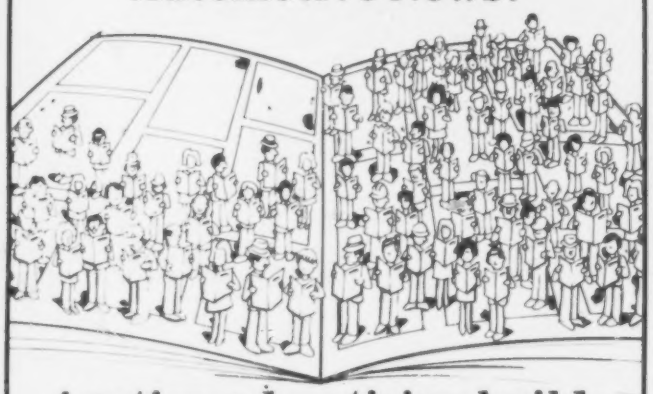
Deliveries in May, June and July closely followed the pattern set in 1986 and allowed the industry to catch its breath for the strong third quarter when shipments increased more than 10 percent on a seasonally adjusted basis.

The first half of 1987, in fact, ran at a seasonally adjusted rate of nearly 440,000 units with five of the six months recording nine-year highs.

The results were capped by a surprisingly strong December that came six weeks after the stock market plunge.

AUCTION DIRECTORY

Why rely on word-of mouth when you can build a crowd in the back of Automotive News?



Auction advertising builds strong auction traffic.

You can get spirited bidding, higher prices and more cars sold when you advertise your auction in Automotive News Auction Directory.

Because the Automotive News Auction Directory is read by exactly the people who attend your auctions. In fact, Automotive News goes to virtually every dealership in the country. Why settle for a small local attendance when you get a big regional — or even national — attendance with an ad in the Auction Directory.

Call Marie Hingst at (313) 446-6065 and you'll do business in the back of Automotive News.

Tougher odometer law supported

Officials from Metro Auto Auction in Kansas City, Mo., and Anglo American Auto Auctions, based in Nashville, Tenn., testified before the Missouri Senate Transportation Committee recently in support of a bill to toughen state odometer laws.

Gary Dickinson, vice president of special services for Anglo, told committee members that auctions and retail dealers are at the mercy of state titling procedures.

He said some states with lax rules about putting correct mileage figures on titles make it easy for odometer spinners to obtain titles with incorrect figures.

"The clocker is able to present a valid, negotiable Missouri title, and neither the dealer nor the auction can tell that it has been clocked," Dickinson said.

The bill would require the Missouri Department of Revenue to maintain mileage readings on business vehicles. If an odometer discrepancy arose, the department would be required to alert the car buyer by branding the title.

Manheim expands

Atlanta-based Manheim Auctions has opened its Riverside Auto Auction in Riverside, Calif. Robert Mowers is general manager.

AUCTION BRIEFS

CHARLES THOMAS

The new facility brings to 18 the number of auctions owned and operated by Manheim, a division of Cox Enterprises. Manheim operates two other California sales — the California Auto Dealer's Exchange in Anaheim and the Fresno Auto Dealers Auction.

U-Haul sales increase

Sales of U-Haul International's fleet of 50,000 vehicles through Nashville-based Anglo American Auto Auctions have topped 700 vehicles in 12 weeks. A company official said U-Haul sales increased 24 percent from the first month to the second and 14 percent from the second month to the third.

"We're seeing the U-Haul vehicles selling well at all our locations, especially at our three largest commercial vehicle auctions in Dallas, Atlanta and Fort Wayne," said Bob Lalain, Anglo American national sales director.

"We expected that it would take us six months to hit full stride with this program, but we are ahead of target."

The five-year program marks the first time the national do-it-yourself moving company has used auctions to rotate its fleet.

About 10,000 vehicles will be sold through Anglo's 20 locations in 1988 including: F-350 trucks with one-ton chassis and aluminum van boxes measuring 14 feet; several varieties of Ford F-600 trucks with two-ton chassis and aluminum boxes measuring 12 feet, 16 feet, 20 feet and 24 feet; 1984 and 1985 Southwind motor homes; and 1985 27-foot Alumalite motor homes.

Vehicles are sold at dealer-only sales and in special public sales in auctions held in Atlanta; Fort Wayne, Ind.; Dallas; and San Francisco.

Dealers are alerted through direct mail, telemarketing and point-of-purchase advertising.

SPRING SEASON SPECIAL SALES

WEDNESDAY, APRIL 6th — MERCURY LINCOLN — 400 CARS 10:00 AM

THURSDAY, APRIL 7th — ISUZU 80 CARS OPEN TO ALL BUYERS

WEDNESDAY, APRIL 13th — GM — 500 CARS 10:00 AM

THURSDAY, APRIL 21st — THE HOME TEAM HAT DAY

WEDNESDAY, APRIL 27th — GM — 500 CARS 10:00 AM

Every Thursday Over 1400 Cars (INCLUDING)

600 FLEET - LEASE - REPOS
F.M.C.C. G.M.A.C.
P.H. & H. G.E.C.A.L.
1st Atlanta
Security Pacific
Key Capital

EVERY THURSDAY IN APRIL
BUY 5 CARS - RECEIVE $50.00 CASH
CONSIGN 7 CARS & SELL 5 CARS - RECEIVE $50.00 CASH

PRODUCTION

Easter break slashes car, truck output

By Karen Detkowski
SPECIAL CORRESPONDENT

The four-day Easter work week reduced the number of cars scheduled to be built to 116,130, 21.44 percent below the previous week's 147,821 and 29.77 percent below the year-ago week's 165,348.

So far this year, 1,671,175 cars have been assembled, 23.25 percent behind the 2,177,404 built last year at this point.

Companies split last week's targeted build as follows: General Motors, 47.81 percent; Ford Motor Co., 25.12 percent; Chrysler Motors, 15.89 percent; Honda of America Manufacturing Inc., 4.46 percent; New United Motor Manufacturing Inc., 2.24 percent; Nissan Motor Manufacturing Co., U.S.A., 2.02 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.35 percent; and Volkswagen of America, 1.11 percent.

No overtime was scheduled last week. All plants except Honda and NUMMI will be closed today in observance of Martin Luther King's birthday.

This month, GM's Fiero plant in Pontiac, Mich., will operate four-day weeks so that workers can train for new jobs. The plant will close at the end of the model run.

Ford's Edison, N.J., plant, which had been idle for model changeover, will resume production tomorrow.

The last Volkswagen Jetta was built in Westmoreland, Pa., last week; the plant shuts down today for changeover. It will return on May 9, building only the 1989 Golf. The plant will close permanently on July 21.

U.S. truckmakers scheduled 66,370 units last week, down 24.98 percent from the previous week's 88,469 and 9.52 percent below the year-ago week's 73,352.

So far this year, truck output totals 1,081,081, 6.14 percent above the 1,018,538 assembled last year at this time.

Ford has slated overtime this week at its Wixom and Wayne, Mich., car plants and at its truck plants in Kansas City, Mo.; Norfolk, Va.; and Louisville, Ky.

Four-day week cuts production in Canada, too

Canadian automakers planned to build 22,008 cars last week, 16.72 percent below the prior week's 26,426 cars, but 63.64 percent above the year-ago week's 13,449 when three General Motors plants were down.

Assembly plants worked only four days last week.

So far this year, 286,896 cars have been produced, 18.96 percent above the 241,172 built last year at this point.

Truck output was scheduled at 15,074 last week, 24.59 percent below the previous week's 19,989 and 14.83 percent below the year-ago week's 17,698.

Year-to-date, 245,679 trucks have been assembled, 11.32 percent more than the 220,693 completed last year at this point.

Nissan speeds shop pact

Will serve dealers accused by Adesco

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Nissan Motor Corp. in U.S.A. must set up its own extended service contracts unit faster than expected to handle contracts sold by about 50 dealers. Nissan's vendor, Oklahoma-based Adesco Corp., has accused those dealers of fraud in filing excessive claims for parts and service.

Nissan expected to take control of all its dealers' extended service contracts when Adesco's contract expires in September. But a lawsuit in U.S. District Court for the Central District of California has accelerated its plans.

To win a temporary injunction prohibiting Adesco from terminating more than 175 Nissan dealers across the country that Adesco says filed excessive or fraudulent claims, the auto importer agreed in federal court last week to administer the extended service contracts sold by those dealers that Adesco says are the worst.

"Nissan management has indicated they will have the capability of handling service contracts for the 50 dealers within the week," said attorney Randy Huff, outside counsel for the auto firm.

The company hired Adesco to insure and administer the Security Plus Plan offered by Nissan to owners of new vehicles and certain used vehicles.

Most automakers have their own extended service contract plans, and Nissan says it will take the Security Plus Plan in-house when its agreement with Adesco expires.

Meanwhile, the battery of lawsuits between the two companies has hurried that process. It also has

OUSTED

Mecham's troubles hit dealership, workers, too

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

GLENDALE, Ariz. — At 2:30 on a blistering afternoon, mechanic Gary Maniag is sprawled in a chair in Service Manager Bill Jordan's office at Mecham Pontiac. Nobody's upset by his inactivity. Maniag stretched his work out as much as possible, but even with most of the service bay hoists unused, there are no cars left and it's too early to go home.

And even when he does leave, there won't be any milk-on-the-way-home stops. The last time Maniag wore his Mecham Pontiac uniform into a convenience store, one of the plentiful political foes of his boss, now-impeached Arizona Gov. Evan Mecham, cursed him loudly.

"I can't repeat what he called me," Maniag says, nodding in the direction of Peg Drager, the dealership's warranty specialist.

Whatever it was, it is unlikely to have offended Drager, a former policewoman who once killed an armed suspect who pointed a gun at her and her sergeant.

Like all the 76 remaining employees at Mecham Pontiac, both have the wary look of siege survivors.

The economics of a dealership wilting under the political firestorm of simultaneous recall and impeachment of the owner are a hardship.

When Maniag did his 1987 tax return, he reported his wages had fallen $17,000 in a single year. Like most Mecham employees outside of the clerical staff, his income is tied directly to volume.

Mecham Pontiac-Renault license plate, top, will become obsolete when the store's sale becomes effective May 1. Evan Mecham is shown above.

Several workers said all departments are down 75 percent since 1986.

Why stay amid the turmoil, the losses, the frustration and personal embarrassment?

Maniag shrugs and answers quickly, unwilling to analyze the question.

"It's still a good place to work," he says.

But there are occasional outbursts.

"Sadness, anger, frustration," one longtime employee said. "Sometimes I feel we all have been cheated."

Word that the 38-year-old family-owned dealership has been sold to Kemp Biddulph, the neighboring Oldsmobile-Honda dealer, came on the heels of Mecham's impeachment last week, the first U.S. governor in 59 years to be removed from office by that process.

Biddulph's pledge to retain as many of the employees as possible is welcome news, but most are unwilling to openly express hope.

"We've lived with uncertainty so long, we just don't dare say anything positive too

UAW wants Chrysler ban on plant sales

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

KANSAS CITY, Mo. — The UAW plans to ask Chrysler Motors for the gains it won in General Motors and Ford Motor Co. contracts last year, plus — in the wake of the near-sale of Chrysler's Acustar parts subsidiary — a guarantee that its plants won't be sold.

If successful in this spring's talks, that would give the UAW a moratorium on plant closings and plant sales by Chrysler — as well as the strong job assurances won by the Big 2 in 1987 talks.

The 190-member UAW national Chrysler council last week voted to demand a contract patterned after those at GM and Ford. The new Chrysler pact would expire on the same date as the others — Sept. 14, 1990.

The pattern agreement would give workers a bonus of 3 percent of their earnings for the next two years instead of base-wage increases. It would guarantee the jobs of the entire workforce except in the case of sales declines. The new pact would cover about 70,000 Chrysler workers including about 6,400 on salary.

During the council's contract strategy session, it was learned that the UAW has made an important inroad in organizing salaried workers at Chrysler, a gain that will spearhead further salaried-worker organizing.

The UAW has organized a group of 45 office workers at the Sterling Heights, Mich., assembly plant. They are the first white-collar salaried workers at Chrysler to join the union as a new unit in about five years.

Since workers throughout the industry are feeling threatened by the automakers' cost-cutting measures, job guarantees are particularly important to Chrysler salaried workers. Chrysler announced it wants to cut its salaried workforce by 3 percent in each of the next three years.

The UAW wants workers at Acustar plants to get the security and benefits of the new agreement. President Owen Bieber said that negotiators will try to salvage the four Acustar plants Chrysler wants to close and that protection will be sought for workers there.

But Bieber told delegates those four plants are similar to plants GM and Ford marked for closure before negotiations. Those were excluded from the job guarantees, though workers there are covered by other parts of the contracts.

At the last session of the council, members voted

BETTER DAYS

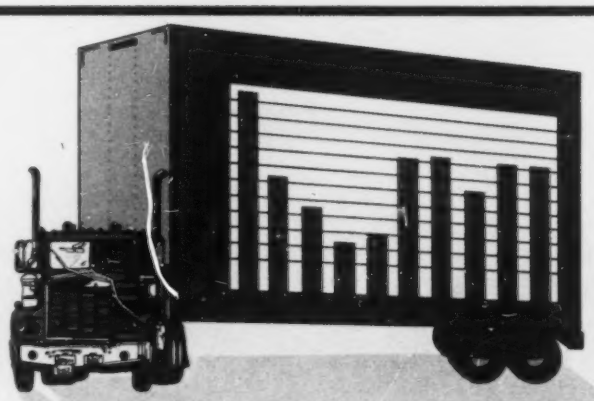
Big-truck market is tough, but dealers report progress

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RENO, Nev. — Although the medium/heavy truck market is still facing many of its familiar problems, the outlook for dealers has improved markedly compared to recent years.

Dealer net profit as a percentage of sales, for example, is currently 1.8 percent, the same as at the end of last November, according to the National Automobile Dealers Association's Bob Young.

Even better news is that, with sales up, most dealers



Stempel, Spethmann open World Congress

DETROIT — General Motors President Robert C. Stempel and Dieter Spethmann, chairman of the executive board of Dusseldorf-based Thyssen AG, will be the keynote speakers at this year's Automotive News World Congress.

The Congress, the 13th annual, will be held July 17-20 at the Westin Hotel in Detroit's Renaissance Center. The event will open with a Sunday night dinner, after which Stempel will speak about the State of the Industry from a manufacturer's perspective and Spethmann will address the State of the Industry from a supplier's standpoint.

In all, more than 30 speakers will make presenta-

Dealer tests workers for drug usage

YAKIMA, Wash. — Ten employees at Valley Ford-Toyota will enter drug rehabilitation or counseling programs as a result of the dealership's drug-testing program.

General manager Dave Thomas said the testing was prompted by his concern about the city's drug problem. Yakima has a population of just under 50,000, and Thomas called it a major U.S. center for the drug trade. The city is about 140 miles southeast of Seattle.

"We are no different than any other business. All have a prevailing drug problem. I wanted to know the extent of ours," he said.

Of the dealership's 100 employees, nine showed evidence of marijuana use and another showed positive for cocaine. In addition, two employees admitted having an alcohol problem — even though they tested negative for alcohol. They asked for help and have entered rehabilitation programs, Thomas said.

The dealership, Thomas said, will follow up on the drug testing with random checks. Any employee who tests positive for drugs a second time will be fired. Employees who abuse alcohol, however, will be judged on a case-by-case basis.

"Alcohol is not against the law, society accepts it . . . drugs will not be tolerated," Thomas said.

An employee who tested positive for alcohol was not required to enter rehabilitation. It was determined he had consumed the alcohol the previous evening.

Asked if employees would have been fired had they refused to take a test, Thomas said, "Fortunately, I didn't have to cross that bridge. I can't speculate on that."

However, at least one employee objected to the testing.

"I think it's a bunch of crap," said an employee, who did not wish to be identified. "It's giving the wrong impression of the place (where) I work," he said.

But other employees supported the testing. "Hopefully, it will weed out some bad apples," said Paul Koreski, an assistant manager in the service department.

The testing was conducted at Yakima Valley Memorial Hospital.

Tampa club offers dealer referrals

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

AAA Peninsula Motor Club in Tampa, Fla., has joined the list of wholesale companies offering its members huge discounts on new cars and trucks under a system that uses Florida dealers to supply the vehicles.

Since launching the program in November, AAA Peninsula has signed 107 dealerships and sold about 800 vehicles in west Florida. Represented are 13 domestic makes, 20 imports and 830 models, the club said.

Kevin Bakewell, director of public relations for AAA Peninsula, said the motor club and insurer asked its 880,000 members in a survey what services they most desired. Hassle-free auto purchases headed the list.

AAA Peninsula is an affiliate of the national American Automobile Association. Hence, other clubs are monitoring the success of the program for possible implementation, said Bakewell.

Other companies with similar systems include Amway Corp. of Grand Rapids, Mich. (Automotive News, Nov. 16) and Sam's Wholesale Club, whose parent company is Wal-Mart Stores (Automotive News, Nov. 9).

Amway, the wholesale purveyor of soap, car wax and other household products, markets cars at $150 above invoice under a system that uses Ford Motor Co., General Motors and Chrysler Motors dealers to supply vehicles.

It claims a network of 1,500 auto dealers in 26 states and eventually plans to expand to 35 states. It boasts that it has 750,000 distributors — all potential car buyers — and an unknown number of customers.

Sam's has an outlet in Orlando, Fla., that uses the system to sell cars to its members by referring them to preferred dealers. Cars sell for $100 over invoice.

Bakewell said the price negotiated between AAA Peninsula and

GM's cut-rate loans cost $876 million

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

Cut-rate-loan incentives cost General Motors $876.54 million in 1987, down significantly from the peak incentive year, 1986, when the programs cost GM $1.3 billion.

In 1985, the year GM began using widespread loan incentives, the cost was $276 million, according to information disclosed in GM's Form 10-K annual report filed with the Securities and Exchange Commission.

The finance incentive costs were in addition to $1.35 billion spent on advertising in 1987, up from $1.12 billion in 1986 and $1.04 billion in 1985, the report disclosed.

Under its low-rate retail finance programs, GM pays an interest rate differential to its financing subsidiary, General Motors Acceptance Corp., according to the SEC filing.

The payments are included in unearned income by GMAC and recognized over the life of the various retail sales contracts. The amounts recognized by GMAC accounted for 7.3 percent of its gross financing revenue on 1987, 10.9 percent in 1986 and 3.1 percent in 1985.

GM also disclosed in the 10-K that GMAC purchased $256.4 million in data processing and services from Electronic Data Systems, another GM subsidiary.

Other related-party transactions disclosed in the 10-K included GM Hughes Electronics Corp.'s purchases from other GM units. They included computer systems services from EDS of $171.5 million in 1987, compared with $102.5 million in 1986 and $59.2 million in 1985.

GM Hughes also paid $13.6 million to GM for common administrative expense in 1987, compared with $26.5 million in 1986 and $24.5 million in 1985.

EDS revenues from its contract with GM amounted to $2.88 billion in 1987 and are expected to be $2.9 billion in 1988, the report said.

It also disclosed that during 1987, GM was sued four times by the federal EPA for alleged violations of the Clean Air Act and twice by the Ohio EPA for alleged violations of the Resource Conservation and Recovery Act.

The federal complaints involve the Lordstown, Ohio; Framingham, Mass.; Arlington, Texas; and Shreveport, La.; assembly plants with total potential liability of $775 million, according to information in the SEC filing.

GM has countersued the EPA over the Arlington complaint, seeking "declaratory and injunctive relief."

The two Ohio actions involve Fisher Guide operations in Columbus and the Harrison Radiator plant in Moraine.

Ohio has offered to settle the Fisher Guide suit for $120,000, GM disclosed, although penalties in the Harrison Radiator suit could exceed $100,000.

Buick boss denies plan to cut Regal sticker price

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Buick has denied a report that it is considering a reduction in the sticker price of the Regal.

Edward Mertz, division general manager, said there was a "misunderstanding" about Regal's pricing strategy in a recent Detroit newspaper report. While Regal pricing was designed to meet the competition with more content and modest option discounts, there was a perception by the public that Regal was more expensive than its competition.

Buick has adopted a strategy of option-package incentives that has boosted sales in the past month. Mertz said it is the only type of selling incentive Buick is planning.

As the first of the GM10 cars to be introduced, Regal has drawn much attention. The redesigned, front-wheel-drive model has been on the road since last October.

But Buick may have been outmaneuvered in the annual pricing game that goes on in Detroit among General Motors, Ford Motor Co. and Chrysler Motors.

The base prices for the Regal Custom, $12,449, and Regal Limited, $12,782, were set to bring the cars into head-on competition with Ford Thunderbird and Mercury Cougar. However, Ford's pricing turned out to be $600 less than Buick estimated for the 1988 models.

That meant Buick had to react. That move was made in early March in the form of option-package discounts.

A problem arose early when potential consumers perceived the car as costing $2,500 more than the actual sticker price when equipped with the popular options, Mertz said. Those buyers pegged the car at $16,000 to $17,000 — not the approximately $14,000 when loaded.

So Buick initiated a series of option-package incentives, which ranged from $300 to $900. Mertz stressed that the items in the packages are those typically ordered by consumers as separate options and included air conditioning, power windows and tilt steering wheel.

Mertz said the new Regal has outsold the old model by a considerable margin.

For the current model year, 54,077 1988 Regals have been sold through March 31, compared with 26,115 for the 1987 rear-wheel-drive model. In the January-March period, 30,089 Regals were sold, compared with 11,579 during that period in 1987. Sales for March were 11,203, compared with 5,064 in the year-earlier month. Sales increased 10.14 percent in March over February's pace.

A Buick spokesman said the division is projecting "just over 100,000" Regal units out of a total Buick forecast of about 600,000 for the calendar year.

As for Regal cannibalizing the sales of other Buick models, Mertz said he did not see as much as some first thought. He also said there are 600,000 owners of rwd Regals and they are a prime target for the division.

Fleets are another good market. Fifteen percent of Buick sales are to fleets with 90 percent going to 10 major rental fleets. The Buick Skylark is "an aggressive fleet car" he said.

Sterling delays decision on fate of ad agency that seeks Saturn

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Austin Rover Cars of North America said last week that, at least for now, it will not sever its 11-month-old relationship with its advertising agency, Hal Riney and Partners, San Francisco.

Riney is one of three finalists for the $100 million Saturn advertising account. Austin Rover officials were not notified that the agency was pursuing the General Motors subsidiary's business until two weeks ago. Feeling betrayed by the late notice, the importer had said it was considering dismissing Riney as the agency for its $20 million Sterling car account.

However, that changed when agency chairman Hal Riney flew to Austin Rover headquarters in Miami last Monday and assured executives that the agency wants to keep the account. Raymond Ketchledge, Austin Rover Cars of North America president, said Riney made "certain reassurances" about the relationship.

Ketchledge said his company is taking a "wait-and-see" position on whether Riney will be fired if the agency lands the Saturn business.

Saturn has said it will not choose an agency with a conflicting automotive account.

Thomas Shaver, Saturn director of marketing services, declined to name the three finalists. However, ad agency sources say the other two are N W Ayer, New York; and Hill, Holliday, Connors, Cosmopulos, Boston. Industry observers favor Ayer to win because it holds GM's corporate advertising account.

U.S. deficit rises 10% in auto trade

By Geoff Sundstrom
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The U.S. automotive trade deficit in passenger cars and light trucks was up 10.5 percent in January, compared with the year-earlier period. The rise occurred despite a healthy 27.3 percent gain in exports over January 1987.

Trade numbers released by the U.S. Department of Commerce show a trade deficit of $3.702 billion for passenger cars and light trucks in January. Total car and truck exports for the month had a value of $652.5 million. The month's car and truck imports were valued at $4.354 billion.

Passenger-car exports in January reached 44,570 vehicles with an estimated value of $498.8 million. Light-truck exports for the month were 14,129 vehicles with an estimated value of $153.7 million.

Passenger-car exports to Japan were up several hundred units and exports to Canada increased several thousand units. Exports to other countries increased 4,261 units.

On the import side, South Korea, Mexico and Brazil continued to post big increases in car shipments, compared with January 1987. Both the value and quantity of car and truck shipments from Japan declined, compared with a year ago.

Total car and truck imports for January had a value of $4.354 billion, up 12.71 percent from the $3.863 billion in automotive imports shipped in January 1987. There were 451,545 finished vehicles imported to the United States in January 1988, compared with 416,902 in January of last year.

Passenger-car imports reached 379,779 units for the month with a value of $3.828 billion, while light-truck imports were 71,766 units with a value of $526.6 million.

The number of passenger cars imported from South Korea in January increased 160 percent from the year-ago period. Imports from Mexico were up 179 percent. Brazilian imports were 5,933 units for the month, up from 20 vehicles shipped in January 1987.

South Carolina ban on tent sales means higher prices, FTC says

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

The Atlanta office of the Federal Trade Commission said that a South Carolina law barring off-site tent sales by dealers harms consumers by increasing prices.

David C. Waldrop Jr., a South Carolina legislator who introduced a bill to allow tent sales, requested the opinion from the FTC staff.

In its response, the FTC staff said, "We believe that laws prohibiting off-site sales may prevent dealers from adopting the most efficient sales methods and restrict consumer choice in the purchase of new and used cars. Consequently, consumers may be forced to pay higher prices."

As an example, the FTC letter said current law prevents fleet dealers from holding used-car sales on credit union property.

"Since these sales entail low overhead, fleet dealers would be able to pass along savings to consumers," the staff said.

It added that the Illinois Credit Union League has estimated that credit union members pay an average of $1,118 less for used cars at such sales than through "conventional" channels.

The ban also affects new-car sales, the staff said. "For example, credit unions cannot organize new-car sales events at central locations, such as fairgrounds or shopping center parking lots," the FTC staff said. "Such events, which allow a number of dealers to offer vehicles to consumers at the same location, may result in savings to consumers."

The staff said that while the purpose of the tent-sale ban is to protect customers from deceptive practices, it believes other sections of South Carolina's law "address this objective in other ways."

The letter concluded. "We believe that unjustified limitations on off-site sales by automobile dealers are likely to increase dealer costs and decrease competition and therefore increase the prices consumers pay for motor vehicles. For these reasons, we believe that (Waldrop's measure), if enacted, would benefit consumers."

Virginia adopts 65 mph

RICHMOND, Va. — Virginia has increased the speed limit on its rural Interstate highways to 65 mph from 55 mph. It was the [illegible] state to do so.

Manheim boosts auction tally to 21 in U.S., Canada

Atlanta-based Manheim Auctions has purchased or opened four facilities since December, bringing the number of auctions owned by the company to 21 in the United States and Canada.

The company also has launched a capital-improvement program at several of its sites.

Manheim's most recent acquisition is Dealers Auto Auction in Grand Prairie, Texas, for an undisclosed amount.

Registrations for Dealers Auto Auction's Tuesday sale exceed 500 vehicles. It has 20 acres for parking and future expansion and also has a reconditioning facility. The auction specializes in bank repossessions and Ford Motor Credit sales.

Darryll M. Ceccoli, Manheim executive vice president, said the auction will develop its dealer consignment and repossession business.

In December, Manheim purchased Bishop Brothers Auction in Atlanta for an undisclosed amount. The auction specializes in dealer consignments and vehicles from utility companies. It registers about 500 vehicles each week at its Tuesday auction.

AUCTION BRIEFS

CHARLES THOMAS

In January, Manheim opened its multimillion-dollar Riverside Auto Auction in Riverside, Calif.

In March, Manheim reopened the beleaguered Oshawa Auto Auction in Oshawa, Ontario, after purchasing it in January for an undisclosed price. Manheim renamed it the Manheim Oshawa Dealer Exchange.

The Oshawa Auto Auction had closed in December when Lloyd's Bank in Whitby seized $1.5 million in funds, leaving about 150 dealers in the lurch. The bank had held the proceeds from several weekly sales. The auction then went into receivership until Manheim purchased it.

The auction registers about 500 vehicles for its Wednesday sale each week including repos and dealer consignments.

Meanwhile, Manheim's Florida Auto Auction of Orlando added two lanes, making is the largest in the country with 13 lanes. Manheim's Metro Milwaukee Auto Auction in Caledonia, Wis., will open two additional lanes in July, increasing the number of lanes from five to seven.

Manheim's NADE in Bordentown, N.J., will open its new reconditioning facility in May. That will give the auction — already a leader in dealer consignments — the capability of attracting fleet and lease, institutional and factory business.

Kruse goes to Europe

Kruse International has announced expansion of its classic-car auction sales to West Germany, Switzerland and Luxembourg.

The Indiana-based company held its first overseas sale April 1-2 in Dusseldorf, West Germany.

A private-collection sellout will be held April 15-19 in Switzerland. Kruse will hold a collector car auction in Luxembourg in November.

WHEELWAYS

LEASING INSURANCE— WHEELWAYS IS THE BUSINESS EDGE YOUR OPERATION DESERVES

As a leasing company you are challenged by many unparalleled business risks. Wheelways Insurance and Financial Services is a recognized innovator in designing and underwriting insurance programs and products for the automobile leasing industry. With the coverage you need and the individualized attention you deserve, Wheelways leads the way in providing cost and time effective features with every program. We eliminate costly finance charges by offering twelve monthly, interest-free payments. Reduce your premium by accumulating insurance credits based on your business's individual loss experience. All customer and vehicle information is maintained and controlled within our data resource bank. With service minded offices nationwide, you receive individualized attention from local Wheelways representatives. Experience Wheelways dedication, dependability and security — the business edge your operation deserves.

For more information complete and mail the attached coupon or call (215) 642-8400 today.

AN 4/88

Runaway-car dilemma

NHTSA reviews X-car decision for clues

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — As it tries to find the cause of sudden acceleration, NHTSA is reviewing the recent GM X-car court decision, which says that consumer complaints do not necessarily indicate a vehicle defect.

"The subject of sudden acceleration is a complex matter involving possible vehicle defects as well as the interaction of drivers and vehicles," said Diane K. Steed, NHTSA administrator, in response to a wide-ranging inquiry on the subject from Rep. John Dingell, D-Mich.

She indicated that the agency is studying the recent X-car decision to consider its implications regarding the investigation of sudden-acceleration complaints.

In quantifying the problem, she said that not all reports of sudden acceleration fit into NHTSA's definition of the problem.

"NHTSA uses the term 'sudden acceleration' to apply to reports of powerful, unwanted vehicle acceleration that began when the vehicle was stationary or moving slowly with an accompanying loss of brakes," Steed wrote.

She added that most of the cases occur when shifting from park. "In many instances, power output in these events has reportedly been sufficiently high to spin the drive wheels, the drivers reported a total lack of braking effectiveness, and the vehicles reportedly did not stop until they crashed or otherwise were prevented from moving," Steed said.

She said that while the majority of cases investigated by NHTSA fall into that category, "We have also received reports of other kinds of unwanted acceleration or change in engine speed, but we do not classify these reports as 'sudden-acceleration' incidents."

Steed indicated that some private groups and individuals have counted any incident involving an unexpected speed increase as a sudden-acceleration incident.

Including such incidents in the definition of sudden acceleration would make the definition too broad for one cohesive investigation, she said.

When NHTSA receives complaints on sudden acceleration and the complaints center on a single component — like a stuck throttle — Steed said the agency now classifies the investigation by that component rather than under the broad heading of sudden acceleration.

According to Steed, NHTSA has determined the following facts surrounding the cases:

- No passenger-car engine can produce the power required for sudden acceleration unless the throttle valve is fully or almost fully open. NHTSA believes that no electrical, fuel or other system malfunction can increase power output unless an adequate volume of air is introduced into the engine. Therefore, the defect must somehow be connected to the throttle valve.
- Applying the brake with moderate force will easily stop a passenger car under normal conditions, even if the engine is producing maximum power, if the braking system is functioning properly.
- Almost all vehicles investigated for sudden acceleration have hydraulic braking systems not dependent upon or affected by the electrical system.
- In a small number of cases, conclusive evidence demonstrates that drivers did inadvertently step on the accelerator pedal and continued to believe afterwards they had been pressing on the brake.
- Reports of sudden acceleration have been received for all groups of automatic transmission-equipped cars produced by all major manufacturers.
- Vehicle defects that may contribute to sudden acceleration have been found in some cases, resulting in safety-recall campaigns.

NHTSA said it believes that shift-lock systems, as installed by Audi and other manufacturers, "will prevent sudden acceleration under certain circumstances. In general, shift-lock systems appear to be beneficial, but it is premature to judge the extent of their effectiveness at this time."

The agency said it observed a significant reduction in the number of sudden-acceleration accidents involving Audi 5000 models since the shift-lock system began to be installed in late 1986. NHTSA is conducting an audit of Audi and Nissan recalls that installed shift locks.

Steed told Dingell that sudden acceleration is apparently a problem in Japan, Canada and Europe as well.

Steed concluded, "There is much public information to suggest that a substantial portion of the sudden-acceleration problem is caused by pedal error.

"While much of the technical evidence may support the inference that drivers have applied their accelerator pedals in many of the sudden-acceleration incidents, this by itself does not preclude the possibility that vehicle defects have contributed to the cause of these incidents to a degree sufficient to make such defects subject to recalls."

DINGELL

FROM PAGE 2

make the rulings a mockery and allow the importer too great a leeway.

"But if the referenced decisions are an example of how Customs interprets its regulations, then the rulings may, in fact, be a mockery in application at least."

In backing its position, the staff said that the original letter rulings with Suzuki were issued in 1984, while Mitsubishi's date back to 1985 and 1986.

The report concluded that the regulations provide for revocations or modification. It added, "But that must occur prospectively. You may want to urge revocation of the old rulings."

In addition to having Customs review its decision, Dingell asked the General Accounting Office to examine the matter.

"I also question whether such old rulings should, under the regulations, be allowed to continue indefinitely, particularly in light of the fact, as you point out, that these vehicles are being used in the United States as passenger vehicles. A revocation (or modification at least) appears to be in order now," Dingell wrote.

Customs has promised to review the matter and issue new guidelines subject to public comment, but as of late last week, had still to open a comment period on the issue.

Domestic-car supply declines to 58 days

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

The industry's inventory of unsold U.S.-built cars stood at 1,574,529 units on April 1, equal to a 58-day supply at current selling rates. It was the lowest days' supply since October and the lowest number of cars since November.

On April 1, 1987, the stockpile amounted to 1,945,438 units, a 74-day stock at the then-current rate of sales.

Industry stocks of domestic new cars totaled 1,608,461 units on March 1 this year, a 62-day supply.

Stocks have been trimmed by a variety of retail and dealer incentives. Also, Ford Motor Co., Chrysler Motors and General Motors closed plants during part of March for model changeover or inventory adjustments.

As a rule of thumb, a 60-day supply of domestic cars is considered optimal.

By company, inventories shaped up this way on April 1: GM, 51.35 percent; Ford Motor, 28.71 percent; Chrysler Motors, 15.55 percent; Volkswagen, 1.53 percent; Nissan, 1.15 percent; Honda, 0.97 percent; Toyota, 0.41 percent; and Mazda, 0.33 percent.

A month earlier, inventories by company were: GM, 51.05 percent; Ford, 28.75 percent; Chrysler, 16.49 percent; VW, 1.26 percent; Nissan, 1.13 percent; Honda, 0.77 percent; Toyota 0.32 percent; and Mazda, 0.23 percent.

The inventory by size class shaped up this way April 1: Intermediate, 42.90 percent; compact, 24.26 percent; standard, 18.79 percent; subcompact, 12.78 percent; and specialty, 1.27 percent.

A year earlier, size-class inventories were: Intermediate, 42.55 percent; compact, 23.65 percent; standard, 19.16 percent; subcompact, 13.37 percent; and specialty, 1.27 percent.

A slight drop was noted in Eagle Premier stocks, which fell to 133 days on April 1 from 143 days on March 1.

There was a more abrupt decline for Chrysler LeBaron K with a days' supply drop to 84 days from 119. Dodge Lancer stocks eased to 159 days from 190.

At Ford, as of April 1 there was a 60-day supply of Ford Probe, which goes on sale officially May 12. Dealers, however, have been selling the cars as they receive them.

The red-hot Lincoln Continental is in extremely short supply and an Automotive News analysis indicates there is only a 10-day supply of that car in dealers' hands or in transit.

At Cadillac, a look at stocks of Allante shows a 147-day supply, down significantly from 194 days a month earlier.

Also at GM, the supplies of GM10 cars remained low but healthy. The supply of Buick Regal was 78 days, up from 70 a month earlier.

The Oldsmobile Cutlass Supreme figure was 71 days on April 1, unchanged from March 1, and Pontiac Grand Prix was down to 42 days, from 51 days a month before.

March deliveries increase 7.57%

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

New-car sales in the United States showed a substantial gain in March, rising 7.57 percent above those a year earlier. Sales surged late in the month and were up a lusty 17.84 percent in the month's closing 10-day period.

Deliveries of domestics and imports totaled 733,738 cars for the month, compared with 682,117 last year.

Manufacturers are using everything in their tackle boxes as they fish for customers in this country's strong retail market.

The bait these days includes factory rebates in cash, cut-rate option packages, clearance discounts, first-time-buyer deals, bargain-basement financing programs, breaks for college graduates and even a U.S. savings bond as a premium from a Japanese company.

The lures are being floated in front of shoppers looking at cars, trucks and sport-utilities.

All of the domestic makers except Volkswagen and Nissan reported gains in March. Nissan had a significant falloff of 23.16 percent, while VW had a slight dip of 0.88 percent.

Toyota sales increased 49.41 percent as retail deliveries climbed to 5,162 units from 3,455 a year earlier. Mazda, which began building cars in this country in September, reported sales of 2,814 units for March.

Honda dealers sold 27.09 percent more U.S.-built cars this March than in 1987, and Chrysler Motors' dealers were up 14.28 percent. Ford Motor Co. dealers gained 9.78 percent for the month, and GM dealers advanced 2.44 percent.

Toyota's sales in the March 21-31 span rose to 2,883 units from 1,960 last year, a gain of 47.09 percent. Honda was up 22.78 percent; Ford Motor Co. climbed 18.10 percent; and General Motors' sales increased 17.38 percent.

Chrysler sales rose 15.54 percent, and VW reported a 15.38 percent gain during the 10-day selling period.

Nissan sales were off 14.05 percent, while Mazda's domestic-car sales totaled 1,511 units in the period.

There were 27 selling days in March this year, compared with 26 in March 1987. There were 10 selling days in the month's closing sales period this year compared with nine last year.

Chrysler Motors said March was a record month for Plymouth Sundance, Dodge Shadow and Daytona and Chrysler LeBaron coupes.

Ford Division said sales were the best for any March since 1979.

Acura recorded more sales in March than in any previous month.

PRODUCTION

Truck output hits quarter, March highs

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truckmakers cranked out more trucks in the first quarter of this year than in any previous quarter and in the process set a new monthly record.

Truck output for the three-month span totaled 1,079,887 units, surpassing the previous quarterly high of 1,009,342 in the second quarter of 1987.

First-quarter truck production was 8.24 percent higher than the year-ago quarter when 997,608 were produced.

March's truck output of 396,997 units was the highest production for any month, surpassing the previous record of 369,394 set in October 1987.

Last month's build was 12.94 percent more than February's 351,498 and 9.82 percent more than the year-ago month's 361,490.

Last week's scheduled truck output of 74,809 was an increase of 11.47 percent over the prior week's 67,113, but it fell 7.18 percent below the year-ago week's 80,594.

Car output during the first three months of this year totaled 1,700,404 units, a 18.18 percent decrease from the first quarter of 1987 when 2,078,179 units were assembled.

March production of 659,793 cars was 17.09 percent higher than February's 563,508, but it was 11.17 percent below the year-ago month's 742,780.

Automakers scheduled 133,820 cars last week, 5.60 percent more than the previous week's 126,723, but 17.67 percent below the year-ago week's 162,550.

Volkswagen of America's plant in Westmoreland, Pa., is idle for model changeover. It is scheduled to reopen May 9.

Canada posts truck records

Canadian truck manufacturers set a record during the first quarter of this year and also for March.

First-quarter truck output totaled 245,463 units, the highest output for any quarter. The total surpassed the prior record of 241,250 built in the second quarter of 1986.

First-quarter truck production was 23.14 percent more than the year-ago quarter's 199,337.

March output of 91,612 trucks was the highest for any month, surpassing the former peak of 86,525 set in April 1986.

Last month's truck build was 14.26 percent more than February's 80,177 and 23.11 percent more than the year-ago month's 74,415.

Car output for the first quarter totaled 288,485, the highest for that quarter since 1979 when 294,832 cars were built. It was 25.14 percent more than the year-ago quarter's 230,535.

March car production was 110,143, the highest monthly output since April 1986 when 111,533 cars were built, and the highest output for March since 1978 when 112,128 units were assembled.

Last month's car production was 19.82 percent more than February's 91,922 and 43.56 percent more than the year-ago month's 76,721.

Bricklin's import firm sold in $40 million deal

By John A. Russell
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Auto entrepreneur Malcolm Bricklin has agreed to sell his majority interest in cash-strapped Global Motors, importer of the Yugo and Proton Saga, to a Wall Street investment group in a $40 million deal that would bring new money to Global but would remove Bricklin from the business.

Global President William Prior, who apparently joined Bricklin in engineering the buyout to bring much-needed cash to the organization, would become chief executive and would buy 5.5 percent equity in the company along with chief financial officer Ira Edelson and other top managers. All would stay with the company and would receive stock options allowing them to buy up to 22 percent of the company later.

The change at the top and the cash infusion come at a time when Global is facing increasingly severe problems — expensive incentives and poor sales of the Yugo and high development costs for the Proton Saga, which Global intends to import from Malaysia in early 1989.

Yugo sales declined 35 percent from last year in the first quarter of 1988, and last week the research firm J.D. Power and Associates reported that 20 percent of Yugo dealers would consider dropping their franchises within the next year.

In an interview at his Colorado ranch last week, Bricklin said he plans to start a youth

GM drops two curbs on dealers

Public ownership, more stores OK'd

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors has changed its policy that restricted the number of GM stores one dealer could have and dropped its corporate opposition to public ownership of car dealerships.

Claude N. Moore, GM vice president of customer sales and service, said the policy changes are designed to give more autonomy to the marketing divisions. The changes will allow the divisions to more quickly and easily appoint quality dealers, he said.

"It removes the corporation as a judge and policy maker," Moore said in an interview last week.

The policy changes directly relate to a new emphasis on customer satisfaction and the customer satisfaction index, GM officials said.

"Bob Stempel has set the tone," Moore said of the automaker's president. "Customer satisfaction is the main goal that we all have."

The corporation notified all GM dealers of the policy changes in an April 8 letter from Moore.

Until March 1985, a dealer was allowed to be a dealer-operator in just one dealership although he could be an investor in up to nine more if there were buyout agreements.

In March 1985, that policy was liberalized to allow a dealer to be dealer-operator in up to five dealerships and an investor in up to five more.

Moore's letter said "recent experience has demonstrated" that even the modified dealer investment restrictions were "not necessarily appropriate in today's business climate."

Moore's letter also mentioned the review of the subject of public ownership of dealerships.

"Henceforth," the letter said, "each vehicle division will be in a position to consider proposals involving public ownership on a case-by-case basis."

In an interview, Moore said the policy changes are not related to the development of the new Saturn franchise. He also said he knew of no planned public stock offerings by GM dealers.

Reaction to the policy changes among dealers was favorable, although there did not seem to be any surprise because of remarks made by GM Chairman Roger B. Smith at the National Automobile Dealers Association convention in San Francisco last February.

At that time Smith said GM was

VW slices Brazil imports, blames soaring inflation

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Volkswagen United States expects to sharply curtail import of its popular Fox model because rising costs of exports from Brazil threaten to push the car out of the price-sensitive entry-level market.

The company plans to reduce production headed for North America by as many as 20,000 units over the next 18 months. Currently, about 80 percent of North American imports go to the United States and the balance to Canada.

The projection comes as raging inflation and other economic problems in Brazil have forced VW to pay more for the Foxes it buys from Autolatina, Volkswagen AG's joint venture with Ford Motor Co.

"If the car becomes non-competitive from a price point of view, your volumes are going to suffer," said a Volkswagen of America spokesman. He stressed, however, that even at anticipated lower volumes the car will be no less important to Volkswagen.

The development is a considerable setback to Brazil. Its auto exports are important revenue earners (about $320 million last month) as the country negotiates the rescheduling of its massive debts with Western banks.

The country's inability to control inflation — now around 20 percent a month — brings into question the future of sourcing entry-level cars from less developed countries, whatever the attractions of cheap labor rates.

VW introduced the Fox as its low-cost model in early 1987. Prices have been lifted three times since

Ford-Navistar pact eyed

Joint work, engine deal may be on tap

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RENO, Nev. — Navistar International took center stage at the American Truck Dealers convention, both as the focus of strong reports involving the industry's next major deal and by eliciting the strongest dealer concerns over factory practices.

Reports that Navistar and Ford Motor Co. may be close to a deal involving either a joint venture in heavy trucks or an acquisition by Ford of Navistar's 7.3-liter engine operations continued to heat up.

Nissan cuts car shipments to U.S.; 30% reported

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Motor Co. will cut its car shipments to the United States in order to reduce its high inventory.

Tetsuo Arakawa, executive vice president in charge of overseas marketing, said, "We have adjusted our shipments to match local sales conditions."

Arakawa would not comment on specific figures, but reports in the Nihon Keizai Shimbun newspaper indicate a reduction of about 30 percent, or a total shipment of about 200,000 units between April and September.

Under the formula for car exports to the United States administered by the Ministry of International Trade and Industry, Nissan is allowed to ship approximately 540,000 cars in fiscal 1988, which began April 1. The company fell short of its 1987 allocation of 541,778 by around 66,000 units.

Analysts suggest the company's goal appears to be a cutback of about 70,000 to 80,000 units for the first half, but exact figures might change during the following six months.

"It is necessary that we take steps to reduce current model inventories," Arakawa said. He added that it is a matter of course for any manufacturer to make adjustments to production volume when inventories rise.

Arakawa acknowledged that "our inventory levels in the United States are a bit high." At the beginning of this month, Nissan had a 96-day supply of cars, but the company expects to reach what it calls "normal" inventory by September.

Until that time, the company expects to face stiff competition in the U.S. market. Sales have been sluggish with a product line that was not changed last year and will not change this year until September.

In September, Nissan will start to introduce its 1989 lineup, which Arakawa said will include "several attractive models that we are confident will be favorably received by American consumers."

Nissan is expected to introduce new versions of the Maxima, 300-ZX and 200-SX. The new 200-SX is likely to be renamed and upgraded with a 3-liter engine.

However, that leaves untouched, except for possible facelifts, the Sentra and the Stanza, the two biggest sellers for Nissan.

Analyst Koji Endo of Nomura Securities said Nissan will "have a very small competitive edge in the U.S. market" this year. But Nissan is doing much better in the Japanese market compared with last year, he said, and right now the company's sales in the two markets "are almost even."

Nissan concentrated most of its new-model efforts last year on the Japanese market. The Bluebird, sold as Maxima in the United States, was redesigned. Sales are not doing as well as many analysts originally expected, but the car is doing much better than last year.

The biggest sales improvement for Nissan is in the top-of-the-line models — the Gloria/Cedric and the new, wide-bodied Cima that was introduced in January.

HOW JAPANESE QUOTA IS EXPECTED TO BE SHARED

Company	1988	1987
Toyota Motor Corp.	612,350	613,816
Nissan Motor Co.	540,500	541,778
Honda Motor Co.	423,850	424,865
Mazda Motor Corp.	226,100	226,661
Mitsubishi Motors Corp.	193,650	194,125
Isuzu Motors Ltd.	119,500	119,798
Fuji Heavy Ind.	106,800	107,062
Suzuki Motor Co.	60,250	60,397
Daihatsu Motor Co.	17,000	11,498
Total	2,300,000	2,300,000

Daihatsu allotment up

TOKYO — Daihatsu Motor Co. will get an increase in its car-export allotment to the United States for fiscal 1988, bringing its total to 17,000 units. That compares with 11,498 in 1987.

The increase of nearly 50 percent, arranged through the Ministry of International Trade and Industry, is smaller than the 100 percent jump anticipated earlier in Japanese news reports.

Official sources indicate the extra units for Daihatsu represent a reduction of approximately 0.24 percent for the eight other companies now exporting cars to the United States.

Lotus M100 debut set

U.S. sales slated to begin in early 1990

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

HETHEL, England — Group Lotus' new M100 two-seater will debut late next year — possibly at the Frankfurt auto show in September — and will come to the United States in early 1990.

Lotus Chief Executive Michael Kimberley also said that Lotus will homologate the new $150,000 M300 supercar for the United States. He said the 200-mph Etna prototype-based model will be introduced in late 1991.

Kimberley said Lotus Cars could have as many as 100 dealers in the United States by the time the M100 arrives in America — 15 more than was previously pegged for the launch. He said Lotus has considered and rejected distribution of the car through other retail networks in the United States.

Though Kimberley said he is distressed by the pound's recent strengthening against the dollar, he said it will not interfere with plans to launch the "entry-level" M100 in the United States.

He said the car will probably debut around October of next year, possibly turning up at the 1989 Frankfurt auto show. The M100 — almost certain to be named Elan — will then appear in the United States in early 1990.

Kimberley said the car will be sold through Lotus' wholly owned U.S. distribution arm, which it established in early 1987.

"Before we went down the route of setting up our own operation, I looked at every alternative," said Kimberley. "We looked at going in with other people, joint ventures, I looked at every cotton-pickin' alternative available.

"But hand-on-heart," he said, "I must say that the only one that can really work effectively for you when the chips are down is your own operation."

Kimberley denied recent rumors that Lotus is seeking an alternative distribution arrangement with another network — possibly American Isuzu.

"Not at all," he said. "The rumor I saw the other day about us possibly talking to somebody else about marketing the M100 is totally untrue. I'm committed to doing it ourselves. I've tried everything else. We're small and we can't cover everything and everywhere, but we don't need to and we don't want to. We can't be all things to all men in America."

American Isuzu has no plans to market the M100 or any other Lotus-badged vehicle, a spokesman for the Whittier, Calif.-based importer said.

Kimberley said Lotus currently has 71 dealers in the United States, up from 64 when it took over distribution.

"A Lotus is a very rare product to see in the U.S. and we want to keep it rare, but we've got to get coverage in some areas," he said.

Since taking over the distribution system, Kimberley said there have been 10 buy-sells within the network.

"The key is to have the network restructured and solidly in place for the launch of the M100," he said. "But it's very important that the dealers are able to cope with that increased traffic.

"That network is going to be retailing about 1,800 cars a year of the Elan-type," he said. "So the floorplanning and financial stock capability levels of the dealers have to be significantly uprated in certain areas."

The exact size of the dealer group at the time of the M100 launch is unsettled. "We've got some debate on that . . . whether it's going to be 85 or 100," he said. "It will probably be somewhere between the two.

"I'm not a great believer in large dealer numbers," he added. "In the U.K., we have only 28 dealers and this year we're selling about 600 cars retail."

After an analysis of the company's requirements in the United States, Kimberley said Lotus pegged seven open points — of which five have been filled — and another 17 "second-phase" open points.

"We're moving toward those second-phase open points and hope to have that completed by the time we're ready with the M100," he said. "We were very sparsely represented on the West Coast and (Lotus Cars USA President) Ron Foster is currently spending a lot of time in that area. We've just appointed some dealers in Los Angeles."

HIDDEN IMAGE HANS G. LEHMANN

Elan name will probably be revived when Lotus introduces M100 in 1989

Currency looms as a potential headache for the Elan. Kimberley called the present relationship of the pound and dollar "horrifying."

"It's constantly paring away the competitive advantage we have," he said. But Kimberley said delaying the launch due to currency rates is not an option.

Lotus pegs M100's price in the U.K. at £13,000-14,000. At current rates, that would be about $25,000 in the United States as the dollar has plummeted to near 1.90 against the pound of late.

Kimberley said Elan's total annual production run will be capped at 3,000, with the United States receiving 60 percent.

The new car is believed to have a front-wheel-drive layout, using a new 1.6-liter, 16-valve engine from GM's Isuzu affiliate in Japan. Kimberley would not confirm the fwd layout. But he said Lotus' tradition of excellent ride and handling will not suffer, no matter what the configuration.

"Lotus has done a lot of (engineering of) ride and handling of front-wheel-drive, front-engine cars, as well as other configurations," he said. A special Handling-by-Lotus package on the Isuzu Gemini is one example of front-drive, front-engine suspension engineering work by the British company.

Kimberley described the car as front-engine, with two body styles. It starts as a two-seat convertible and a hardtop will be added later. It will be offered only with manual transmission at first, but an automatic will follow.

The rumored Isuzu powerplant is thought to deliver 125 horsepower. A 16-valve 2-liter engine from Adam Opel is believed under consideration for one version, as is four-wheel drive.

"It will perform in exceptional terms," said Kimberley. "Its A-to-B times will be tremendous and ride and handling will be fantastic. It will perform very much like the previous Elan did, but uprated for the modern era. There will be a lot more room in the car."

Lotus' previous two-seat Elan went out of production in 1973, 10 years after its introduction.

Kimberley said the design is frozen. The M100 is thought to have been styled by Lotus' interior studio, headed by Peter Stevens. Proposals from Ital Design and GM's North American studio were reportedly rejected.

"I always hold styling competitions, and we'll continue to do that," said Kimberley. "I can only say that there's been input from a lot of very creative stylists."

Next up for Lotus is the $150,000 M300, based on the Giugiaro-designed Etna show car of a few years ago. Active suspension will be standard, and it will have a mid-mounted multi-cylinder engine.

Kimberley said about 150-200 will be produced annually. "We're going to homologate it in only two or three markets," he said. "It will have a passive belt system, air bags will be prohibitive, but we're aiming for it to be salable in the U.S.A."

Lotus is currently building six Esprits per day, but is scheduled to step up to seven per day later this month. Kimberley said the U.S. dealers are still undersupplied.

Lotus this year will produce about 1,150 cars, selling about 350 in the United States. Volume is expected to rise to about 500 next year, prior to the Elan launch.

Korea strike halts export of LeMans

By Oles Gadacz
STAFF CORRESPONDENT

SEOUL, South Korea — As the labor dispute at Daewoo Motor Co. drags into its fourth week, the company has canceled April exports of the Pontiac LeMans to the United States.

About 5,513 LeMans units were due to be shipped to the United States this month.

As of April 1, Automotive News figures show that Pontiac had 21,670 LeMans cars in stock in the United States, an 86-day supply.

With April shipments scratched, worries have now shifted to whether Daewoo will be able to meet its export commitments for May.

Many of Daewoo's Korean showrooms already are empty. Customers who placed orders during the third week of March, just as the strike began, are still awaiting delivery of their vehicles. According to one source, the company's order books show 9,000 customers awaiting delivery.

The strike has spread to all four of Daewoo Motor's plants as well as to its retail/aftersales network. Owners of Daewoo vehicles who rely on the company's service centers are beginning to complain about difficulties in getting replacement parts and having their vehicles serviced.

Like Korea's three other automakers, Daewoo looks after the marketing and service of Daewoo vehicles through its own nationwide network.

The financial toll of the strike is heavy and growing for the company and its workers. In a statement to local media last week, Park Kon-Woo, a senior executive with Daewoo Motor, said the work stoppage had already cost the company 45 billion won ($60 million) and that losses were mounting at the rate of 6 billion won ($8 million) per day.

Negotiations are deadlocked as workers stick to 11 demands that include higher allowances and a 26 percent increase in basic monthly wages. Management has not budged from its original offer on March 22 of 7.2 percent.

GM retiree leaves job to computer

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Three years ago, General Motors moved abruptly and deeply into the world of factory automation as a developer and producer.

It made acquisitions in rapidly developing fields of technology that were new to it as it acquired substantial interests in four machine-vision companies and a knowledge-engineering company and formed a joint venture in robotics.

Last week, the company reported what it called the first p. - off on those moves. It put the knowledge of a senior employee into computer software for use after that employee left GM.

Gerald L. Elson, GM's executive director of advanced manufacturing engineering, described the system at a conference at the Engineering Society of Detroit's International Programmable Controllers Conference.

It is a computerized diagnostic system called Charley — after Charley Amble, a recently retired Saginaw Division maintenance engineer. As Amble did, it can forecast when machines need maintenance or will need repairs. Thus, machine tool operating time will be increased, maintenance costs will be reduced and quality levels will be maintained, Elson said.

AUTOMOTIVE NEWS/JOE WILSBERG

Conference attendees view computer-integrated manufacturing

The system emulates the reasoning process Amble used after that thinking was captured through extensive interviews by knowledge engineers and converted to computer language.

Charley works by analyzing readings of a machine's vibration patterns, said Atul Bajpai, a development engineer.

"Each vibration pattern is unique, like a signature or fingerprint," he said. "The vibration signature is kept in a computer file and as new readings are taken periodically, they are checked against the file copy. When a change is observed, Charley tells maintenance people to take more readings, analyzes them and pinpoints the problem or potential problem."

Elson said GM, largely through attrition, has about 35,000 fewer salaried employees than in mid-1986. "We now have a tool to help us preserve experience," he said.

Problems Charley can diagnose include imbalance, misalignment, mechanical looseness and bearing wear and failure.

Elson said savings for one typical large manufacturing plant can approach $1 million a year.

He said GM is phasing Charley into its plants this year and is studying plans for making it available to the rest of industry. Project Charley was initiated by the advanced engineering staff and Saginaw Division. Knowledge engineering was handled under contract with Teknowledge Inc., a Palo Alto, Calif., company 11 percent owned by GM.

Audi 5000 carries discount of $4,000

AUTOMOTIVE NEWS STAFF ROUNDUP

Automotive importers fought declining sales last week by slapping consumer incentives on slow-selling models and offering dealers generous cash incentives.

Audi of America plans to send out certificates worth $4,000 to most Audi owners. The certificate can be applied only toward the purchase of a 1988 5000 model.

Also last week, Mitsubishi announced substantial cash awards for dealers and sales managers on many of its cars and trucks, including a sales managers' incentive that includes the 1989 Galant that has yet to go on sale.

AUDI: Audi of America is reviving steep discounts as it attempts to clear out inventory and make way for the successor to the Audi 5000.

Within the next month, Audi will mail about 400,000 certificates worth $4,000 off the price of a 1988 Audi 5000. They will go to all owners of pre-1988 Audi models.

Until that program begins, Audi will provide dealer incentives worth $2,500 on the car.

The new offer to current owners echoes a $5,000 discount that Audi ran last spring that drastically reduced bulging inventories. This year, though, Audi has only about 5,500 Audi 5000s remaining and will offer the deal to a broader group of owners.

If demand is anything like last year's, there will be shoppers who won't be able to find an Audi 5000.

"One of our motivations is to give the opportunity to build demand much in excess of supply," said Joe Tate, Audi's general sales manager.

Audi hopes to steer some potential customers to an Audi 80 or 90, its two newest models, Tate said. The company is currently offering up to $2,000 in dealer incentives on the 80/90 series in a program that runs through April 30.

The current $2,500 dealer incentive on the Audi 5000 will likely expire at the end of this month or in early May, Tate said. It will be replaced immediately by the $4,000 discount to current owners, which will be offered through Aug. 31. Dealers will be asked to cover $1,500 of that discount.

Audi is also raising the base price of its Audi 5000 models by 3 percent, effective May 9. With that increase, the lowest-priced 5000 model, for example, would climb about $665 and carry a $22,845 sticker.

Tate called it an interim increase that will be followed by another hike when the Audi 100 and 200 models hit the market Aug. 1. The price increase will partly reflect the cost of features that will become standard on the new models, Tate said.

CHRYSLER MOTORS: Chrysler Motors' Jeep-Eagle Division is offering a choice of a $750 rebate or low-interest financing on 1988 Eagle Premiers purchased or leased after April 1. The program has no expiration date.

Premier buyers may select the rebate or an 8.8 percent, 72-month loan. Those who lease a Premier may select a special Gold Key rate for leases up to 60 months.

The car must be financed through Chrysler Credit Corp. There is no dealer financial participation cost. Dealer sources said the Premier can be purchased from stock or ordered before May 15.

Jeep-Eagle is also offering dealer incentives on selected models and a spin-and-win game for salesmen on Premier.

The dealer incentive program began April 1 and ends May 20. It offers $500 on 1987 Comanche pickups; $1,000 on 1987 GTAs; $500 on 1988 Medallions; and $1,000 on 1987 Grand Wagoneers.

The game began April 1 and ends May 15. Salesmen win $50 to $1,000 on each Premier sold.

MITSUBISHI: Mitsubishi Motor Sales of America announced cash incentives on cars and trucks for dealers and sales managers.

Mitsubishi said sales of the 1989 Galant, which is scheduled to begin arriving at dealerships this week, will count toward the attainment of sales objectives in the sales managers' contest. The 1989 Galant, however, is not included in the dealer incentive program.

see INCENTIVES, page 58

Ford investigates ventures with Soviets

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. joined six other U.S. corporations in forming a trade group that could pave the way for Ford to begin selling vehicles in the Soviet Union.

The venture, called the American Trade Consortium, will explore the potential for joint business ventures with Soviet partners.

Ford would likely begin by exporting cars from Europe to the Soviet Union, said Phillip E. Benton Jr., president of the Ford automotive group. The relationship could evolve to the point where Ford would assist a Soviet organization in producing cars for domestic sale, he said.

Ford announced last year that, at the request of the Soviets, it had begun looking into opportunities in that nation. The consortium is expected to give answers to "a lot of the generic questions" about doing business there, Benton said.

Each company will pursue its own ventures. The other companies are Chevron, Eastman Kodak, Mercator Corp., Johnson & Johnson, Archer Daniels Midland and RJR Nabisco.

Benton said Ford sees an opportunity to tap into a growing automotive market. "In the so-called Eastern bloc today, there are about 3½ million cars and trucks produced for civilian use. We have absolutely no participation in that whatsoever," Benton said. He estimated that Soviet production will reach 5 million units annually by the early 1990s.

The first exports will likely be shipped from Ford of Europe, Benton said.

Early discussions have shown that the Soviets are most interested in cars about the size of the Scorpio, an intermediate sedan, Benton said. He expects their interests to be broader than that, however.

Benton also said that he sees the potential for Ford to ship "large" quantities of automobiles, but he would not specify a number. A spokesman, however, said, "I don't think we'd view 10,000 as a significant project."

WRANGLING:

Teen's soft-top Jeep starts door-lock war

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

Elizabeth Tozzi bought her dream car in February. But her mother wouldn't let her drive it.

Tozzi, 19, saved $6,500 for a down payment and bought a $13,000 1988 Jeep Wrangler soft top from Raritan Valley Garage, Raritan, N.J.

Although Tozzi is making vehicle and insurance payments, she said she is unable to drive it to her school classes in Manhattan or her job as a waitress. She said the vehicle is unsafe for urban or nighttime driving because the soft-top Wrangler has no door locks.

Roberta Tozzi, who initially refused to let her daughter use the vehicle at all, now permits Elizabeth to drive it for daytime errands. But she has begun a quest for door locks that has led to the dealer, Chrysler Motors and NHTSA because she considers the soft-top a "potential rape trap."

"The car is now sitting in our driveway and Elizabeth is having to borrow rides once again," said Roberta Tozzi. "There is no way any mother would subject her daughter to the perils of such unsafe transportation."

A Chrysler spokesman said that Jeep has never put door locks on soft-top or soft-door models.

"With soft sides, a canvas top and plastic windows, theft-wise a lock on the door would not stop somebody," the spokesman said.

Roberta Tozzi said the company has offered the family a hard-top Wrangler to replace the soft-top model.

Roberta Tozzi said the family did not realize the soft-top had no door locks until taking delivery. Tony Russo, an owner of Raritan Valley Garage, which sold the soft-top, said he tried unsuccessfully to install locks in the Wrangler.

Russo offered to buy back the vehicle but for $1,000 less than purchase price because the title had been transferred.

Roberta Tozzi said she has filed a complaint about the lack of door locks with NHTSA and noted that a competitive model — Suzuki Samurai — is equipped with locks. NHTSA officials said there is a standard for side door locks; however, it is designed to minimize the likelihood of being thrown from the vehicle on impact.

In a letter to Tozzi, Chrysler said that the vehicle is classified as an open-bodied, multipurpose vehicle and complies with all federal safety standards for that class.

In the meantime, Roberta's fiance has created a steel loop and cloth strap device to secure the vehicle doors from the inside. Although the device cannot be used for external locking, it will provide internal protection, he said.

European imports sing the blues in first quarter

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

As new-car sales in the United States climbed during the first three months of 1988, not every manufacturer let champagne corks fly in celebration.

To the contrary, for the Jan. 1-March 31 period, European imports found themselves at a loss — both in unit sales and in market share.

The losses hit both low- and high-line European automakers. The notable exceptions: Jaguar, Volkswagen and Sterling, all of which were able to increase their shipments of hot new models that had been in short supply.

While automakers and auto analysts tossed out varying reasons for the slump — from a weak dollar to consumers delaying purchases until after April 15 while they sort out the ramifications of the new tax law — few have fears that the decline will continue.

Theirs are guarded hopes that, should the European import market notch an overall sales loss in 1988, that loss will be minimal.

A few were more guarded about chances for a rebounding market.

"You should continue to see price increases come from both Europeans and Japanese through this summer," said Kahled Majeed, a market analyst with Drexel Burnham Lambert.

"Prices are a major, major reason" for the Europeans' sales woes, he said. "I don't see any of the price increases ceasing in the near term. All the effects of the weak dollar haven't yet been passed on to the consumer."

European importers are giving their all to help insure that this is a temporary sales trend. Nearly all have instituted programs to draw in buyers. Those programs include increased advertising, factory rebates, clearance discounts and long-term financing deals. Mercedes-Benz has even offered free air fare for European-delivery customers.

The numbers tell of European importers' problems. Their market share fell 1.04 percentage points, from 6.58 percent of the total car market for the first quarter of 1987 to 5.54 percent for the same period in 1988.

Unit sales in the first quarter this year numbered 146,749, off 6,375 from the previous year's total.

Peugeot: down 45.13 percent or 1,026 units

Some big losers in the January-March period: Peugeot, down 45.13 percent, or 1,026 units; Yugo, off 35.37 percent, with a 4,883-unit decline; Volvo, down 25.13 percent, or 8,101 cars; Porsche, off 24.50 percent, or 1,437 units.

Of all imports registering losses, Saab suffered the least, with a 9.02 percent decline, down 971 cars. Saab officials said salespersons' incentives, put in place from the beginning of the year on 9000-series sedans, helped Saab post its best March sales ever. Those incentives ended in late March.

Both of the high-end German manufacturers, Mercedes-Benz and BMW, suffered sales declines: 12.73 percent and 12.13 percent, respectively. Both Mercedes and BMW recently instituted lease programs to help lighten their days' supplies.

"The percentage of units the manufacturers are down would be an awful lot worse if they didn't have incentives," said a Mercedes-Benz, Porsche and Audi dealer in the Southeast.

Discounting at the dealership level has become more prevalent.

"What we have is European high-end products with a perceived high-end value," the dealer said. "Our buyers understand the dollar/mark relationship. When they see a car that sells for $44,000, they say to us, 'No, that's a $38,000 car.' If we want to keep that customer, we'd better sell him that car for $38,000."

Incentive programs currently in place will continue for many of the European import companies, experts said.

"Incentives have become a way of life," said John Hammond of J.D. Power and Associates, an automotive marketing consulting firm in Agoura Hills, Calif. "We will see them continue through 1988."

Analysts, however, remain divided on the severity and length of the downturn in the market.

"We're saying that for a month or two the trend will continue," said Hammond. "(As for the new tax changes) there is an unusual amount of under-withholding and people who ordinarily would go out and spend money on a car are being affected by that.

"We expect to see them in the market in the near future."

"By the fall you'll see a stabilization in prices," said Majeed of Drexel Burnham Lambert. "The high-line European cars have registered a (sales) decline in all but two of the last 12 months, and I think that will stabilize."

Two companies that don't hope the market will stabilize — because they've registered sales increases for the first quarter of 1988 — are Jaguar and VW.

Jaguar attributes its strong sales to demand for its redesigned sedan introduced late last year; only recently has supply met demand.

VW's 15,434-unit increase has been through the sale of its price-leading, Brazilian-built Fox sedan and wagon. Some 14,000 sales in the quarter had the Fox nameplate.

Yugo: off 35.37 percent, or 4,883 units

However, the company is planning to drastically reduce its shipments of the Fox to the United States during the next 18 months because of escalating costs (related story on Page 1).

The question remains, why the slump?

Most analysts cited prices; some cited increased domestic competition.

"The stock market crash created a little caution for a few months — a caution that continues," Hammond said.

"At this point, it's the overall economy," said a Volvo spokesman. "The upmarket car buyers seem to have backed off a bit. They seem to be saying, 'We'll sit this dance out.'

"We see April as a bellwether month due to the tax situation. If you consider demographics of these people, they are the ones who will feel the variability of this new tax season the most."

Makers of less expensive European makes cited a ripple effect from the upmarket makes as cause for their worries.

"Generally," said Tony Ciminera, executive vice president of Yugo America, "most of our outlets are dualed or tripled with major makes. When the others suffer, we suffer."

Yugo has taken many steps to improve sales, including an extended warranty program, increased ad spending and a consumer rebate program that carries through April.

Another company fighting the sales disease is Peugeot. It has both dealer and consumer incentive programs to stem declining sales.

The most effective program for Peugeot has been a $3,000 rebate first offered to current Peugeot owners and recently extended to owners of all cars.

"We've seen some success in March sales," said a Peugeot spokeswoman. "Our unit sales are up, 558 vs. 326 units in February." The trade-in allowance began in February.

Peugeot is also involved in a direct-mail campaign targeting import owners and high-end domestic-car buyers.

With the aid of R.L. Polk, 500,000 direct-mail pieces will solicit current import owners. The letter informs them of Peugeot's $3,000 cash incentive with the purchase of any Peugeot 505 sedan.

"There is so much competition in the market that the only way to reach the consumer is to increase advertising," said the Volvo spokesman. "Our advertising costs are up about a third (over last year). This year, you have to shout louder — spend more — to have your message heard."

Volvo has a fixed-price lease program as well as a 10-year retail financing schedule carried through Chase Manhattan bank. Volvo also offers dealer and customer incentive plans.

Sales drop 25% for U.S. cars in early April

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

The crack of the bat and opening day in baseball stadiums across the country in early April were accompanied by a slump in sales of new domestic cars.

Nicked by one less selling day, the industry's deliveries of U.S.-built new cars tumbled to 144,954 units for April 1-10, down 24.95 percent from 193,139 in 1987. There were eight selling days in the period this year and nine last year.

Major sales incentive programs continued unabated through the month's first 10 days.

Only Honda dealers, with a 17.05 percent improvement, delivered more cars in the April 1-10 period than they did a year ago.

Nissan reported a falloff of 56.24 percent in sales of cars built in this country, and Volkswagen reported a dip of 51.09 percent.

For General Motors, the decline amounted to 27.84 percent. For Toyota, it was 25.64 percent; and for Ford Motor, 25.26 percent. Chrysler Motors reported a drop of 18.02 percent in retail sales for early April.

Mazda, which started building cars in this country in September, sold 230 units in the period.

The daily selling rate in the period this year was 18,119 cars vs. 21,460 in 1987.

Car dealers and manufacturers are throwing all their marketing pitches as spring runs its course. Some say they are able to observe direct results of some programs.

Yugo of America executives, for example, say Yugo's strong month-to-month sales increase in March over February stemmed directly from three efforts.

William E. Prior, president, said, "Our dealers report significant renewed customer interest in the Yugo, with many dealerships reporting sales volume increases well over 100 percent."

The company recently increased its warranty, launched an aggressive advertising campaign and put in play a $500 cash rebate.

Import car-truck inventory declines 4.3% for month

By Roger Rowand
AUTOMOTIVE NEWS STAFF REPORTER

Stocks of unsold new imported cars and trucks in this country, a subject of concern in import circles, have been pared only slightly in recent weeks.

On April 1, they were just 4.30 percent below the bulging levels of a month earlier. In comparison to a year ago, car stocks remained significantly higher while truck stocks were down.

An Automotive News analysis indicates there were 872,028 cars and trucks on hand April 1. That was the equivalent of a 69-day supply at the current rate of sales. A month before, the car and truck total was 911,194 units, equal to a 78-day supply.

On April 1, 1987, the import car and truck inventory totaled 761,917 units, a 59-day supply at then-current selling rates.

Most importers have sales incentives of one sort or another in force. They include cash rebates, dealer bonuses, U.S. savings bonds and free options.

The inventory of unsold imported passenger cars as of April 1 was 670,608, a 67-day stock, down sharply from the 702,748 units, or a 75-day supply, on March 1 and 539,759 cars, a 57-day inventory, on April 1, 1987.

The stockpile of unsold imported trucks at ports of entry, in transit and in dealers' hands as of April 1 also was smaller than it was a month earlier and was significantly down in number — but not in days' supply — from that of a year earlier.

As of April 1, the inventory of trucks totaled 201,420 units, a 74-day stock, down from 208,446, or 91 days, on March 1 and 222,158 units, a 65-day supply, at the selling rate on April 1, 1987.

By nation of origin, car inventories shaped up this way on April 1: Japan, 62.42 percent; Germany, 14.85 percent and others 22.73 percent.

A month earlier Japan accounted for 63.16 percent of the total stockpile, Germany, 14.31 percent and others 22.53 percent.

A year before, it was Japan, 67.22 percent; Germany 20.59 percent and others 12.19 percent.

Honda, which normally has a low inventory, reported only a 10-days supply as of April 1. Toyota had an 18-day stockpile; Acura, 26 days; and Mercedes-Benz, 34 days.

There was a 208-day supply of Merkur at current selling rates.

Truck group plans forum on hiring

The California Trucking Association will conduct a forum on attracting qualified drivers and other employees at the International Trucking Show in Anaheim, Calif., May 3.

Driver shortages are a major concern of trucking companies nationally.

Several Western trucking associations are helping to draft a career recruiting packet for the parley.

In other truck industry news:

• Freightliner Corp. has expanded its SpecPro software program for custom spec'ing of heavy-duty Freightliner trucks to include its FL-112 medium-length conventional models.

TRUCKING TRENDS

JOSEPH BOHN

With the addition of those vehicles, SpecPro encompasses the entire Class 8 Freightliner product line, including the Hard Hat series of special-duty trucks and tractors.

The SpecPro computer program was developed by the Freightliner software group to help customers choose the right vehicle and components to meet specific operating requirements.

• To support its customers and truck operators, Rockwell International's automotive operations has formed a Distributor Advisory Council. It includes 15 brake and driveline distributors, representing Rockwell's national independent warehouse distribution network.

• A composites truck of tomorrow will be one of the highlights at the AUTOCOM '88 Conference and Exhibits slated for May 23-26 at Detroit's Westin Hotel.

The Sedona light-duty truck is a total truck body using composites and mounted on a modified steel-frame T10 chassis.

The Sedona project is an advanced vehicle engineering study by the General Motors truck and bus group. It seeks to determine the viability of composites structures as applied to high-volume, light-duty trucks.

Sponsors of the third annual AUTOCOM are the Society of Manufacturing Engineers and the composites group of SME. They expect more than 500 executives, engineers and technicians to attend.

• Kenco of Milford, Pa., manufacturer of pickup and van accessories, expects to report a first-quarter sales increase of about 50 percent over last year because of booming pickup sales.

Kenco produces a variety of truck and van accessories, including running boards, bug and stone deflectors, bed mats, rear slider windows and off-road lighting.

Jim Pedranti, Kenco senior vice president, said women and yuppies who like spruced up trucks are helping boost demand.

Mystery firm plans Tennessee venture

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

A new medium/heavy truck manufacturing firm of somewhat mysterious origins is priming itself to begin assembling trucks in Mt. Pleasant, Tenn. Operations are scheduled to begin later this spring.

The firm is called Viamax and was formed by a group of investors. Tom Pepin is president of Viamax.

Little is known about Pepin or other principal investors in the firm.

Bob Maury, city manager of Mt. Pleasant, could tie the firm only to "some people who are in the trucking business in Illinois."

Maury said he believed Viamax has no connection with General Motors' Saturn plant in nearby Spring Hill, Tenn., or with Nissan's plant in Smyrna. At this time, Viamax does not have an office in Mt. Pleasant.

One truck supplier told Automotive News his company had recently been approached at a truck show by M.M. McGinty, president of J.I.T. Associates, a consultant to to Viamax.

The supplier said McGinty identified himself only as representing a new original-equipment manufacturer of Class 7 trucks. He said the company was studying assembly of very economical line-haul trucks of "something less than 80,000 pounds gross combined vehicle weight, probably in the 33,000- to 35,000-pound GVW range."

McGinty said the firm planned to build about 600 trucks a year, was a true OEM and was seeking OEM status from the supplier.

McGinty did not discuss component specifications, but said the firm planned to use Cummins C-series diesels. He said the firm had enough capital to start the project.

A Viamax press release, provided by Maury, said the company had chosen Mt. Pleasant as the site of its new custom truck-tractor assembly and manufacturing facility.

Viamax, a newly formed Tennessee corporation, said it will develop and market a truck tractor in the Class 7 range for lighter long hauls.

It said it will invest $12.3 million in new facilities using "factory of the future" designs and modern participatory employee/supervisory working relationships.

The company said in the press release that it will use two existing buildings in the Mt. Pleasant Industrial Park complex.

Operations there will begin sometime this spring "in an assembly mode, via a major component acquisition, using highly acceptable transport-industry-known components," the release said.

It listed such components as Cummins engines, Fuller transmissions and Rockwell axles."

The company's release said Viamax will emphasize an "energy-saving configuration" in its truck design, user-benefits and custom cab identification.

A second-stage expansion will involve state-of-the-art technology and processes to fabricate a cab, cab/sleeper, hood and fenders, the release added.

An additional planned expansion will provide facilities for beam design and processes to produce a truck frame in-house, according to the release.

Viamax expects to employ 25 people initially, 80 people during the first year.

It expects employment to total at least 160 people within two years.

KENWORTH: *Company sees gain in market share with model for regional short hauls*

By Len Fairfield
SPECIAL CORRESPONDENT

LOUISVILLE, Ky. — Kenworth has introduced a new T400A Class 8, the latest of several recent entries by American truck manufacturers in the rapidly expanding regional short-haul market.

Production of the T400A will begin in July and is projected to total 800 units this year and 2,400 in 1989.

Kenworth officials expect the new model to increase the company's market penetration by 2 percentage points. Kenworth had 10.69 percent of the Class 8 market in 1987.

The T400A, introduced at the Mid-America Truck Show, is a full Class 8 truck in its componentry and design. It shares many of the features of Kenworth's other conventional models, particularly the T600A and the T800. Perhaps the most significant difference is its short 112-inch bumper-to-back-of-cab dimension. This "medium conventional" design makes the T400A lighter and more maneuverable than its stablemates.

Kenworth officials believe there will be a gradual increase in sales of medium conventionals because their design characteristics make them particularly economical to operate in regional hauling applications.

A vehicle of this size can pull trailers up to 53 feet in length and still conform with overall 65-foot length restrictions.

Hank Kiefer, Kenworth general manager, said the new vehicle is a direct response to the emerging "hub-and-spoke" distribution patterns in the trucking industry.

"In order to optimize operating efficiencies, customers are utilizing trucks designed for specific applications," Kiefer said.

Kenworth T400A Class 8

Long-haul trucks, like the Kenworth T600A and the T800, are being used to carry goods between major distribution centers — the hubs. The T400A was designed to make deliveries from the hubs to surrounding locations — the spokes.

Trucks in regional operations generally run less than 400 miles per day, and much of that mileage is in inner-city deliveries. Since the driver and his equipment return to the hub terminal every evening, Kenworth is not offering a sleeper box on the T400A.

The vehicle has a sloped hood, aerodynamic design that offers good visibility for the driver and better fuel economy than conventional designs. Its 12,000-pound front axle is set back 43 inches from the bumper. That, combined with the short BBC dimension and a sharp front-axle turn angle, results in a relatively small 49-foot wall-to-wall turning diameter.

TRW's TAS65 power steering unit is standard.

Standard engine is a 270-horsepower version of the Cummins L10, with 240-hp and 300-hp versions of that engine optional.

Officials also plan to offer Caterpillar's new 3176 engine as an option. It has horsepower ratings of 250 to 325.

Kenworth settled on those engines after evaluating the needs of the medium conventional market. Though some competing vehicles in that class offer larger 14-liter engines, Kenworth felt that demand for engines of that size would be limited due to their higher operating expense.

At the other end of the spectrum, the Cummins 8.3-liter C engine was considered too light because of its 65,000-pound cargo hauling limitation.

In an era of driver shortages, driver acceptance of a vehicle is an important factor in design considerations.

Other Kenworth models have been highly regarded by drivers, and Kenworth has tried to get the same response to its latest entry.

The T400A has the same aluminum/fiberglass cab and many of the interior features being offered in Kenworth's other conventionals. To allow easier access into the vehicle — an important consideration for local delivery applications — the cab is mounted three inches lower than competitive cabs. It has wide, equally spaced steps integrated into the side fairings.

Kenworth's past marketing practice has been to offer prospective buyers just about any option they wanted. It is modifying that policy, though, and limiting option availability on the T400A to keep costs and prices down. Officials plan to gauge optional equipment demand in order to determine which additional accessories they may offer in the future.

Chrysler urges dealers to use its auctions

"Chrysler Motors Action Auctions" is a slick new eight-panel, two-color brochure aimed at getting the company's franchised dealers to attend the closed auctions conducted by the company.

Highlighting the brochure is a message from Hal Barton, general manager of fleet operations, urging dealers to take advantage of Chrysler auctions.

He says more than 50 closed auctions are conducted every month for Chrysler, Plymouth, Dodge and Jeep-Eagle dealers.

"You'll find a good mix of top-quality, low-mileage, factory executive, employee lease and Guaranteed Depreciation Program rental vehicles that can provide more opportunity, flexibility and profitability," Barton says.

His pitch includes praise for the facilities offered at auctions.

"You can rely on these closed auctions for fair, honest dealings because they're all factory-controlled with a Chrysler Motors representative present," he says.

The brochure has letters from the chairmen of Chrysler Motors' dealer councils, urging dealers to support the program. The chairmen are James B. Clark, National Dodge Dealer Advisory Council; Dick Bournival, National Chrysler-Plymouth Dealer Council; and Ray Tatum, National Jeep-Eagle Dealer Advisory Council.

There are testimonials from Chrysler Motors dealers, including one who says the cars "account for 20 percent of this dealership's overall profitability."

And for dealers who haven't attended an auction recently or who have never been to one, there are step-by-step instructions on how a Chrysler Motors auction works from registration to payment after the sale.

PRODUCTION

Car output moves past 2 million

By Kathy Barboglio
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers built their two-millionth car of the year last Friday, 19 days behind 1987.

So far this year, 2,011,502 cars have been assembled, 15.08 percent below the 2,368,592 completed last year at this point.

Last week, the makers scheduled production of 165,868 cars, the highest weekly build since the week ended March 21, 1987, when 171,149 were assembled.

Last week's total was 23.20 percent more than the prior week's 134,637 and 30.30 percent more than year-ago week's 127,561. Those were both holiday weeks.

Companies shared last week's estimated production as follows: General Motors, 50.45 percent; Ford Motor Co., 24.58 percent; Chrysler Motors, 15.37 percent; Honda of America Manufacturing Inc., 4.94 percent; New United Motor Manufacturing Inc., 1.71 percent; Nissan Motor Manufacturing Co. U.S.A., 1.57 percent; and Mazda Motor Manufacturing (U.S.A.) Corp., 1.38 percent.

Volkswagen of America's plant in Westmoreland, Pa., is idle until May 9 for model changeover.

Last week's scheduled truck output of 87,636 was 16.58 percent more than the previous week's 75,171 and 30.07 percent more than the year-ago week's 67,378.

Year-to-date, 1,243,437 trucks have been built, 10.09 percent more than the 1,129,429 assembled last year at this time.

GM's Leeds, Mo., plant closed today, resulting in the layoff of about 1,700 workers. Production of the Oldsmobile Firenza line has been discontinued.

GM has increased production of Pontiac Grand Am models from 4,800 units per week to 5,400 at its Lansing, Mich., plant.

A second shift will be added to GM's Pontiac East truck plant in Pontiac, Mich., in September. About 1,300 workers will be called back.

Overtime was slated last Saturday at GM's Detroit-Hamtramck; Willow Run, Mich.; and Lordstown, Ohio, plants.

All Ford plants except the Edison, N.J., facility are scheduled for daily overtime this week.

Cars and trucks gain in Canada

Canadian car production was scheduled at 26,965 units last week, 1.33 percent more than the prior week's 26,610 and 85.93 percent more than the year-ago week's 14,503.

The year-ago week's output was trimmed by the Easter holiday.

So far this year, 341,671 cars have been assembled, 34.87 percent more than the 253,342 completed last year at this point.

Truckmakers estimated production at 20,030 units last week, 1.35 percent more than the previous week's 19,763 and 55.43 percent more than the year-ago week's 12,887.

Year-to-date, 285,394 trucks have been built, 18.31 percent more than the 241,222 assembled last year at this time.

GM, Ford workers don't buy buyout plans

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Innovative buyout programs designed to rid General Motors and Ford Motor Co. of thousands of excess workers have met with disappointing results because the workers don't want to leave the security of their jobs.

Many say it's because provisions contained in UAW contracts negotiated last year don't provide workers with enough money to get out. Others say workers are reluctant to abandon their plants, their relative security or their benefits.

When new contracts were negotiated last fall, at least one-third of the 50,000 GM workers with 30 years' seniority — more than 17,000 — were expected to take the buyouts or early retirements, according to a local union source. But only 7,200 GM workers took the deals before a recent deadline.

Far fewer workers were expected to take the less-lucrative buyout packages at Ford, but so far only "a handful" of workers have accepted the proposals, in part because of few layoffs and much overtime work amid Ford's hot-selling streak.

The results — far below what the companies and the UAW expected — have not gone unnoticed at Chrysler Corp., which is currently holding contract talks with the union. Chrysler officials are saying that rather than drive away workers like GM and Ford are trying to do, Chrysler needs and wants to keep them.

The atmosphere was quite different a year ago when GM and Ford added contract provisions that allow them to eliminate one permanent job for every two workers who retire, quit or die and to reduce jobs on a one-for-one basis for special programs such as buyouts and early retirements.

Since the workforce size is otherwise fixed, that's the only way companies can permanently reduce the number of workers.

But to get workers to leave, the companies had to pay incentives of up to $55,000-$65,-

THE TURIN LOOK:

Giugiaro, Bertone show off exotic minivan-type concepts

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

TURIN, Italy — Challenged by the glittery Japanese prototypes and concept cars at Tokyo last October, the Italian design superstars responded at the Turin auto show with some flashiness of their own. The starring design was what Europe calls the one-box, and what America might peg as the minivan-shape.

Ital Design's Giorgio Giugiaro, a strong proponent of minivans as upscale, performance cars, presented the latest evolution of one-volume designs that dates back to his famous New York Taxi of 1976.

Giugiaro seemed to steal the Turin Show — if crowded stands mean anything — on the strength of having developed three vibrant concept works off the same basic platform.

One chief designer of a major European manufacturer said that Giugiaro re-established himself at Turin this year.

Carrozzeria Bertone also showed a one-box sports car, and Pininfarina presented a lightweight, 2+2 coupe that appears closest to a production concept among the Italian design studies here.

While Italy's independent stylists and body-builders displayed concept cars, Fiat and Alfa-Lancia concentrated on technical matters.

Alfa Romeo focused on engines — the foundation of its reputation. It presented two powerplants including a 16-valve offshoot of its four-cylinder boxer that it announced will go into a sporty version of the compact 33 model early next year.

The new engine is designed for higher overall output and greater torque at low revs — specifically, 80 bhp per liter and a torque curve allowing 80 percent of maximum torque at as low as 2,000 rpm.

Alfa also showed a research project based on the Twin Spark engine that debuted on the mid-size 75 (Milano) at last year's Geneva show. The so-called Lamellar engine features lamellar valves situated in the intake pipe near the valves.

Among the stated advantages is improved torque at low revs, since part of the fuel mixture load remains trapped between intake and lamellar valves following each piston cycle, creating a turbocharging effect in the next cycle. According to Alfa, the lamellar engine has 30 percent increased torque at 1,000 rpm compared with the Twin Spark.

Domenico Chirico, Alfa's head of research and development, said the engine is just coming out of the research phase and must undergo reliability testing before being considered for production.

Fiat announced it will introduce the first direct-injection diesel engine for a passenger car, installing the system on a version of the Croma in Europe.

Isuzu denies it backs phony fleet claims

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RENO, Nev. — With a dozen manufacturers trying to seat themselves in the medium-truck market, price competition is almost at the point of no-holds-barred.

General Motors and Ford Motor Co., for example, have chucked structured incentives in favor of price assistance programs in which the amount of factory money they provide a dealer to clinch a tough sale is figured, literally, on a deal-by-deal basis.

And reportedly, some Isuzu Truck of America dealers, at the urging of field sales representatives, have used phony fleet claims to cut prices and maintain their profit.

John Rock, general manager of GMC Truck Division, said that in fleet deals, "We basically don't get into a definition of how big he (customer) is or who you are. We say, 'Look, what is the competitive circumstance?' And the dealer literally, deal by deal by deal, comes to us and says, 'I need this amount of money because Ford, Navistar, Mack — somebody — is on this deal. And then we ask, as best we can, for documentation for that circumstance because our program is what it says, competitive equalization.

"We're moving to meet a competitive circumstance. And it's very important because when you move to meet a competitive circumstance, you're legal within all classes, and that's the way we're doing it."

Ford joined GM in April by installing an 800 number that its dealers can call and, depending on the sizeand kind of deal, the dealer and the circumstances,

SATURN

It's on target for '90 intro; lineup to grow — LeFauve

By Kathleen Hamilton
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — General Motors' Saturn project is on schedule, below budget and will some day be selling a number of models, including a 2+2 coupe and multiple sedans, but probably not minivans and definitely not a two-place Fiero successor.

In a wide-ranging interview, Saturn President Richard G. LeFauve talked about the company's unusual management structure, its plans to

LeFauve: "Hard-core import buyers are willing to give Saturn a shot because deep in their hearts, the hard-core buyer would like to buy an American car."

Iacocca's high pay dulls offer to union

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — The traditional far-out theatrics of first-week auto talks became mired in money last week — how much Chrysler Corp. executives make and how much they should share with UAW workers in the future.

Chrysler offered to forego executive bonuses in future lean years when workers do not receive profit sharing, but that was seen by many — especially the union — as lightly veiled face-saving that preceded by only one day the disclosure than Chrysler Corp. Chairman Lee A. Iacocca received $17.9 million in 1987.

Chrysler's proxy statement also revealed that Ia-

Alfa tops dealers' hit list

Survey finds unrest in Yugo ranks, too

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

A dealer attitude survey by research firm J.D. Power and Associates on the number of dealers who may discontinue their franchises in 1988 has some automakers worried while others are calling the report stale or are challenging its credibility.

Power, an automotive consulting and research firm in Agoura Hills, Calif., released portions of its 1987 Dealer Attitude Survey in its April Power Report. It said that 8 percent of the dealers surveyed reported that they may discontinue at least one franchise this year; 21 percent of the high-volume operators may turn over a franchise; and 30 percent of the megadealers may opt to drop a franchise.

Alfa Romeo fared worst, with 35 percent of its 152 dealers threatening to discontinue the franchise, according to the report.

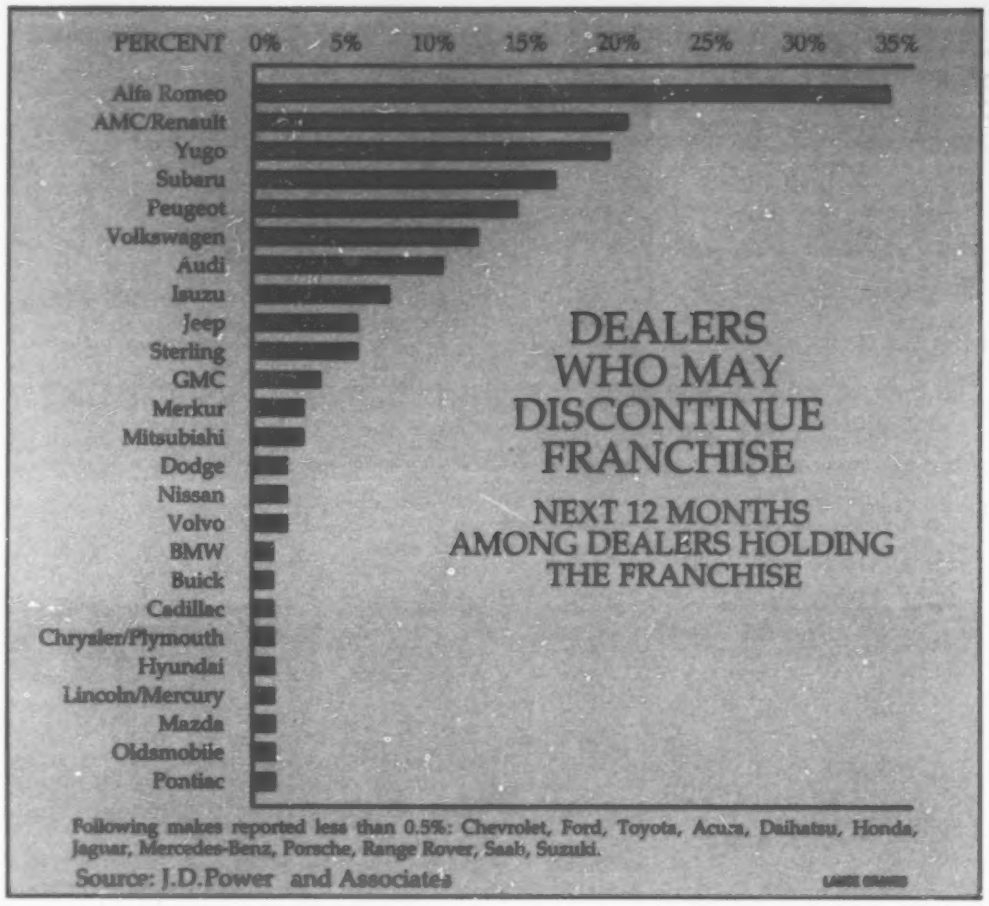
Edouard Richard, general manager of the San Francisco Autocenter in San Francisco, told Automotive News the dealership is in the midst of transferring its Alfa franchise to a neighboring dealer.

"The Italians are hopeless," said Richard. "They should stick with designing cars or making shoes because they can't build cars."

He also charged that the warranty program is in shambles, saying: "A lot of things would be better if the factory would take care of the warranties, but their attitude is that the dealer is stupid and the owner can't drive."

Richard said the dealership had the franchise purely from love for the vehicles — not as a sound business investment.

Joseph E. Cooley Jr., Alfa Romeo Inc. vice president — sales, conceded there is an element of dissatisfaction among dealers but dismissed the prospect that 35 percent of Alfa Romeo dealers could be considering discontinuing the franchise.



He said Alfa hopes to have 170 dealers by the end of the year and move toward 200 in 1989 as the company prepares to launch the larger Alfa 164.

"I'd like to know the basis of the survey," said Cooley. "I've talked to dealers and members of the dealer council — it's ridiculous."

A spokesman from J.D. Power said 10,000 questionaires were sent to dealers between Aug. 21 and Oct. 5 and 2,600 responded. He described the response rate as a good, representative sample. There are approximately 25,000 new-car dealers in the United States.

The report found 21 percent of the AMC-Renault dealers indicating they would drop the franchise in 1988. But the survey came as Chrysler was acquiring American Motors, and dealers carrying only the former AMC's cars are now few and far between.

"This is pretty old stuff, before the merger. All of our dealers are delighted and sales have never been higher," said Bob Williams, Jeep-Eagle dealer marketing manager.

Even Chris Denove, industry analyst for J.D. Power, conceded that the AMC-Renault findings are questionable because of the merger.

Twenty percent of the Yugo dealers surveyed said they may discontinue the franchise. A company spokeswoman said the numbers in the survey aren't representative of the 343 Yugo dealers.

"We calculate that J.D. Power received roughly 80 responses from dealers and 16 reported they would drop the franchise," she said. "Those that said they will drop the franchise probably will be forced to anyway."

She said Yugo is "aggressively revising" its dealer body, insisting dealers make a firm commitment to the product or face termination by Yugo.

Subaru's results — 17 percent of those surveyed saying they may discontinue the franchise — have some Subaru officials concerned.

"We were concerned about it and are not brushing it off," said C.D. "Doug" Mahin, group vice president — sales and marketing. "It was based on 182 dealers, in which 30 dealers responded negatively."

But a later survey by the National Automobile Dealers Association showed better responses from Subaru dealers, said Mahin. He added that the recent purchase of independently owned distributorships by the company has helped improve communications between Subaru and its dealers.

Pete Mastro, owner of Mastro Subaru in Tampa, Fla., agreed with the company's assessment, blaming poor dealer morale in 1987 on Subaru's former distributors.

"That survey is old," he said. "A lot of the dealer problems were related to the distributors. The dealers felt threatened and

NHTSA study rebuts stand on rollovers

By Matt DeLorenzo
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Less than two weeks after NHTSA had denied a petition to conduct a safety-defect investigation into vehicle rollovers, a study done by the agency has surfaced that says there is a correlation between rollovers and a vehicle's stability factor.

NHTSA earlier denied a petition by Sen. Timothy Wirth, D-Colo., for a defect investigation and rollover standard using a stability factor based on half the vehicle's track divided by the height of the center of gravity. NHTSA said the stability factor is "too narrow and inappropriate approach."

However, a study conducted by E. Anna Harwin and Howell K. Brewer for NHTSA concluded, "An analysis of single-vehicle accident data has shown that a high degree of correlation exists between the risk of vehicle rollover and the vehicle rollover stability factor."

NHTSA's denial of the Wirth petition said "crash data available to NHTSA shows that driver behavior and the driving environment generally predominate over vehicle defects by an overwhelming margin as a cause of crashes." It concluded, "The stability factor analysis (in the petition) was not sound basis for rulemaking because of the presence of other vehicle factors in the rollover phenomenon."

The Wirth petition relied on a study by Leon S. Robertson and A. Benjamin Kelley that maintains the disproportionate involvement in single-vehicle rollover-initiated fatal crashes is the low stability factor of sport/utility and other vehicles with short tracks and high centers of gravity.

The Harwin-Brewer study for NHTSA also rules out other factors. "Various driver and environmental factors were also evaluated as to their influence on rollover risk," the study said. "Although driver's sex was shown to be consistently significant across all data sets, the overwhelming variable in explaining rollover rate variations as a function of vehicle make/model designation, is the vehicle rollover stability factor."

Retired Editor Lienert dies

Robert M. Lienert, retired editor of Automotive News, died last Wednesday in Fort Collins, Colo., after a long illness. He was 61.

Lienert was born in Inland, Neb., on April 26, 1926, and still called nearby Harvard, Neb., his hometown some 60 years later.

He was raised in rural Nebraska with seven brothers and sisters and he never lost his simple down-home style and his sense of humor, although he later traveled the globe and dealt comfortably with international industrialists.

In the days when Automotive News used the hot-metal typesetting process and linotype machines, he would frequently wear a red plaid flannel shirt and blue denim bib overalls to work on days when, as editor, he needed to be in the shop. On those occasions, he dressed as the "Nebraska farm boy" he loved to call himself.

Lienert began his journalism career in 1946 as a staff writer for the Nebraska State Journal in Lincoln. He graduated from the University of Nebraska that year. He later described his duties at the Journal as "night sports editor, reporter and copyreader."

In 1947, he earned a master of science degree from the Medill School of Journalism at Northwestern University and was hired as a copy editor by the Detroit Free Press, where he worked until joining Automotive News in 1953.

He was appointed news editor of this publication in 1962, managing editor in 1966 and editor in 1974.

"Bob Lienert was an invaluable asset to the growth and resurgence of Automotive News over the last three decades," said Keith E. Crain, publisher and editorial director of Automotive News.

"His retirement last year was well-earned and we are all saddened by his untimely passing."

It was Crain who appointed Lienert editor. Crain Communications acquired Automotive News in 1971. Under Lienert's editorship, the paper expanded its scope from coverage of dealer issues to become the leading industry-wide automotive trade journal.

"Bob Lienert was a real pro," said Chrysler Chairman Lee A. Iacocca, "He knew journalism and he knew our industry. He was well-respected and well-liked and will be sorely missed.

"My sympathy goes to his family," Iacocca said.

"I was greatly saddened to learn of the death of Bob Lienert," said Ford Vice Chairman Harold A. Poling."

"He was an automotive journalist of great in-

Isuzu, with GM help, seeks big-truck lead

By Jake Lucas
SPECIAL CORRESPONDENT

LONDON — Isuzu Motor Co. is planning to expand its truck assembly and distribution worldwide through joint ventures with General Motors in order to overtake Daimler-Benz as the world's leading maker of big trucks.

Kazuo Tobiyama, Isuzu president, said, "I have been giving our employees the target of making Isuzu the world's No. 1 maker of commercial vehicles." Isuzu already is the world's second-largest producer of trucks over 4 metric tons.

"If we try just a bit harder, we believe we can draw level with Mercedes-Benz," Tobiyama said in an interview with Japanese Motor Business, published by the Economist Intelligence Unit, London.

Tobiyama said an Australian joint venture would soon be set up with GM to distribute trucks. A GM Holden factory would be used to assemble knockdown kits, and Isuzu trucks would be sold through the GM Holden dealer network.

"We hope in the future to expand this sort of business with GM on a worldwide basis," he said. GM recently increased its stake in Isuzu to 41.6 percent.

Isuzu and GM already have a joint truck venture in Britain. The former Bedford van plant at Luton is now operated by GM and Isuzu management and produces Isuzu and Suzuki vans. Tobiyama told the publication that the company hopes to build other vehicles there.

He said GM executives in Britain are looking at the off-road, four-wheel-drive market and that the Isuzu Trooper would be an obvious vehicle to sell in Europe. The Ford-Nissan study regarding the viability of building a 4wd vehicle at Motor Iberica in Spain may convince GM it should act sooner.

Tobiyama also said Isuzu is considering importing the Pontiac LeMans, built by Daewoo Motor in Korea, for the Japanese market, if it can be cheaply priced.

"We would want to sell the car at a very low price rather than in direct competition with comparable Japanese models, including our own Gemini," he said. "We see the market for the car in areas like the rent-a-car industry and among younger buyers. Price is the key."

Negotiations to import the Opel Senator and Omega models from Germany and have Isuzu sell the cars in Japan under the Opel name are also continuing. Most likely, the Ascona and Manta would be added at a later date.

Isuzu would also consider assembling Opels in Japan, Tobiyama said, "if sufficient volumes were involved. The cars would, of course, be cheaper if we built them in Japan."

Isuzu already produces 400,000 to 500,000 five-speed transmissions for Opel and recently began to supply GM's plant in Spain with 1.5-liter diesel engines. It can provide up to 60,000 engines a year for the Corsa model.

The Isuzu president warned that total transplant capacity in America in the coming years of up to 1.5 million units will create overcapacity and fierce competition in the "fight for survival."

However, he expects Isuzu to be less affected than others because it will build 1-ton trucks — not cars — at the joint Isuzu/Fuji Heavy Industries plant in the United States.

Tobiyama also painted a brighter financial picture for the company. Following a 10 percent sales decline in 1987, Tobiyama predicted Isuzu sales in 1988 will increase from 530,000 to 570,000, and operating profit will be 17 billion yen ($136 million). In 1987, Isuzu recorded an operating loss of 15.6 billion yen ($125 million).

Isuzu to offer low-floor cab-chassis model

RENO, Nev. — Isuzu Truck will introduce a new cab chassis, the NPR Flat Low, in November with flat bed, van, stake platform and other body applications.

It features a low body floor height for customers who load and unload vehicles by hand. Minimum loading deck height without wheel wells is 34.5 inches.

The vehicle has a 10,500-pound GVW rating and accommodates 5,300 pounds of body and payload. It has a load capacity of up to 3,900 pounds and is available in 109.0-inch, 132.5-inch and 150.0-inch wheelbases. It is powered by a 126-horsepower turbodiesel engine and Electromatic four-speed automatic transmission with third and fourth gear lockup.

— Joseph Bohn

New Sleeper for Volvo model
An optional new WhiteGMC Integral Tall Sleeper Aero tractor was added by Volvo GM Heavy Truck to broaden its Class 8 product line. The Integral Tall Sleeper Aero has two stacked bunk beds in the 102-inch-high sleeping compartment — a 36-inch-wide-lower bunk and a 29-inch-high upper bunk.

JWT eyes comeback, a la Ford

By Laura Clark and Stephen Downer
AUTOMOTIVE NEWS STAFF

DETROIT — J. Walter Thompson's top executive predicts the giant ad agency will stage a comeback in the advertising business the same way its biggest client, Ford Motor Co., did in the automotive industry.

JWT Chairman Burton Manning said the agency, like Ford, must stress "product, quality, innovation and maintaining sensible costs" to make a comeback.

Despite the optimistic forecast, JWT is facing a tough fight to retain its Ford business overseas as other Ford agencies — namely Young & Rubicam and Ogilvy & Mather — set their sights on more Ford ad business.

In an interview, Manning told Automotive News that the agency is not worried about losing more Ford business to competitive agencies. JWT, which was bought by Britain's WPP Group for $566 million in July, has lost nearly $500 million in billings since its ownership change, including approximately $105 million in Ford accounts outside the United States.

"It's a waste of time and energy to think about what you've lost," he said. "What (accounts) you have are very important, and you have to be sure that they're getting the best support, the best people, the best strategy."

Ford switched several of its advertising accounts outside the United States from JWT to Young & Rubicam and Ogilvy & Mather, consolidating much of its international advertising under those agencies. The switch gave nine European advertising accounts to Ogilvy and the Ford of Canada account to Young & Rubicam. Though the move was termed a consolidation, sources say the switch was to show Ford's displeasure with the WPP takeover.

Young & Rubicam also handles Ford's Lincoln-Mercury Division, and Ogilvy last summer took over the Ford parts and service division account from Young & Rubicam.

The shift of European and Canadian ad accounts was followed by Ford's $5 million shift of two of its Latin American advertising accounts in mid-December. JWT lost the $3 million Ford Brasil account to Salles/Inter-Americana (an independent agency) and the $2 million Ford Motor de Venezuela account to Corpa/Ogilvy & Mather.

JWT is facing competition from Young & Rubicam and Ogilvy for its Ford of Mexico advertising account, now under review. A former Ford of Mexico senior executive said top managers have been given orders from Ford's world headquarters to drop JWT.

Manning said JWT representatives flew to Mexico recently to present the agency's capabilities for the Ford of Mexico account. WPP Chairman Martin Sorrell flew from London for the presentation, sources in Mexico said.

Ford officials have said they are pleased with JWT's work for Ford Division in the United States despite widespread speculation from industry observers that JWT will lose the account sooner or later. In an apparent show of support for JWT, several Ford executives — including Ford Division General Manager Thomas Wagner — were on hand for a speech Manning gave at a recent Adcraft Club of Detroit luncheon.

Sales rise in Canada

Ford, Chrysler advance 7% for quarter

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — The Big 3 domestic automakers posted moderate car sales increases in Canada for March and the first quarter of 1988.

First-quarter gains at Ford and Chrysler were similar — Ford tallied a 7.63 percent rise while Chrysler was up 7.27 percent. General Motors' sales increased 1.32 percent.

Adding in Honda's and Volvo's Canadian-built units brought the March sales total for domestic cars to 76,848 units, compared with 70,960 in March 1987. Sales of domestic cars for the first three months of 1988 were 162,702 units, compared with 154,981 in the year-earlier period.

Total sales of North American-built cars and imported cars were 235,649 units for the first quarter, compared with 228,301 in 1987. Sales for March totaled 109,147, a 4.82 percent increase over 104,129 in March 1987.

Ford was up 13.17 percent in March, compared with the year-earlier period, and Chrysler sales rose 13.90 percent. GM sales climbed 2.15 percent.

For imported cars, Suzuki, as the result of more dealerships and an increase in advertising, continued to show the hottest growth curve, posting a 285.04 percent gain over March 1987.

Mazda's monthly gain was a healthy 33.25 percent, while Volkswagen was up 24.67 percent.

Import loser of the month was Subaru whose sales slipped 49.5 percent, followed by Hyundai, which was down 40.10 percent.

The Big 3 showed substantial truck gains in March. The pace was set by Chrysler with 12,215 sales, a 69.58 percent increase over March 1987. For the first quarter, Chrysler was up 71.49 percent, compared with the year-earlier period.

GM's domestic truck sales for the quarter were 39,698 units, a 13.51 percent increase over the 1987 period. Ford tallied a 9.97 percent gain over the same three-month period last year.

Suzuki, Mazda and Toyota showed the highest percentage gains for March among truck importers. Suzuki was up 129.15 percent compared with March 1987; Mazda gained 50.49 percent; and Toyota increased 39.05 percent.

Nissan's truck sales were down 10.20 percent for the month and 23.98 for the first quarter compared with 1987 periods.

Chrysler turns to console-type diagnostic system

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors is developing a console type computerized diagnostic system for its dealers, breaking with a practice of emphasizing hand-held diagnostic tools.

Chrysler Motors has had a philosophy of putting as much diagnostic information as possible into the on-board engine and body control computer. Then, with the aid of a sophisticated scanner device — Chrysler's DRBII — the technician could analyze the engine and body control systems.

However, Chrysler has responded to dealer and service industry demand for a personal-computer-based diagnostic system and is now developing its own system comparable to "General Motors' Computerized Automotive Maintenance System (CAMS) and Ford's On-Line Automotive Service Information System (OASIS)," according to Ray Bollman, manager of serviceability and technical service liaison for Chrysler Motors.

The Ford service information system is a relatively simple computerized unit that provides a clearinghouse of technical service information for dealers, but the company also has developed a personal-computer-based diagnostic unit similar to GM's. Ford's is called the Service Bay Diagnostic System (SBDS).

The GM and Ford personal-computer-based consoles combine artificial intelligence, diagnostic routines and an up-to-date storehouse of visual and written service information.

The units can walk less-skilled technicians through diagnostic procedures, provide the latest service bulletins for specific models and also allow skilled technicians to diagnose malfunctions with speed and accuracy.

To date, Chrysler Motors has focused much of its service development on "scanner" tools that read trouble codes and, in some cases, voltages and resistances throughout the engine or vehicle control circuit. Those devices can also "exercise" electro-mechanical systems in the vehicle.

A Chrysler Motors service engineer said, "Our philosophy has been that the vehicle must be able to deliver as much information to the technician as possible."

Chrysler's on-board diagnostics have more on-board readout capability than competitive systems, he claimed.

"The mechanic can use a DRBII and our fault tree and zoom in on a problem," he said.

However, technicians are not always able to keep up with the tremendous amount of new information provided to them — new repair procedures in service manuals and technical service bulletins, for example, often go unread.

"Even with a competent mechanic, it will take a few minutes to find a service bulletin or service manual. The technician may not look for it. Or the technician may get stuck on a problem. With a service bay computer system, all the information would be in one package," the engineer said.

The Chrysler service bay system will work, or interface, with the company's DRBII device, he said.

Chrysler gave its dealers a first look at the computerized console type project at the National Automobile Dealers Association convention in San Francisco in February, he noted.

Personal computer type units enable less-skilled technicians to repair cars more easily. However, because of their price — GM's CAMS is about $18,000 — every technician in the dealership may not have access to the equipment at all times.

Scanning devices, however, provide a great deal of service information at a reasonable cost. The DRBII, for example, costs about $700.

A skilled mechanic often can diagnose a malfunction with a hand-held unit in the same time as a technician using a more sophisticated computer tool, according to Douglas Graham, national account manager for OTC tool and equipment division of Sealed Power Corp. at the company's Detroit-area technical center.

"In terms of speed, the technician who knows what he is doing with a hand-held tool doesn't have to go through an automated test procedure that a less-skilled mechanic would use on a console type machine," Graham said. "However, most console machines can run manually, so the main advantage of the hand-held unit is its price."

OTC manufactures the Monitor 2000 hand-held diagnostic tool. The device is quite popular, with 120,000 units placed in the field since its 1984 introduction, Graham said.

The device takes plug-in software cartridges for GM, Ford and Chrysler products and a unit (with GM software) costs about $425, he noted.

"The device," he said, "is as common as a digital volt-ohmeter. Many mechanics purchase it for their own use."

In addition to computerized service-bay consoles and hand-held scanners dedicated to a manufacturer's line, the aftermarket provides a great deal of generic service equipment.

One of the most basic of electronic test tools offered by manufacturers and the aftermarket is called a "breakout-box." It enables technicians to tap into the car's electronic control module harness and read voltage and resistance readings with a digital volt-ohmeter.

A breakout box is often used in concert with a scanner. It enables a technician to pinpoint a malfunction. The device may also serve as a teaching tool.

A breakout box enables technicians to teach themselves how systems work said Thomas F. Hornung, founder of of Concept Technology, a Detroit-area manufacturer of such devices.

"You have to have a wise technician to use a breakout box, but it also allows curious technicians to educate themselves," he said.

"For example, they can attach a breakout box, push on the gas pedal and watch the relationship of voltages.

"A technician can first learn how to use the breakout box. Then, through experience, the technician learns to recognize symptoms and narrow down areas that cause the problems," he said.

There are also a number of relatively inexpensive universal service tools in the field. Those tools include test lights, pressure gauges for fuel injection systems and fuel injector pulse testers.

Graham of OTC said the manufacturer sells a basic fuel pressure test kit for $250 and a fuel injector pulse tester for $50.

Breakout boxes from various manufacturers generally range from $300 to $450.

Dealer beeps patrons

Pager warns service clients if car is late

When the service shop at Leesburg Jeep-Eagle in Leesburg, Va., runs into a problem and finds it will take longer or cost more than anticipated to repair a customer's car, it has no difficulty notifying customers ahead of time.

Each customer gets an electronic paging beeper that allows the service department to contact them.

"We've virtually eliminated what we call service shock," said Gary Cohen, dealership owner. "The beepers allow us to contact customers who just can't be reached by telephone.

Leesburg Jeep-Eagle also provides a free loaner car to customers who can't find alternative transportation while their cars are in the shop.

SHOP TALK

ARTHUR FLAX

Electronic catalog

Bell and Howell's IDB2000 electronic parts catalog system will be offered for installation at Honda dealerships by late spring, the computer maker announced.

The system, which is currently offered to General Motors and Chrysler Motors dealers, provides parts illustrations as well as parts numbers and bulletins.

Mercedes program grows

Mercedes-Benz of North America has expanded its roadside-assistance program.

The program, which Mercedes started in 1981, now operates 24 hours a day in the New York metropolitan area. The former hours were 5 p.m. to midnight weekdays and 8 a.m. to midnight weekends and holidays.

Mercedes will phase in 24-hour service across the rest of the country by the end of June.

Karl-Heinz Faber, Mercedes-Benz of North America vice president for product compliance and service, said, "The response to our roadside-assistance program has been overwhelmingly positive. Providing 24-hour coverage will make it even more valuable, particularly for long-distance travelers."

The Mercedes program differs from others in that it is automatically available to every Mercedes owner, regardless of the age of the car or if it was bought new or used. Service is covered during the four-year/50,000-mile warranty or is paid by the customer if the car is out of warranty.

Ford training

Ford has devised a computer-training program for its dealers that allows technicians in training to interact with a video screen.

The program, known as the Intelligent Video Learning System, allows a technician to answer questions, make repair decisions and perform simulated-diagnostic procedures by following a narrator's instructions and pointing a light pen at the appropriate point on a video screen. The screen displays components and vehicle systems.

Ford computer trains technicians

The system consists of a video-disc player, television monitor, microcomputer and light pen. A 16-program disc library covers numerous subjects including air conditioning, carburetion and electronic engine controls.

The system will provide an opportunity to reach technicians who aren't able to attend training sessions conducted by district service engineers and also will allow training as work schedules permit, Ford said.

Award for Regal

Home Mechanix magazine gave the 1988 Buick Regal its "Easy Maintenance Car of the Year" award. The magazine lauded the Regal's serviceability, noting the car's easily accessible spark plugs and front MacPherson strut shock-absorber cartridges.

Regal's V-6 engine tilts forward (after removing bolts that can be reached easily) to allow access to the rear bank of spark plugs. The strut cartridges can be lifted out from the top of the engine compartment.

Service, parts business advances 5% for month

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business at new-car dealerships was slightly above the 1987 pace at the beginning of 1988.

In January 1988, shop volume at new-car dealerships was 5.0 percent above the year-earlier figure. January 1987, however, was a weak month for service business, registering 98.3 percent of the volume for January 1986.

Shop business in December 1987 was up 4.3 percent over the year-earlier month, and business for all of 1987 also was up 4.3 percent over 1986.

An analyst at one of the Big 3 automakers said nasty winter weather helped shop business. He said he expected February and March service volume figures to continue at high levels.

However, he predicted a slowdown for April, saying customers are becoming less certain about economic conditions. Dealers, he added, are requesting that the automakers offer special service incentives to their customers. This follows a long period when the dealers had all the shop business they could handle.

Warranty business also has declined as a result of a stable vehicle population and vehicle improvements, he said. Service-contract and customer-paid business, however, is rising, particularly as more service contracts — previously a small segment of the business — are sold and take over from warranty work, the analyst said.

A Northeastern Chevrolet dealer whose service business increased attributed his performance to "better control of work through computer scheduling and better trained mechanics."

An Eastern Chevrolet dealer said service volume rose because of increased traffic into the dealership and more labor sales per repair order.

An Eastern Cadillac dealer who service volume declined noted that his shop had one less working day in January 1988 than in January 1987.

Gross profit on all labor, parts and accessory sales led January business indicators with a 9.2 percent increase over January 1987.

Shop-parts sales (customer-paid and warranty) rose 6.1 percent over the year-earlier month; sales of all parts and accessories climbed 5.8 percent; and total labor sales (customer-paid and warranty) increased 3.4 percent.

Repair orders written fell 0.3 percent.

Parts and accessories sales to off-premises customers in January 1988 were up 5.6 percent, compared with the year-earlier month.

SERVICE INDEX 105.0*

	Jan., '88 vs. Jan., '87
Gross Profit on All Labor and P&A Sales	+9.2%
Repair Orders Written	−0.3%
Total Labor Sales (Customer & Warranty)	+3.4%
Shop Parts Sales (Customer & Warranty)	+6.1%
Sales of All P&A	+5.8%

* Survey by Automotive News shows that dealers' service and parts business in January 1988 was 105.0 percent of business in January 1987.

Auction fees earmarked for charity

Metro Auto Auctions of Kansas City, Mo., will donate proceeds from its annual Marathon IV sale to the National Independent Automobile Dealers Association and the Missouri Independent Automobile Dealers Association, which will donate the money to a national charity.

Metro's Marathon IV sale will start at 10 a.m. May 24. The consignment fee of $20 per vehicle will be donated to the charity. The goal is 2,000 consignments.

New Jersey's Skyline group adds Houston auction, looks for more

Texas Dealer Auction in Houston has been sold to New Jersey-based Skyline Auction Group for an undisclosed amount.

The auction has four lanes with a consignment of about 700 vehicles per month.

The group also owns Skyline Auto Auction in Fairfield, N.J., and Gulf Coast Auto Auction in Bradenton, Fla. The company bought Gulf Coast Auto auction last August.

Leonard P. Nedlin, president of the Skyline Auction Group, said he is on the acquisition trail but doesn't know how many auctions the company eventually will own.

"We are negotiating to buy other auctions," he said. "We will get as big as we are comfortable being."

The company is also on the prowl for personnel, including a chief executive officer, general operating managers, fleet managers and lease managers.

Canadian growth

Canadian auction owner Michael B. Lawrence has opened a seventh auction sale. It is located in Mississauga, Ontario.

AUCTION BRIEFS

CHARLES THOMAS

The Ontario Auto Auction (Toronto) Inc. officially opened March 3, selling 55 percent of a 480-vehicle consignment.

The new sale is dealer-only and is conducted every Thursday beginning at 10 a.m. at the company's full-service facility.

The sale is part of a network of auctions jointly owned by Lawrence and others.

The network handles about 450,000 vehicles annually in Canada at an estimated value of $2.25 billion (Canadian).

PRODUCTION

Truck output stays high after record

By Kathy Barbaglia
AUTOMOTIVE NEWS STAFF REPORTER

U.S. truckmakers scheduled output of 92,418 units last week, slightly below (0.87 percent) the prior week's 93,226.

The previous week's build was the highest for any week ever, topping the prior record of 88,469 set the week ended March 26, 1988.

Year-to-date, 1,341,445 trucks have been assembled, 12.04 percent more than the 1,197,340 completed last year at this point.

Last week's scheduled auto production totaled 162,504, 1.56 percent below the previous week's 165,073 but 17.00 percent more than the year-ago week's 138,895.

The year-ago week's output was affected by the Easter holiday.

So far this year, 2,173,211 cars have been built, 13.08 percent below the 2,500,243 assembled last year at this time.

Companies split last week's estimated production as follows: General Motors, 49.82 percent; Ford Motor Co., 25.60 percent; Chrysler Motors, 14.95 percent; Honda of America Manufacturing Inc., 4.62 percent; New United Motor Manufacturing Inc., 2.00 percent; Nissan Motor Manufacturing Co. U.S.A., 1.61 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 1.40 percent.

Volkswagen of America's Westmoreland, Pa., plant remains idle for model changeover until May 9.

As reported earlier, GM closed its Leeds, Mo., plant and discontinued the Firenza line on April 15, idling approximately 1,700 workers.

GM slated overtime last Saturday at its Buick City car plant in Flint, Mich.

Overtime was also scheduled last Saturday at three GM truck plants: Lordstown, Ohio; Fort Wayne, Ind.; and Moraine, Ohio.

Ford slated overtime last Saturday at its Wixom, Mich.; Edison, N.J.; Wayne, Mich.; Kansas City, Mo.; and Norfolk, Va., plants.

Daily overtime is scheduled this week at all Ford plants except the Edison, N.J., facility.

Canada slates best week ever: 27,020 cars

Canadian automakers scheduled production of 27,020 units last week, their highest weekly output ever. The total surpassed the previous peak of 26,733 for the week ended Dec. 14, 1985.

Last week's targeted build was 14.33 percent more than the previous week's 23,634, and 54.12 percent more than the year-ago week's 17,532.

So far this year, 365,360 cars have been built, 34.78 percent more than the 271,076 completed last year at this point.

Truck output was slated at 20,530 units last week, 1.84 percent more than the prior week's 20,159, and 12.08 percent more than the year-ago week's 18,317.

Year-to-date, 306,053 trucks have been built, 18.23 percent more than the 258,864 assembled last year at this time.

63rd year—$55.00 per year, $1.50 per copy

Dealer plays 'good guy' in Ford plan

$250 eases pain after warranty

By David Versical
AUTOMOTIVE NEWS STAFF REPORTER

When the rust spots on the trunk of William Hill's 1983 Lincoln Mark VI grew into a four-inch patch last year, the 63-year-old stockbroker was a bit puzzled.

This was Midland, Texas, after all, where body panels normally are immune to the ravages of rust.

Hill, a Lincoln owner since 1964, had never paid attention to Ford's corrosion warranty. And while he knew the problem wasn't his fault, he'd doubted that he'd get a break on his four-year-old car.

Hill's dealer fixed the car at no charge, even though the warranty expired after three years. But what was more unusual was that the dealer was able to extend the goodwill payment on the spot, instead of sending the request through cumbersome company channels.

At the time, Texas was part of a Ford Motor Co. test that gives dealers up to $250 per car to help cover repairs that no longer are covered under warranty. Ford is now rolling out the program across the country. This week, it goes into effect in Cleveland; Philadelphia; Louisville, Ky.; and San Jose, Calif.

By deciding the cases themselves, dealers say they'll take a big step toward making themselves and the company look like good guys in the eyes of customers. In the process, they say, they'll be able to take care of the customer in a hurry.

Iacocca: Chrysler will continue to use incentives to reach market share objectives

Chrysler slates output hike

Will add 110,000 units in bid to boost market share

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — In a bid to win 15.3 percent of the North American market in 1988, Chrysler Motors announced it will increase third- and fourth-quarter production by 12.6 percent, but acknowledged its strategy of stressing market share gains over profits eroded first-quarter earnings.

Chrysler earnings in the first quarter of 1988 fell 32 percent because of marketing costs and a one-time charge of $93.1 million for previously announced plant closings in the company's Acustar parts-making subsidiary.

Chrysler, with $183.7 million, was the only one of the Big 3 to report a decline in net earnings for the quarter. Ford earned $1.62 billion; General Motors, $1.09 billion. The total for the Big Three was $2.89 billion, up 7.8 percent from last year's $2.68 billion.

Chrysler Corp. Chairman Lee Iacocca last week said the company will continue to use incentives to reach market share objectives and that Chrysler will add 110,000 cars and trucks to its production schedule for the second half of 1988. Chrysler now holds 14.8 percent of the North American car and truck market, Iacocca said.

The increased production means that Chrysler's Kenosha, Wis., assembly plant will be given a three-month stay of execution. Iacocca said the plant, which was expected to close in September, will continue producing Dodge Omni and Plymouth Horizon America models and the Chrysler Fifth Avenue, Dodge Diplomat and Plymouth Gran Fury until the end of 1988.

Omni and Horizon, however, will remain in

GM's plan reflects dip in car share

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

General Motors in the future will offer fewer car and truck models built off fewer platforms and will cut its production capacity to reflect its reduced market share.

Facing the possibility that GM may never again sell half the cars in the United States, top company officials told Wall Street analysts in a closed-door briefing in New York that the company will modify its capacity to reflect its present 37-percent share of the U.S. car market, even if that means closing more plants than previously planned.

The announcement was viewed by many as a reversal of GM's previous position that its eroding share of the U.S. car market was a temporary problem that could be solved by propping up its sales through incentives. Its current market share is fractionally better than its 1987 performance, but down four points from 1986 when it had a 41-percent share and a far cry from 1978, when the auto giant held 48 percent of the car market.

GM Chairman Roger Smith told a group gathered at GM's "Teamwork and Technology" exhibit in Chicago last week that the 37-percent car market share was to be used as a planning base and that GM was not limiting itself to that share. Smith said the flexibility in GM's new plants could give the company a 45-percent share of the U.S. car market.

However, top GM officers told analysts in New York that the company will operate its truck plants at capacity, reflecting a 32- to 34-percent share of the U.S. truck market. GM held a 31-percent truck share, including light, medium and heavy-duty trucks, in 1987. This would indicate that GM is planning to increase its truck capacity.

Wall Street analysts — who praised GM for helping to reduce the growing capacity glut of the U.S. auto industry — said the giant automaker must reduce its capacity by 1 million cars by closing as many as five North American assembly plants in addition to the five it has already closed.

GM President Robert C. Stempel said GM wants

BOOM TOWN ON THE BORDER

Mexico's low labor costs attract huge parts business

By Stephen Downer
STAFF CORRESPONDENT

CIUDAD JUAREZ, Mexico — This city, located in the northern part of the rugged state of Chihuahua, was once the marketing center of a cotton-growing region.

Today, it is at the heart of the so-called in-bond program — known in Mexico as "maquiladora." It is a bustling city of one million or so, with modern shopping malls and virtually no unemployment.

Every day, millions of dollars worth of materials are shipped to Mexican border towns like this, assembled into automotive components with very low labor cost and re-exported to factories in the United States, including those of General Motors, Ford Motor Co. and Chrysler Motors. The in-bond products must be ex-

Assembling components in Mexico, where labor costs $1 an hour

K-car tumult: Part of pre-pact hype?

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Despite the muddle over Chrysler's plan to source K-cars in Mexico, there was relief that labor talks were back on track last week. It didn't seem to matter that — as one UAW local official said — "maybe it was all a smokescreen."

With Chrysler Corp. Chairman Lee Iacocca's announcement that K-car production will not be moved to Mexico unless the market warrants, both sides said they are optimistic a settlement can be reached this week.

"Maybe Chrysler wasn't really going to do it (move K-cars to Mexico) or it wasn't that serious, but it sure made all of them look good," one union official said.

"It's all politics, and the average worker gets whipsawed a little, but it's okay if no jobs are lost in the long run."

Both Chrysler's chief bargainer, Vice President Anthony St. John and, later, Iacocca argued that no

Dealers slap truck franchise

Arbitration clouds Nissan Diesel pact

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Nissan Diesel, which is planning to expand its truck range, is running into some opposition as it begins signing dealers to new franchise agreements.

The importer of medium-duty trucks began presenting two new franchise agreements to its 160 dealers last week, one replacing the present agreement and the other for a new light-duty vehicle.

In two days last week, the company signed 11 dealers to its new franchise agreements and presented them to 75 others who indicated an interest in signing up, said Rick Bliss, senior vice president of sales.

But some dealers are getting close legal scrutiny of the new contracts' fine print — especially their mandatory binding arbitration clauses — and at least one dealer has refused to sign while seeking his state's ruling on the legality of the contracts.

The contracts require mandatory binding arbitration for dealers in states that do not have any state franchising laws overriding it and also require that such dealers have all their disputes settled in Texas. Nissan Diesel's headquarters is in Irving, Texas.

Bill Ray, owner of Baird-Ray Nissan, Longwood, Fla., said he refused to sign the contract because of these provisions.

"The rest of the agreement reminds you of the late 1940s and early 1950s, it's so damn bad," Ray added.

"The worst thing is that it sets forth a whole list of items under which they can take your franchise away. They even go so far as to say that if you do not follow any of the written policy directives they send you, they can take the franchise," Ray added.

He said the contracts contain a new performance criteria which specify how many trucks a dealer must stock and sell in a given year.

Pat McGowan, the Nissan Diesel attorney who wrote the franchise

Solo 2: big brother of the Solo hinted for U.S.

Buick, Olds may sell Solo

Deal could mean Quad 4 for Panther sports car

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The mid-engine Solo sports car being developed by Panther Car Co. in the United Kingdom may be sold in the United States through selected Buick and Oldsmobile dealers.

A distribution arrangement under consideration by General Motors' Buick-Oldsmobile-Cadillac Group and Panther officials is part of a deal that would include fitting the Solo with Oldsmobile's new multi-valve Quad 4 engine, GM sources said.

The tie-up would also give GM a potentially strategic link with Panther's new South Korean parent, the Ssangyong industrial group.

Panther is supervising Ssangyong's passenger-vehicle engineering as well as developing its own Solo two-place sports car, which is now planned in two versions.

The 150-mph Cosworth-powered Solo 2, which was shown at the Frankfurt auto show last September, is scheduled to be in pilot production later this year. The £28,000 ($52,360) Solo 2 will be equipped with four-wheel drive, anti-lock braking and other high-tech features.

But Panther also is developing a far less expensive, rear-wheel-drive model, dubbed Solo 1, that now seems more likely to go to the United States.

Panther Chairman Young C. Kim said recently that the company's U.S. import plans depend in part on the strength of the British pound. The pound's recent rise in value has complicated plans for U.S. export of the Solo 2. The price is now projected at over $50,000 at the current rate of $1.90 to the pound, compared with $35,000 when planning for the vehicle began.

Solo 1, which is expected to cost about half as much and possibly be produced in Korea, is an alternative for the U.S. market.

Either way, Panther is looking for a U.S. engine supplier because Solo 2's 204-horsepower four-cylinder Cosworth powerplant cannot be economically certified for the United States.

There has been speculation about using Ford of Europe's 2.9-liter V-6, which is being federalized by Panther for the U.S. version of its 1930s-style Kallista roadster.

Kim has declined to talk about U.S. engine prospects for either Solo 1 or 2 models, saying only, "We are looking for an American engine."

But GM insiders say B-O-C may supply the 2.3-liter, 16-valve Quad 4 as part of a distribution package with Panther. The engine is said to be currently under evaluation by Panther engineers.

Panther is expected to need fewer than 100 dealers for the introduction of the Solo in the United States. The company currently has about 25 dealers selling the Kallista roadster in the United States.

U.S. volume projections for Solo depend on the version that is imported. The Solo 2 is pegged for an initial output of about 600 annually at the company's new factory in Harlow, north of London.

Kim said recently that the Solo 1 would be built in significantly higher volume and could be produced by Ssangyong in Korea.

The Solo 1 is expected to debut at the Frankfurt show in September 1989 or possibly at Geneva in March 1990. The small version was originally shown as a prototype at the 1984 Birmingham show. However, when Toyota introduced the MR2 two-seater at a comparable price, Panther shelved the baby Solo in favor of the higher-tech Solo 2.

Ssangyong, South Korea's seventh-largest industrial group, acquired 80 percent of Panther last year after earlier taking over Dong-A Motor, a limited-volume maker of 4x4 sport-utility and specialty vehicles in Korea.

EDS, GM settle differences, sign contracts

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Electronic Data Systems has signed five-year, fixed-price contracts with four more General Motors groups, thereby bringing 65 percent of its GM business under such contracts.

EDS announced last week it has signed contracts with GM's automotive components group, Chevrolet-Pontiac-Canada Group, service parts operations and Delco Electronics. EDS also obtained fixed-price contracts to provide a broad range of information-processing and communications services to both the GM customer sales and service staff and the industrial relations staff.

EDS said the contracts are important because they demonstrate EDS's commitment to GM, adding, "the partnership between EDS and GM is a strong one."

GM recently completed an audit of EDS to determine if its software company had mischarged for services, said Bruce Bredehoft, director of research for Minneapolis-based Sit Investment Associates, an institutional investment firm.

"The divisions had held up the contracts for a year," he said. "EDS passed the audit with flying colors, and now they can settle the contracts and get on with life. The signing of the contracts resolves something that had been ongoing even before Ross Perot left. It removes some of the rough edges between EDS and GM."

A GM spokesman said the corporation audits all of its divisions but he was unaware of any special audit of EDS.

The contracts have been a source of tension between the the parent and subsidiary, and between H. Ross Perot, EDS founder and former GM board member, and GM Chairman Roger B. Smith. When GM acquired EDS in 1984, Perot had insisted on the long-term, fixed-price contracts to strengthen the value of EDS stock — a special class of GM shares traded independently on the New York Stock Exchange as GM E Class .

The Texas billionaire pressed GM for the contracts again when the automaker bought out Perot and several of his longtime executives for about $750 million in December 1986.

An EDS spokesman said the company historically has fixed-price contracts with its customers and there was no reason to change the practice with GM.

EDS had hoped to get 75 percent of its $2.9 billion business with GM under long-term, fixed-price contracts. The latest agreements put 65 percent of its business with GM groups under those contracts. Others include the truck and bus group and General Motors Acceptance Corp.

The Buick-Oldsmobile-Cadillac Group will sign very soon, the EDS spokesman said. "We are very close," he said.

EDS said the reason it is taking so long to sign all the GM contracts is the mountainous workload.

Although sales to GM accounted for more than 75 percent of EDS' total revenues after the merger, that share is decreasing. "It is now at 60 percent and eventually it will be less than 50 percent," the spokesman said.

The remaining GM contracts will involve research and special projects that are difficult to put under long-term contracts, said the spokesman.

Bullish Big 3 raise schedules for 2nd quarter

By Kathy Barbaglia and Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTERS

Stronger-than-expected sales and reasonable inventory levels have prompted Detroit's Big 3 to add 237,855 cars to their second-quarter production schedules.

The increase is expected to boost second-quarter production to 2,044,792 units, up 5.93 percent from the 1,930,389 cars built in the second quarter of 1987.

In addition, both Ford Motor Co. and Chrysler Motors announced last week that they will increase their production schedules for the remainder of the year.

General Motors added 142,859 to its original second-quarter forecast, made in March, bringing its anticipated quarterly total to 974,206, fractionally higher than the 965,890 built in 1987.

Ford Motor Co. now plans to build 49,000 more cars than it originally scheduled. Output is expected to reach 523,000 cars, 7.00 percent more than the 488,803 built in the same period last year.

UPDATED SECOND QUARTER AUTO PRODUCTION
1988 forecast vs. 1987 actual

	1988	1987	% change
GM	974,206	965,890	+0.86
Ford	523,000	488,803	+7.00
Chrysler	332,000	287,903	+15.32
Honda	95,740	83,623	+14.50
NUMMI	40,300	50,068	−19.54
Nissan	32,086	33,258	−1.12
VW	15,200	20,824	−27.00
Mazda	31,480	—	—
Industry	2,044,792	1,930,389	+5.93

Ford also plans to boost its third-quarter car and truck production. It has slated 790,000 units, 32,000 more than the April 1 estimate of 758,000.

Chrysler's revised production schedule calls for the company to build 46,000 more cars than it had originally scheduled for the second quarter. Chrysler projects it will build 332,000 cars in the period, up 15.32 percent from the 287,903 units it produced in the second quarter of 1987.

In the second half of the year, Chrysler plans to produce 983,000 units in North America, up from a previously projected build of 873,000 units.

The increase includes 12,000 more Omni/Horizon America subcompacts, 57,000 more America K-cars and 23,000 more Fifth Avenues, Diplomats and Gran Furys.

Ford is boosting production to match the pace of its increasing market share, a spokesman said. Ford's share of the U.S. car market in the first quarter of 1988 was 21.80 percent, up from 20.00 percent in the 1987 period, and its truck share was 29.70 percent, up from 29.40 percent, he said.

The industry's car and truck sales during the first quarter of 1988 ran at an annualized rate of 16 million, well above Ford's original full-year estimate of 15 million.

David Healy, analyst with Drexel Burnham Lambert, said new-car orders indicate the current sales rate will be sustained and, in that light, production hikes don't appear to be a big risk.

Inventories of new cars from the Big 3 should remain reasonable through the second and third quarters, he said.

Detroit analyst Arvid Jouppi attributed the strong Big 3 sales and production rates to the weakness of the dollar against the yen, which helped the domestic makers against the Japanese. He also mentioned incentives and a strong market for lower-priced automobiles and trucks.

Mercedes loses bout to reduce 1984-1985 CAFE

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Mercedes-Benz of North America is considering an administrative challenge of NHTSA's decision not to lower corporate average fuel economy standards for the 1984 and 1985 model years.

Last week, the agency rejected Mercedes' petition, and a petition filed by General Motors for CAFE relief for the 1985 model year.

While GM officials were disappointed, their solution appears to hinge on changing the law.

Mercedes-Benz of North America was the first company to make the innovative appeal for retroactive relief for the 1984 and 1985 model years. GM followed, but only sought relief for the 1985 model year. Both automakers requested a CAFE level of 26 mpg or lower. The 1984 CAFE of 27.0 mpg was set by NHTSA; the 1985 CAFE of 27.5 mpg was set by Congress in the 1975 law.

"The CAFE law should have been reduced for 1985 to 26 mpg for the same reasons that DOT reduced it to that level for 1986, 1987 and 1988 — because the agency found that the 27.5 mpg standard exceeded the 'maximum feasible' level during that period," a GM spokesman said. "The negative effects of the law should be removed either by repeal or amendment, or by administrative action by DOT."

A Mercedes spokesman said the company is "reviewing the decision to see what — if any — further action might be appropriate."

Mercedes' request for the rollback came after NHTSA warned the company on May 4, 1987 that it had a shortfall of $5,509,400 for the 1985 model year.

NHTSA warned Mercedes that because of a Center for Auto Safety suit against the EPA over the CAFE adjustment number (created because EPA changed its 1975 test procedures that measure fuel economy), the exact amount might need to be refigured.

The center won in the lower court and the decision was upheld by a three-judge appellate panel. However, the matter — which involves an even more important issue of whether the center has standing to sue — still has not been settled because GM and other automakers as intervenors appealed to the full federal appeals court. Caught up in the standing to sue are numerous other CAFE cases.

Last August, Mercedes said it would not question the calculation of the 1985 civil penalty, but it would in a formal agency proceeding reserve the right to challenge assessment of any additional penalties because of the Center for Auto Safety suit against the EPA over the test-procedure-adjustment factor.

Mercedes said NHTSA's interpretation, based on what GM and Ford Motor Co. can achieve, is wrong because it fails to account for the rest of the industry, especially European and limited-line automakers that should be treated separately.

GM had been advised by NHTSA in May 1987 of its 1985 model year shortfall and its potential liability. But, unlike Mercedes, GM in June filed a three-year carryback plan that the agency approved in October.

That means GM's liability for CAFE civil penalties is zero. The penalty is $5 for each 0.1 mpg by which a company's fleet misses the standard, times the number of cars sold during the model year. While GM probably knew its 1988 sales would fall within the CAFE limits, it may well have petitioned NHTSA partly because Mercedes had done so. If the full appellate court for the District of Columbia circuit ruled against EPA in the CAFE adjustment case, GM would stand to gain.

NHTSA presented a lengthy explanation of its reasons for denying both companies any retroactive change in CAFE standards. It relied on the language of the law and its legislative intent, and its own reasoning for granting and denying rollbacks as well as references to litigation history.

Porsche, Jaguar paid $10 million in 1985 fines

WASHINGTON — The corporate average fuel economy standard of 27.5 mpg for the 1985 model year caused more turmoil for the auto companies than any other single year's standard, but only two auto companies have paid civil penalties.

Jaguar paid $8,799,010, and Porsche paid $1,253,580.

Mercedes-Benz owes $5,509,400 since NHTSA has denied its petition to roll back the 1985 standard to 26 mpg or less.

Companies that had faced possible civil penalties in the 1985 model year but have had them offset by either three-year carryforward or carryback plans include: BMW, $4,730,805; Ford domestic, $92,745,873; Ford imports, $1,503,625; General Motors domestic, $385,798,065; Peugeot, $2,397,405; Saab, $2,192,190; Volvo, $1,496,280.

In response to earlier petitions, NHTSA has rolled back CAFE standards for the 1986, 1987 and 1988 model years.

The 1989 CAFE standard automatically reverts to 27.5 mpg. But pending before NHTSA are a petition filed by the Automobile Importers of America to roll back the 1989 CAFE level to 26 mpg, and a petition filed by Mercedes-Benz of North America to roll it back to 22 mpg.

Lemon toll is $3 million in Mass.

By Helen Kahn
AUTOMOTIVE NEWS STAFF REPORTER

Unhappy car owners have won more than $3.2 million in arbitration cases against automakers in the 20 months the Massachusetts lemon law has been in effect.

The state's 1987 lemon law report also found that consumers are continuing to win almost two-thirds of the cases and that almost half the cases accepted for arbitration never reach a hearing because automakers have doubled their settlement offers.

Paula W. Gold, Massachusetts secretary of consumer affairs, said satisfying the customers early in the process is "exactly what the law envisioned" and "I can't think of better news to give consumers during National Consumers Week."

The state's Office of Consumer Affairs also produced a "lemon rating" for 1987. For the second year in a row, Yugo was fingered as the make with the highest rate of complaints — 19 times as many arbitration cases as its market share. Massachusetts said Yugo has 0.01 percent of the state's new-car sales but accounts for almost 2 percent of the arbitration cases.

The next four makes in the rating are: Alfa Romeo, Jaguar, AMC-Jeep-Renault and Peugeot.

Faring best in the state's lemon rating are Range Rover and Sterling with ratings of minus 100, meaning they had no cases accepted for arbitration.

The lemon rating shows the percentage of complaints accepted against a manufacturer compared to its market share. A company with a 20 percent market share might be expected to have 20 percent of the complaints. If, however, it had 30 percent of the complaints, it would have a lemon rating of plus 50. A 20 percent market share and 10 percent of the complaints would mean a lemon rating of minus 50.

Most-Troubled Cars

Manufacturer	Lemon Rating
1. Yugo	+1,825
2. Alfa Romeo	+1,315
3. Jaguar	+ 156
4. AMC/Jeep/Renault	+ 109
5. Peugeot	+ 101
6. General Motors	+ 60
7. Chrysler	– 2
8. Subaur	– 21
9. Porsche	– 23
10. Ford Motor Co.	– 28
11. Saab	– 32
12. Volvo	– 32
13. Mitsubishi	– 44
14. Volkswagen	– 46
15. Hyundai	– 45
16. Audi	– 49
17. Isuzu	– 54
18. Nissan	– 55
19. BMW	– 69
20. Mazda	– 70
21. Toyota	– 70
22. Suzuki	– 76
23. Mercedes Benz	– 78
24. Honda	– 89
25. Sterling	– 100
26. Range Rover	– 100

Gold noted the General Motors rating is "quite high" (plus 60) compared with that of Chrysler (minus 2) or of Ford (minus 28).

According to Gold, a high lemon rating means that either a company is producing more than its share of allegedly defective cars or is not settling as many cases before arbitration, or both.

The 1987 report from the state also shows that after being accepted for arbitration, GM settled 41 percent of its cases; Ford, 58 percent; and Chrysler, 74 percent.

During 1987, Massachusetts' arbitration program received 1,043 requests for arbitration — an increase of 15 percent over 1986 — and accepted 786 of them. Consumers won 64 percent of the cases; the automakers won 36 percent.

Only about 4 percent of the consumer victories were appealed by the manufacturers. Gold said Ford drastically reduced the number of cases it appealed from 40 percent in 1986 to 7 percent in 1987.

Massachusetts has one of the toughest of more then 40 state lemon laws. It mandates refund or replacement of new vehicles that remain substantially impaired in performance, value or safety after three repair attempts for the same defect or are out of service for 15 business days for any combination of defects.

Will Firestone ouster start trend?

By Edd Pritchard
and Charles M. Thomas
CRAIN NEWS SERVICE

General Motors' decision to drop Chicago-based Firestone Tire & Rubber as a supplier of tires for its cars and light trucks produced in North America has industry analysts predicting a major reshuffle over the next two years as tire makers realign themselves for carmakers' business.

A GM spokeswoman declined to give specific reasons for dropping Firestone, which supplies 20 percent of GM's tires, other than to say that the automaker thought it was no longer viable to operate with five tire suppliers. "It was a very difficult decision," she said.

The Firestone cutback is slated to begin in July and continue for two years.

Securities analysts who follow the tire industry believe Groupe Michelin will gain the most from Firestone's loss. Also benefiting will be Uniroyal Goodrich Tire Co., which might start pushing its Goodrich brands for original equipment use.

Goodyear and Continental A.G.'s General Tire subsidiary also will continue to supply GM.

Firestone, which is being acquired by Tokyo-based Bridgestone Corp., said GM accounts for roughly 20 percent of its North American tire production.

However, the tire maker's biggest customer is Ford Motor Co. at roughly 40 percent, say analysts. Firestone also has a foothold with several Japanese automakers including Nissan and Toyota.

The GM spokeswoman said the move to drop Firestone had no connection with the planned acquisition. She said Bridgestone will continue to supply the Japanese-built Chevrolet Sprint and Spectrum and GM's European models. Firestone also continues to be sole supplier of tires for Saturn cars, slated to go into production in 1990.

But some analysts in Japan speculated that the move was a negative reaction toward Japanese companies. One analyst wondered why GM didn't delay its decision until after the Bridgestone-Firestone takeover and give the Japanese tire maker a chance to make a counter-offer.

Another Japanese analyst, however, argued that price is the primary reason behind GM's decision, noting that Bridgestone is not known for reducing prices.

John J. Nevin, Firestone chairman and chief executive officer, said Firestone was surprised and disappointed by the GM decision. He said Firestone is very confident it can find other markets and that profits will not be affected.

Bridgestone has said the action will have no effect on the proposed acquisition. Ford said it has no plans to change its supplier relationship with Firestone.

GM said it has informed its other tire suppliers that it will increase their business, but "nothing has been finalized as to how much of an increase."

Industry analyst Donald F. DeScenza of New York-based Nomura Securities said France's Michelin could be the big winner in the shuffle.

"GM could decide that its four tire suppliers should have between 20 and 30 percent of its tire business, which would mean a big boost for Michelin that has only 4 percent now," he said.

DeScenza said production capacity at all of the tire makers is limited, so that they would have to reduce sales to other automakers to take on additional GM business. Firestone may pick up additional business at Chrysler if GM forces Goodyear to reduce its Chrysler business.

"In the end, everybody could have the same amount of business, just at different companies," he said.

DeScenza also suggested that as automakers bring suppliers into the design of future products earlier, the automakers will insist on protecting their secrecy.

"Would you want a company that supplies 40 percent of its tires to your arch-rival, Ford, and the Japanese, who have beaten you up so badly, in on your forward-product planning?" he asked.

Analyst Harry Millis of Cleveland-based McDonald & Co., agreed.

"GM must have felt uncomfortable developing specifications on products coming out three and four years down the road with a company that is so closely tied with the Japanese automakers," he said. "It's not the official reason, but it was on the back of someone's mind there."

He, too, said Michelin stands to make the biggest gain at GM, and that Firestone has been overweighted in the OEM market, causing it to shortchange the replacement market.

"It will relieve Firestone of the pressure to expand and build a plant," he said.

Feast appointed editor of AutoWeek

DETROIT — Veteran auto journalist Richard Feast has been named editor of AutoWeek, the only U.S. consumer automotive newsweekly.

Feast, until recently international editor at Automotive News, is former editor of Autosport, the British motorsports weekly, and What Car?, the largest automotive consumer magazine in England. He also served seven years as European editor in London for Automotive News.

AutoWeek and Automotive News are published by Crain Communications. AutoWeek has the largest circulation of any of the 25 publications in the Crain group.

AutoWeek publisher Leon Mandel said, "I'm delighted and AutoWeek is fortunate to have an editor of international reputation and wide experience."

Feast replaces George Levy, who resigned last week to pursue personal interests after a four-year tenure as editor of AutoWeek.

Van lists show top players

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — In the highly competitive van conversion business, some newer, more aggressive companies have displaced older, more established companies at the top.

For an up-to-date check on the hottest current competitors, Automotive News put together lists of the top van conversion pool companies for each of the major manufacturers.

The lists for Chevrolet and Dodge rank companies in order of their volume and, in the case of Dodge, their retail turn rates. For Ford and GMC, the companies are unranked, though Starcraft is the top GMC van converter and Bivouac is the top Ford account.

The lists were compiled from careful cross-checking of converters and auto company sources.

Some of the companies are a surprise, either because they have come a long way in a short time or because they have received little public attention despite prominence in the field.

As the two lists for Dodge indicate, a company's volume level doesn't always predict how fast its vans will sell at retail.

The point is worth important to dealers, interested in fast inventory turnover, and to converters. As in the case of Dodge, the speed with which a company's units sell is a major determinate in how many chassis it will receive in the future.

This gives smaller converters a chance to receive increasing more chassis, as long as they continue to sell well at retail.

Manufacturers do not compare turn rates of converters directly. Rather, they take an average rate for retail turn among their pool companies and compare individual firms against that average.

GMC uses an average of the days' supply of conversions in the field to measure an individual converters' performance.

GMC is coming on very strong in the van conversion market, according to industry sources.

It is no longer a stepchild of Chevrolet, despite having the same chassis products, and it will be getting an increased allocation of chassis from General Motors because of its performance.

HIGHEST VOLUME VAN POOL COMPANY CONVERTERS

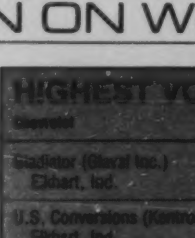
TraTech adds full-sized van, luxury mini

TRUCKING TRENDS



JOSEPH BOHN

TraTech, celebrating its 10th anniversary next year, is offering an all-new full-sized Centennial van conversion model and a new luxury General Motors minivan.

The company also announced that it appointed Dick Nesbitt product designer, and William L. Maloney president.

Officials noted they have sold more than 40,000 van conversions since startup in 1979 and that the company was Chevrolet's largest bailment pool converter in 1987.

TraTech recently named Jones, Pointer, Winn Inc. as its advertising and public relations firm and is developing an aggressive co-op ad program for its major dealers.

TraTech, based in Fort Worth, Texas, is a subsidiary of Neoax Inc., a large specialty-vehicle manufacturer of stretch limousines, conversion vans and funeral coaches.

Gulf Stream additions

Gulf Stream Coach Inc., Nappanee, Ind., has introduced a companion package for its Monogram Conversions' Monocet model. It is called the Exocet.

The package is priced in the low- to mid-range category but offers a number of extras, such as twin headphone sets for the van's second AM/FM/stereo cassette radio system and a full-width, overhead lighted console with an electronic function monitoring panel and electronic compass.

George Mahalick, Monogram general manager, said the high-tech panels are new to the van conversion market and offer information such as a door being ajar.

The package also includes newly designed luxury seats with contoured thigh and head-support systems, a raised sport-top roof, rear, under-sofa air conditioning and other features.

Kudos to Compliment

Phil Barger, who joined Compliment Vans, Comanche, Iowa, as president last October, said the company received good response to a Euro Vista luxury van with European styling that it introduced at the National Automobile Dealers Association convention in February.

During the past six months, the company has introduced 10 new products, additional product upgrades and several marketing tools for dealers.

The company recently introduced conversions for two- and four-wheel-drive Suburbans, and it plans to introduce a mini version of the Euro Vista and restyled versions of its Buena Vista, Ultra Vista and Vista Silver models.

Compliment, a Neoax company, has been in the conversion business since 1963 and has been dealing exclusively with van conversions since 1973.

It has manufacturing plants in Camanche, Iowa, and Pueblo, Colo., and claims more than 600 car dealers in its national network.

Name change
Southern Coach of Greensboro, N.C., plans to market conversion vans and trucks under the new name of Southern Coach of America to reflect the company's growth. The firm's name change and expansion began with the repurchase of all its outstanding stock by key management last fall. Southern distributes products to 25 states east of the Mississippi River. This Ford conversion is one example.

Wholesale shipments highest since 1977

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RV wholesale shipments increased 7.52 percent in February, and shipments for the first two months of 1988 were the highest since 1977.

Manufacturers shipped 34,300 units in February, up from 31,900 last year. During January and February, 65,100 were shipped, a 3.17 percent rise over 63,100 in 1987, according to the Recreation Vehicle Industry Association.

The two-month total represents a seasonally adjusted annual rate of more than 440,000 units, the best since 1977, RVIA said.

The Index of Consumer Sentiment, as measured by the University of Michigan's Survey Research Center, stood at 91.6 in February, up slightly from the previous month and substantially ahead of November's 83.1.

RV retail sales also moved ahead in February, particularly for travel trailers and type A motor homes, RVIA said.

Van conversions were a major factor in the industry's upsurge. Manufacturers shipped 16,500 van conversions in February, 13.01 percent more than a year ago.

For January and February, manufacturers shipped 30,500 van conversions, 6.27 percent more than a year earlier.

Van shipments by Detroit manufacturers to converters also increased in February, reversing the previous month's decline and bringing two-month shipments closer to the 1987 level.

The four major domestic manufacturers shipped 17,000 vans with the seat-delete option to converters in February, up 8.28 percent from last year.

For the first two months of this year, manufacturers shipped 29,000 vans with the seat-delete option, 4.29 percent fewer than the 30,300 of like 1987.

For the two-month period, compact-van shipments by Detroit automakers to converters totaled 8,200, up 49.09 percent from 5,500 last year.

Full-sized van shipments by Detroit makers totaled 20,800 units in January and February, off 16.13 percent from 24,800 a year earlier.

ported; they cannot be sold in Mexico.

The simple reason for the booming cross-border trade is money.

Labor costs in the United States are $12 per hour on average and factory operating costs are $24 an hour, according to Chuck Dodson, chairman of Elamex, which has offered contract assembly services in Ciudad Juarez for 15 years. In Mexico, he said, labor costs are $1 an hour and operating costs are $6.28.

"With one operator in Mexico doing assembly work, you save $43,000 per year," he said. "With 100 workers, your savings are $4.3 million."

The added attraction for the U.S. companies is that, under the provisions of U.S. Customs Codes 806 and 807, there is no U.S. import duty on the portion of the finished product that originated in the United States.

But the main attractions of in-bond remain: low operating costs, totally non-union labor and the fact that foreign investors are allowed to own 100 percent of an enterprise. Businesses other than in-bond must by law be 51 percent in Mexican hands.

GM, Ford and Chrysler are important players in fact as they are in the manufacture of cars in Mexico for sale in the United States.

The trade in built-up vehicle imports from Mexico has leapt from 13,650 worth $69 million in 1985 to 126,300 worth $1.18 billion last year, according to U.S. Commerce Department figures.

The automakers and companies like Essex International already have about 42 so-called in-bond plants operating south of the 2,000-mile-long U.S.-Mexico border.

The auto plants employ about 42,000 persons. About 300,000 persons work in Mexico's 1,200 in-bond plants.

The number is likely to increase. But the auto companies are loath to discuss their plans. Their reticence apparently springs from the U.S. unions' growing disenchantment with the policy of moving more and more assembly to Mexico.

"Runaway shops that once padlocked their doors in the industrial Midwest and Northeast and reopened in the Sunbelt, seeking low wages and no unions, today are shutting down across America and moving to Taiwan, Singapore, Mexico and elsewhere," UAW President Owen Bieber said in 1986.

In a recent case, workers at Chrysler Motors' Acustar Detroit trim plant, which Chrysler said it plans to close, said they believe a large percentage of their plant's work is headed to a Chrysler plant in Mexico.

The union has pushed for legislation which, it says, must prevent corporations from exploiting low-wage workers in Mexico and elsewhere at the expense of American jobs. The UAW's magazine, "Solidarity," has featured articles on the struggle of Mexican autoworkers, who are paid $30 for a 44-hour week.

The UAW maintains it is economically unhealthy in the long run for the automakers to move their capital to countries where workers cannot afford to buy the products they manufacture.

In-bond industry supporters, like Donald Michie of the University of Texas at El Paso, said the unions' fears are unwarranted. Nevertheless, Automotive News' interest in looking inside several auto plants in Ciudad Juarez, which lies across the Rio Grande from El Paso, Texas, was referred to head offices in the United States. In every case, cooperation was denied.

GM de Mexico mentions its maquiladoras in a new public relations video, yet has failed to respond to written and oral requests for details.

Michie: Without the in-bond program, it would be difficult for American industry to offer poducts at a price comparable to those offered by foreign competitors.

According to figures compiled by the Bermudez industrial development group in Ciudad Juarez, the city had 185 in-bond plants in June 1987, an eighth of them assembling for the auto industry. They employed 96,405 people. That was 33.2 percent of the 290,743 in-bond employees in the whole of Mexico at the time.

Tijuana, in the state of Baja California Norte, close to San Diego, was the second largest employer. Its 35,762 workers (in 281 plants) represented 12.3 percent of the total.

Of the 240 plants in Ciudad Juarez today, according to the Bermudez group, about 25 assemble auto parts and components. GM-related companies have 12, Ford seven and Chrysler (Acustar) two. In addition, another five plants or so assemble products, mainly wire harnesses, for GM companies.

The statistics on the auto companies' in-bond presence in Mexico come from the 1987 Directory of In-bond Plants (Maquiladoras) in Mexico, published by Mexico Communications of El Paso, Texas, and sold for $115.

According to Wayne McClintock, Mexico Communications' chief executive, the maquiladora industry

Free-trade pact eyed for Mexico

WASHINGTON — Reagan administration officials who pushed hard for a free-trade agreement with Canada are also interested in similar negotiations with the government of Mexico.

"Within the administration, there is support for expanding the free-trade agreement to all of North America," said an auto industry source who helped negotiate the U.S.-Canada pact. "There is also the realization bilateral talks with Mexico would be more controversial than the talks with Canada."

U.S. Trade Representative Clayton Yeutter recently told the Senate Finance Committee that serious free-trade negotiations with Mexico will not be undertaken this year because his office does not want to "tie the hands" of the next administration, and because his staff already has its hands full. Yeutter did express general support, however, for a free-trade agreement with Mexico at some future time.

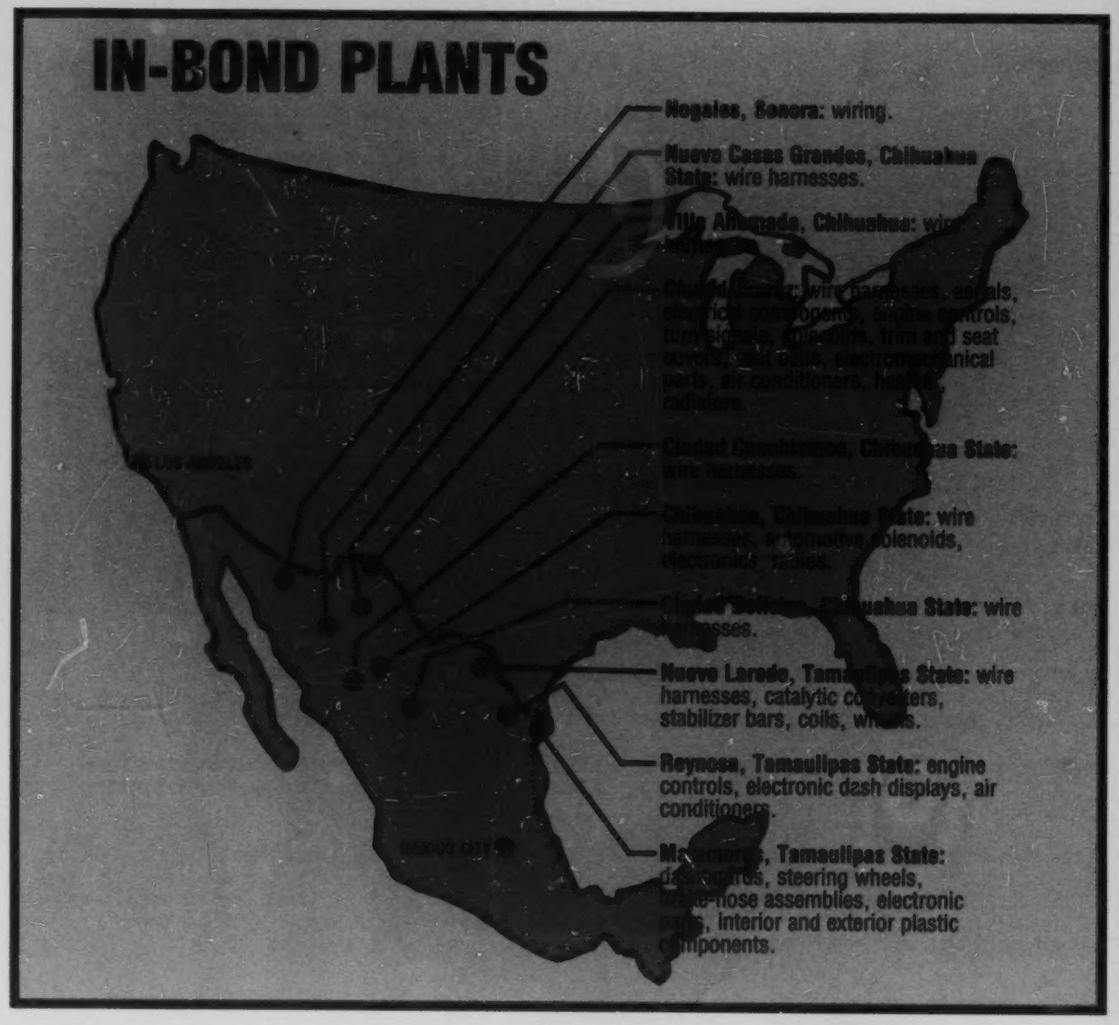
The U.S. auto industry is paying close attention to those remarks, according to trade lawyers for vehicle manufacturers.

"We have increased our investments in Mexico, but we have done so under Mexico's existing trade and financial controls," one car company official in Washington said. He added, "Lifting restrictions would be of some benefit to us, but there is concern that this would be of more benefit to new investors. It is a situation not unlike that we faced in the Canadian negotiations."

The industry representative who helped negotiate the U.S.-Canadian agreement said, "Mexico has taken several important steps in recent years that signal a different approach to international trade.

"For instance, Mexico has joined GATT (General Agreement on Tariffs and Trade). There is a movement toward more openness. I believe there is an element of fear in Mexico that excessive controls are causing Mexico to loose out on foreign investment."

— Geoff Sundstrom



IN-BOND PLANTS
Nogales, Sonora: wiring.
Nuevo Casas Grandes, Chihuahua State: wire harnesses.
Ciudad Juarez: wire harnesses, aerials, electrical components, engine controls, turn signals, solenoids, trim and seat covers, air coils, electromechanical parts, air conditioners, heaters, radiators.
Ciudad Chihuahua State: wire harnesses.
Chihuahua State: wire harnesses, automotive solenoids, electronics, radios.
State: wire harnesses.
Nuevo Laredo, Tamaulipas State: wire harnesses, catalytic converters, stabilizer bars, coils, wheels.
Reynosa, Tamaulipas State: engine controls, electronic dash displays, air conditioners.
Tamaulipas State: steering wheels, front-nose assemblies, electronic parts, interior and exterior plastic components.

in Mexico is growing by 25 percent a year.

"By the end of this year, there will be more than 1,500 of these plants," he said. "The Mexican government intends having one million-plus in-bond workers by the end of the century."

The Bermudez group, on the other hand, predicts growth of between 11 and 16 percent a year for the next five years. "The crystal ball muddies up after that," said William L. Mitchell, the Bermudez group's marketing vice president.

American industry guru Peter Drucker is on record as saying that 10 million U.S. jobs will go offshore by the turn of the century. Mexico, which would like to attract five million of those, is realistic and has set a goal of one million-plus, according to McClintock.

"I bet you that within five years, the automotive industry's in-bond plants in Mexico will be highly automated where the highest wage is paid," he said.

GM was the first major automaker to join the maquiladora program. In 1978, its Packard Electric Division established Conductores y Componentes Electricos de Juarez in Ciudad Juarez to make wire harnesses. That same year, GM's Inland Division founded Vestiduras Fronterizas in the city. About 1,000 employees produce about six million seat covers and interior trim items a year for such vehicles as the Camaro.

Since 1978, GM's Delco Products, Delco Remy, Delco Electronics, Fisher-Guide, Rochester Products and Packard Electric divisions have set up two dozen more in-bond plants in Mexico.

Wire harnesses, solenoids, car radio aerials, engine controls, dashboards, steering wheels and interior and exterior plastic automotive components are part of the GM product lines at the plants.

Ciudad Juarez is attractive to investors who have joined the in-bond program. It has three bridges that link it to the United States. Shipping delays are thus kept to a minimum.

El Paso is considered by many to be the best jumping-off point from the Mexican border to the rest of the United States. The Bermudez group said that products assembled in Ciudad Juarez are transported by road and air to 1,200 U.S. towns and cities in 49 states.

Elamex's Dodson, whose company is understood to do assembly work for Packard Electric (although he was tight-lipped when asked about it), said that such a saving does not necessarily represent profit. "It may simply help a company reduce a product's selling price and remain competitive," he said.

Elamex employs some 2,600 people in nine plants, eight in Ciudad Juarez and one in Guadalajara, Mexico's second city. Dodson

McClintock: "The Mexican government intends having one million-plus in-bond workers by the end of the century."

and his fellow executives are planning to build four more plants, three in Ciudad Juarez and one in Nuevo Laredo.

"Five years from now, I expect to have 5,000 people working for us," he said.

"In our opinion, it took too long for GM to react to this (in-bond) program," said Cesar Alarcon, director of the Maquiladora Association in Ciudad Juarez. "We had been working on them since 1973 or 1974. They didn't make up their minds until 1978. But since then, they have grown quickly."

Alarcon said that the 240 in-bond plants in Ciudad Juarez spent $570 million on wages and operating costs last year, $82 million more than in 1986 and $255 million more than in 1983.

In-bond workers earn the minimum wage, 8,000 pesos ($3.47) for an eight-hour day, which works out at 1,000 pesos (43 cents) per hour. But with fringe benefits the average worker's wage is worth 70 cents an hour or more, Alarcon said.

He said that the national minimum wage is set by the federal government after consultations with the private sector.

"We recognize that the minimum wage is not enough to feed the average family well," he said. "But it is better to have these (in-bond) jobs than to have nothing. The unemployment situation in Mexico is bad."

Ten years ago, he said, Ciudad Juarez's population was about 500,000. Since then, the factories have attracted that many again from other states of the republic.

"We have had a lot of immigration from (northern) states like Coahuila, Zacatecas and Durango," said Alarcon. "Now they are starting to come in from (southern) states like Chiapas and Oaxaca, as well as from Mexico City."

According to Alarcon, the U.S. government's crackdown on illegal immigration into the United States in the past year has benefited the Mexican in-bond industry.

"If workers had the choice, we would be struggling to find people to work in the maquiladoras," he said.

Working conditions at the plants, in Ciudad Juarez at least, appear to be good. This reporter entered one Elamex plant, which manufactures circuit boards, and found it clean, bright and cool.

"Elamex doesn't run sweat shops," said Dodson, a Harvard Business School graduate. "Working conditions are excellent. Our plants are well lit and air-conditioned. Why? Not because it makes you feel good but because, when you have a good environment, people work well.

"We try to introduce the newest technology available. We have automatic assembly operations. This is not a backward nation. It is very progressive."

He added, "Reporters ask me sometimes if I am still exploiting Mexican workers. As far as I know, all the maquiladoras pay more than the minimum wage."

Alarcon: "We recognize that the minimum wage is not enough to feed the average family well. But it is better to have these (in-bond) jobs than to have nothing. The unemployment situation in Mexico is bad."

Michie, who is director of the Institute for Manufacturing and Materials Management at the University of Texas at El Paso, said, "There is no exploitation of the Mexican worker in the maquiladora industry. You don't find a better wage/benefit package within the Mexican economy and yet by American standards the wage rate is low. You can't impose American standards on Mexico."

They provide about 40 percent of the jobs in the city, where unemployment is nil, he said, compared with the national unemployment rate of 14 percent.

Ciudad Juarez's mayor, Jaime Bermudez Cuaron, a leading figure in the in-bond industry's development, said, "The average maquiladora worker's income is almost twice the minimum wage in Mexico."

Dodson said that Elamex workers put in a 10-hour day, five days a week. Production starts at 6.30 a.m. and finishes at 4.30 p.m. Workers get a 30-minute lunch break and two coffee breaks of 15 minutes each. "There is an 80 percent subsidy on the lunch we sell at our factories," he said.

According to Alarcon, it can take a company as little as four weeks to establish an in-bond plant in Ciudad Juarez, compared with a year a decade ago. "There is very little red tape," he said.

A plant built to a company's specifications will take six to eight months to construct," he said.

"Mexico ought to be far more important (as an in-bond center) than Korea or Tai-

see MEXICO, page 24

MEXICO

FROM PAGE 22

wan," Dodson said, "First of all, because of its proximity to the United States and second, because it has a large labor force. The labor force is very trainable, very intelligent, very good. I have no reservations about it."

The Bermudez group is the largest of about six industrial developers in Ciudad Juarez and employs between 400 and 500 people.

According to group president Sergio Bermudez, the mayor's son, the group sells industrial real estate, builds plants and contracts manufacturers. It has developed four industrial parks in Ciudad Juarez.

The group's founder, Mayor Bermudez Cuaron, is considered by many to be the "godfather" of the Mexican in-bond industry. Adolfo Lopez Mateos, Mexico's president from 1958 to 1964, named Bermudez Cuaron's uncle, Antonio J. Bermudez, a former director of state oil monopoly Pemex, to head a program aimed at improving the Mexican border towns' appearance in the early 1960s.

"A lot of work was done to improve the town's appearance," said Bermudez Cuaron, who was elected mayor in 1986. "But then a group of us started talking about their economic development."
